PREFACE TO THE FOURTH EDITION.

THIS is the first thoroughly revised edition. Of the criticisms of this work, I have been able to accept and embody especially those of Professor A. L. Ripley, of Yale College, and of Professor Geo. O. Curme, of Cornell College (Iowa), to both of whom I express my sincere thanks. The strictures made upon my classification of nouns and upon the standard of pronunciation I do not think well founded. classification of nouns is historical and scientific. If the best standard should finally settle upon kh, jh (§ 375) for g and not upon k (surd stop), nothing would please me "Hard" a except after a is a bitter pill for a North German. To the objection that the work is too concise, let me say that I have tried to make it concise. The Accidence and Part II, were once as large again as they are now. The first contained too much syntax, until, following the excellent method of the French grammarians, I resolved to separate entirely inflection and syntax. I have in this edition transferred several paragraphs from Part I. to Part II. Part II. is a historical foundation broad enough for Part I. to rest upon. It is not intended to be a minute historical reference-grammar for teachers and specialists only.

The word-index has been very much enlarged. With the demand for the traditional list of irregular verbs, "which no

grammar should be without," I have complied so far as to include all the irregular verbs in the word-index (see introductory remarks on p. 271). I wanted to make the G.-Eng. vocabulary cover all the sentences and words, but found that it would swell the book too much. It is complete only for Part I. (see p. 271).

The list of reference-books has been omitted at the suggestion of Prof. Ripley.

It may not be out of place to enumerate the distinguishing features of the grammar: (1) the complete separation of inflection and syntax; (2) the historical treatment of the latter, that should make it a welcome aid in the reading of 16th, 17th, and 18th century Literature; (3) the attempt to treat German grammar with regard to the present stage of Germanic philology; (4) the scientific analysis of German sounds and accent.

THE ATTHOR

PREFACE TO THE SIXTH EDITION.

I have finally complied fully with the demand for a separate List of Strong and Irregular Verbs, and have also added more extensive inflections of substantives, adjectives, and verbs, to be used in connection with the first section of the grammar.

H. C. G. B.

Clinton, N. Y., April, 1893.

PRONUNCIATION.

The German sounds are here only very inaccurately represented by English words and letters. A full analysis is found in the second part p. 160. The following description, with a few key-words, will suffice for the beginner; but it is meant to be only a popular description. As soon as the student begins to read, he ought to study Part II., p. 160-174.

- 3. ā as in Eng. father: Bater, Aal, Zahl. ă, not in Eng., but similar to Scotch a as in Sc. hand, land: Mann,
- **4.** $\mathfrak{b} = \text{Eng. } b$, but surd (=p) at the end of words: Bube, Daube, Dieb, Laub.
 - 5. c, d = Eng. k: Carl, Bade, Bader.
- 6. H, not in Eng., but in Scotch as in lock. A single guttural sound. Two kinds: 1. Palatal (forward) after palatal vowels, viz.: e, i, ö, ü, ä, ei, eu, and in the suffix othen, e.g., ich, Wächter, Blech, möchte, euch, Gerücht, weich, Mäcchen, Mamachen. 2. Backguttural after the other vowels, a, v, u, au, e.g., ach, Dach, Loch, Buch, Bauch (betrog in N. G.). In Charirei'tag and in foreign words = k: Chara'tter, Chor; also like sch in foreign words: Champa'gner, change'ren, Chance.
 - 7. b = Eng. d, but surd (= t) finally: ou, tody, Bab, lub.
- 8. c, long, similar to Eng. a, ay, as in pay, pate, rate; short, like Eng. ě, as in met, ē: gehn, Beet, wert; ě: recht, Wette.
 - 9. f = Eng. f: hoffen, hafen, führen, Flagge.
- **10.** $\mathfrak{g} = \text{Eng. } g$, but surd (=k) finally: glauben, plagen, graben; but \mathfrak{Tag} , \mathfrak{Zug} , fragte, trug, \mathfrak{Balg} .
- 11. $\mathfrak{h} = \operatorname{Eng}$. h if it stands initially: Hund, Hose, Hase. After a vowel and after a t it is silent: such, show, show, That, That. See the dropping of \mathfrak{h} , p. 159.
 - 12. i similar to Eng. i: bin, finde, bringe.
 i or ic = Eng. ee in feet: vicr, siegen, mir, dir, Igel, Biber.

- 13. j similar to Eng. J: jung, jagen, Jage.
- 14. f, d = Eng. k: Rate, Bade, Saten.
- 15. I similar to Eng. 1: Lage, lachen, wohl, Saal, bald.
- 16. m = Eng. m : Mold, Sann, idwimmen.
- 17. n = Eng. n. 1. Initially, finally, and before a derection of the stem-syllable. In the stem-syllable, efore t, and combined with g like Eng. ng in sing, singer niang, Sanger, Hinger, Bant, sensen, blinken; but an see formmen, negebouer.

t

r

- 18. $\bar{\mathfrak{o}} = \text{Eng. } o, oa, \text{ in } hold, foal: Bote, Bote, tot, rot, Love, <math>\mathfrak{o}$, Then (clay). $\check{\mathfrak{o}}$ not in Eng., but short Sc. o; c. g.: Broke, \mathfrak{o} , Stod, Set (not at all like Eng. slock, rock, but see p. 164).
- 19. $\psi =
 \text{like Eng. } p:
 \text{ plagen, Kappe, Trapper, Galo'pp.}
 \text{pf} = p + f:
 \text{ Piund, Rapf, Sumpf, tapfer. In Eng. only in } t
 \text{ cidental juxtaposition, } e. g., "a cap for him," "stop for me."
 ph in foreign words only = <math>f$: Philologie', Telegra'ph.
- **20.** \mathfrak{q} always followed by \mathfrak{u} , similar to Eng. $q\mathfrak{u}$: \mathfrak{quer} , \mathfrak{taft} , $\mathfrak{L}\mathfrak{uart}$, bequem.
- 21. r unlike Eng. r. 1. Trilled: Regen, Rache, fern, Furt, ht. This is the standard r. 2. Uvular or guttural in N. G., y much like the guttural ch, but sonant.
- 12. j, jj, s, jj = Eng. surd s. Haus, Mäus, Waiser, Huß, se, sein; but initially and after a vowel it begins surd and is sonant, as in N. and M. G. Standard unsettled. But p. 175.
- 3. ich = Eng. sh (surd): ichiden, ichenten, haichen, Schlange.
- 4. It, sp = soft, soft initially in the standard pronunciaand in S. and M. G. But in the middle and at the end ords, in N. G. also at the beginning of words = Eng. st, soft, soft Strase, Stubl, Spaß, sprichen; st, sp: hast, bersten, Burst, Bespe, haspeln. N. G.: Spieß, Stock.

- 25. t, th = Eng. t: bat, batte, That, Naht.
- **26.** $\tilde{\mathbf{u}} = \text{Eng. oo in too: Hut, But, Blume, Buch, Buhle. <math>\tilde{\mathbf{i}} = \text{Eng. } u \text{ in } put: \text{Butter, ftuhen, Gulden.}$
- 27. $\mathfrak{v} = \text{Eug. } f$ in German words: Bater, Frevel, viel. $\mathfrak{v} = f$ forman \mathfrak{w} in foreign words: Bita'r, vindizie'ren, Bata'nz.
- 28. w like Eng. v dento-labial: Wetter, Wasser, warnen. After sch labio-labial like u after q, but not quite like Eng. w: Schwester, Schwesse, Schwesse. But see p. 170.
- **29.** \mathbf{r} in foreign words and $\mathbf{h}\mathbf{s}$, $\mathbf{h}\mathbf{j} = \mathrm{Eng.}\ x$: Alexanter, Wads, Fuchs, Füchstn, sechs.
 - $\eta = \ddot{\mathbf{u}}$, which see.
- **30.** \mathfrak{z} , $\mathfrak{k}=\mathrm{Eng.}$ ts, as in cats, rats: Junge, Zeug, Warze, Müße, Pfüße.

c in foreign words before e, i, y, $\ddot{a} = ts$: cerebral, Căju'r, Cifa'de, Cyflo'p; but the spelling is unsettled: 3iga'rre, 3entuer, 3enju'r.

31. Modified Vowels (Umlauts).

a long = Eng. ai in fair : Bater, Rater, ftablern.

ä short = Eng. and Ger. č : Sante, Bante, fallen.

ö not in Eng. It has the lip-position of o, the tongue-position of c: long in toje, lösen, Herzöge; short in Böller, Zölle, Gerölle.

ü not in Eng. It has the lip-position of u, the tongueposition of i: long in Mühle, Bücher, Küchlein; short in Müller, Sünde, Büttel.

 $\mathfrak{y} = \ddot{\mathfrak{u}}, \text{ as in Chain, Charciffe, only in foreign words.}$

32. Diphthongs.

ai (rare) and ei = Eng. i in find: Raifer, Mai, leise, weiß, bleiben. au - Eng. ou in house: blau, Haus, Maus.

äu and eu similar to Eng. oi in exploit: Mäuse, läuten, Beute beute.

Quantity of Vowels.

- 33. Vowels are long in an open syllable, e. g., Tasges, sgen, Büscher. They are also indicated: 1. By doubling, but aly in the case of a, e, v: Saal, Seele, Movs. 2. By h after is vowel and after t: Hahn, Ohm, ihn, Thran, Thor. 3. By e fter i: lieh, Tier, viel. 4. a and e are generally long before rt, rd: war, rar, ter, wert, werden, 3art, Pferd. Short in fertig < Fahrt), Warte, Scharte, Herz, Schmerz.
- 34. The vowels are short before more than one consonant: andeln, bergen, Nacht, Welübre, haffen.
- 35. § counts as a single consonant; it becomes § medially (see Rules," § 12), e.g., Fluße Hustes, Blüße; fließen Hust, gestoffen. The owel remains long before inflectional endings, e.g., token, lubß, getobt out gehabt, gemecht; also in a closed syllable, when the stem-vowel stands a an open syllable under inflection, e.g., Tag, Tagges; Bug, Burges. But see p. 175.

Since of cannot be doubled, there is no telling the quantity of the preeding vowel from the mere looks of the word: e.g., long in Bud ludged; Tud — Tudged; brad — bradgen; but short in Bad — Badged; ladgen, adden. As a rule, shortness may be expected.

- 36. The division into syllables differs somewhat from the English ustom. The "Rules" § 26 show how words are divided at the end of a ne. The following examples will illustrate sufficiently: hasben, suchen, sector, ver irren, ge irrt, Basser, Strasse, lö schen, ro ter, Vinsger (but see 17), he re, Beisen, hisze, Karspfen, best
- 37. German orthography is now regulated by the government, and the student ho is to write German should provide himself with the official, Regeln und Wörterverschichs für die beutsche Rechtscheung in den preußischen Schulen. Berlin. It is a small invenient guide of 46 pages, with a quite full word-list. See 361.2.

ķ

THE ARTICLES

38. The definite article is ter, die, das + the; the indefinite ein, eine, ein + one, an, a.

The definite article declines:

		masc.	fem.	nenter.	common gender.
Sing.	N.	der	die	das	Plu. vie
	G.	des	der	ded	der
	D.	dem	der	dem	den
	Λ.	ren	die	das	die

The indefinite article declines:

Sing.	N. ein	eine	ein
	G. eines	einer	eines
	D. einem	einer	einem
	A. einen	eine	ein

39. The articles are unaccented.

The definite article is the weakened demonstrative pronoun, which as chief stress. It retains the short original forms of the same. The indefinite article is the weakened numeral (in, which also has chief stress. To mark the demonstrative pronoun and the numeral, they are sometimes printed spaced or with a capital letter: Mur Einen Schritt, so bist frei, F. 4563; but Es war cinnal cin König, F. 2212. Der Mohr kann gel (Sch.). Es thut mir lang' shon web, daß ich dich in der Gesellschaft seb', 1 3470-1.

40. Owing to their lack of accent both articles suffer aphæresis ar apocope, and contraction with the preceding word, most frequently with preposition: bem and bas are, according to good usage, combined with the following prepositions: an, auf, bei, burd, für, hinter, in, über, um, unter, vo vor, and zu; e. g., am, ans, aufs, ins, ums, vom, etc. In general, contraction with dissyllabic prepositions are rarer in the classics, common in the spoken language, which allows the contraction of ben whether dative plaral or accusative singular masculine with the above and also with othe prepositions. Some such are even in the classics: in = in'n, F. 2429, m Seffel, Lessing's Nathan, him Sad, min Ropf, man Lag. 3n, um contail

z (see 389.5) consonants and the article is not absent, as is generally lained. In conversation is heard: um Arm, von Bäumen, auf'n Reibern, n Bānden, arch'n Baib. The apostrophe in auf's, üter's, etc., is not at indispensable. Der, dative singular feminine, combines properly only h zu into zur.

- 11. Attractions of the definite article, especially of the neuter, to preing words other than prepositions are common in the spoken lanage, e.g., aid will's Budy holen," are but fid's Bein gebrochen." "Bind't's re hank an" (G.). "Und haft's Rüffen verlernt" (F. 4485).
- 1. The aphanesis of "cin" common in the spoken language is also and in the written, e.g., "Barf auf 'nen Stuhl die Handschuh'" (Uh.). Bold breviations are these in Chamisso's, "'s war mat 'ne Rahentönigin." The opping of cin before mat is not unusual: "Es war mat cin Raifer;" "Ruch r mat cin Refer (Bü.). Notice so'ne for sinc. The early N. H. G. (16th ntury) cim for sincm (comp. M. H. G. cime for cineme), cinn or sin for sen occur still in some South German dialects. In M. H. G. the aphæsis of "cin" is unheard of, while the definite article is much more iant than in the present classical language. Apocope of the same is ill allowable in certain S. G. dialects.

DECLENSION OF NOUNS.

42. There are three systems of Declension, the trong (Vowel, Old), the Weak (Consonant, n-Declension New), and the Mixed.

The strong declension (see 43, 1) has (c)s in the geniwe singular; the weak has (c)n in all cases, singular nd plural, except in the nominative singular; the vixed has (c)s in the genitive singular, (c)n in the shole plural.

General Rules.

43. 1. Feminine nouns never vary in the singular.

,

- 2. The only case-endings are (t) of for the genitive singular ad (t) it for the dative plural.
- 3. c in the case-suffix ought to stand in nouns ending in β , β , δ , t, t.

- e is always dropped after cl, cn, cn, cr, chen, lein. In cases it is optional. If the genitive singular has ce, the dative singular has c as a rule: Hauses, ju Hause.
- a. Distribution of nouns among these declensions accor to gender:
- 1. The bulk of feminine nouns belong to the n-declenation neuters at all.
- 2. To the strong declension belong mainly masculine neuter nouns, and a few feminines.
- 3. The mixed declension includes a few masculine neuter nouns.

Strong Declension.

- 44. We distinguish for practical reasons four class according to the formation of the plural:
- 1. No sign unless it be umlaut: das Wunder, die Wunder; Bater, die Bäter.
 - 2. -e without umlaut: ber Tag, die Tage; tas Los, tie Lose.
- 3. —e with umlaut: der Sohn, tie Söhne; die Kraft, Kräfte.
- 4. -er always with umlaut : das Bad, die Bader; das hat die häuser.

45. First Class.—a. No sign:

Sing. N. der Spaten	das Gewerbe	ber Enge
G. des Spatens	des Gewerbes	des Enge
Plu. D. ten Spaten	den Gewerben	ben Eng

All other cases singular and plural like nominative singulab. With umlaut:

Sing. N., D., A. der Faden	der Bruder
G. des Farens	des Bruders
Plu. N., G., A. Die Faden	die Brüder
D. ben Faben	den Brüdern

- 46. To this class, which never take r in the G. and D. sing., belong:
- 1. Masculine and nouter nouns in -el, -er, -en, -den, -lein, -fel, e. g., ter Hebel, ter Nitter, ter Boten, ter Hopfen, das Hünden, tas Rintlein, das Rätsel.
 - 2. Neuters of the form Ge-e, e. g., tas Getreite, Geidmeite.
- 3. The names of kindred in -er: Bater, Bruder, Tochter, Mutter, Schwager, all with umlaut. Also der Käse.
- 4. Certain nouns, if they take -n in the nominative singular, as they may according to usage: ter Fessen, ter Brunnen, ter Tropien, ter Educaten (these so generally). The following not so frequently in the written language: ter Junte(n), Balte(n), Friere(n), Gerante(n), Gesalte(n), Glaube(n), Hause(n), Mame(n), Same(n), Educe(n).
- 47. 1. Atem (Coem), Broben, Cidam, Brofam stand isolated. The plural, if it occurs, is the -c of the next class. Brofamen, f., is more common than Brofame. See 501.
- 2. All nouns sub 4, except Brick, Gefalle, and Greanle, were weak in M. H. G., and are not yet fully established in the strong declension. Since usage is unsettled, they might all be put under the mixed or weak declension.
- 48. 1. The nouns of this class that take umlant, besides the names of kindred in her, are the Apple After have. After hortom, soil; Faten, thread (die Faben hathoms), (Varien higher harbor, haven; Hammer hammer, Laben (?), shutter, shop (store); Mangel, want, Nagel hail, Tien hoven, stovo; Sattel haddle, Schaben, harm (but ex ift Schabe, it is too bad); Schabel beak, Schwager brother-in-law, Bogel, bird, howl. Two neuters take umlant: Alester he cloister had Lager (?), camp.
- 2. In none of these is there any cause that could produce umlaut as in i and jo stems or before -ir. Umlaut has arisen from analogy with these. Sater, Mütter, Brüber, Töchter had umlaut already in M. H. G. This way of forming the plural is on the increase, because it is so convenient and some way of indicating the plural seems necessary. Bägen, Läger, etc., still sound objectionable, but have no worse and no better claim to correctness than the above.

49. SECOND CLASS.—Plural -e, no umlaut.

Sing. N., A.	Hund	die Drangsal	das Jahr
G.	des Hundes	ter Drangfal	tes Jahres
D.	dem hunde	der Drangfal	dem Jahre
Plu. N., G., A.	Hunde	Drangfale	Sahre
D.	Hunden	Drangfalen	Jahren

50. To this class belong:

- 1. A small number of feminines in -nis and -fal, e. g., die Trangfal, Trübfal; die Finsternis, Betrübnis, pl. -nisse.
- 2. Many masculines; some capable of umlant, but without it. These may be considered exceptions to the third class: der Ual+eel, Uar eagle, Urm + arm, Bejudy visit, Umboß + anvil, Dads badger, Tody, wick, Grad+degree, Halm, blade, + haulm, Huf + hoof, Hund dog, + hound; Yads salmon, Yant sound, Ruds + lynx, Piad + path, Puntt + point, Schub+shoe, Tag + day, Stoff material, + stuff; Thron + throne, Berjudy, attempt, and a very few others.
- 3. Masculines in -ig, -(i)th, -ing, -ling, -(e)nd, -at, -is, -ith, e. g., der Freund + friend, Günjerith + gander, Habitt + hawk, Herring + herring, Itis (pl. Itise) pole-cat, Jüngling + youth, König + king, Mold salamander, Monat + month.
- 4. Many neuters, among which monosyllabics; those with the prefix Ge-; in -nis, -sal: ras Jahr + year, Geschent present, Gesängnis (pl. -ssc) prison, Schidial fate.
- 51. The group sub 2 is on the decrease, because we cannot tell on the surface whether a noun has umlant or not. To avoid the difficulty, several nouns form very anomalous plurals: ber Ban, die Banten instead of Bane. Of Mord, pl. Morde is rare, rather Mordibaten; of Schund, pl. Schunde is rare, rather Schundfacken; Schund, pl. Schunde is seldom used, since it stands in the singular after a number, e. g., drei Schlud Branntwein. See 173.

52. THIRD CLASS. - Plural -e, with umlaut.

Sing. N., A	. der Stamm	die Ruh	die Braut
G	k. des Stammes	der Ruh	der Braut
I). dem Stamme	der Ruh	der Braut
Plu. N. A., G	. Stämme	Rühe	Bräute
\mathbf{I}	. Stämmen	Rühen	Bräuten

53. To this class belong:

- 1. The majority of strong masculine nouns, mostly monosyllabics: der Gesang + song, Gebrauch use, Ball + ball, Gast + guest, Sohn + son, etc.
- 2. A number of feminine nouns: die Augst + anxiety, Art + axe, Bant + bench + bank, Brunst, heat, lust; Brust + breast, Faust + fist, Frucht + fruit, Gans + goose, Grust vault, Hant + hand, Haut + hide, Klust + clest, stusst in compounds as in Cintunst + income; Laus + louse, Lust air, Lust desire, Macht + might, Mast + maid, servant; Maus + mouse, Nacht + night, Nabt seam, Nuß + nut, Sau + sow Schuur string, Statt eity, Bant wall (of a room), Burst sausage, Zunst guild; Ausslucht evasion, Armbrust cross-bow, Gedwurst + swelling.
- 54. Only two modern neuter nouns belong here, the last of which is of doubtful gender, viz.: Tas Hoß raft (429, 1); ter or tas Chor + choir, chorus.
- 55. No neuters belong here really except O. H. G. meri, has Mecr, his Mecre, now according to 2d Class. Der and has Cher, borrowed from church Latin "chorus," has joined the group sub 2. Das Beet, his Böte because it was also her Bost, a modern borrowed word < D. Die Boste is more elegant. Das Rohr, his Röhre is not good. Besides there is his Röhre, feminino singular, the pipe, tube.

56. FOURTH CLASS.—Plural -er, always with umlaut:

Sing. N.,	A.	das Rad	Irrtum
	G.	des Rades	des Irrtums
	D.	dem Rade	dem Irrtume
Plu. N., G.,	A.	Räter	Irrtümer
	D.	ten Räbern	den Irrtümern

57. To this class belong:

- 1. About sixty neuter monosyllabics: tas Aas (Ajer), Blatt, Dach, Fach, etc.
- 2. All in -tum, whether masculine or neuter: tas Herzogtum, ber Reichtum.
- 3. Some masculines, viz.: ter Bösewickt*, Dorn*, Geist, Gott, Leib, Mann, Ort*, Rand, Strauch*, Bormund, Wald, Burm.
- 4. A few neuters, with the prefix Ge- : tas Gemach, Gemüt, Geichlecht*, Geschaft, Gemant*.
- 58. Only neuters had this plural -rr at first. Of the sixty sub 1, some twenty form a different plural, and usage is unsettled; so do those sub 3 and 4 marked with a *. In the following a distinction is made in meaning between the different forms of the plural:

Sub 1, 2, 4,—

ras Band,	Bande, ties,	Bänder, ribbons.
Denkmal,	-male, monuments,	-mäler, figurative sense.
Ding,	Dinge, things,	Dinger, coll., e. g., girls.
Giesicht,	Wesichte, visions,	Gesichter, faces.
Gewand,	Gewande (poetic),	Gewänder (commonly).
Land,	Lande (poetic),	Länter (commonly).
Licht,	Lighte, candles (only),	Lichter, lights.
Schild,	masc. Swifte, shields,	Schilter (sign-board).
Stift,	masc. Etifte, pencils,	Stifter, institutions.
Tuch,	Tuche, kinds of cloth,	Tücher, cloths, shawls.
Wort,	Worte, words (their mean-	Wörter, parts of speech
	ing),	-

Sub 3, ---

ber Mann, Mannen, retinue, Männer, men.
Drt, Drten, D. and G. pl. only, Örter, places, towns.

- 59. Trümmer occurs in the plural only. But a weak plural Trümmern occurs in the classics. Singular Trumm + thrum. "Säupten," as dative plural, is isolated in "zu ben Säupten." Mann was originally a cons-stem, *mann- (see Kluge's Dict.). The form Mann in fünfzig Mann is the real nominative plural of the cons stem. Menfch was originally neuter, being an adjective O. H. G. mennisco. Das Menfch, bie Menfcher, now implies a slur, speaking of woman = strumpet (see Kluge's Dict.). Wicht in Böse wicht was also once a neuter, + wight. See 431.
- 60. In early N. H. A. many of the neuters still occur without -cr. Rindes Rind werben beine Werf preisen (B.). Rinder und Kindes Rind (ergablen) von bem Golf nech und seinen Schren (Sch.).

The plural in & is not elegant. Safets, Sungens, Frauens, Frauens are more than colloquial, though found in the classics. This -& is strictly Low German, and identical with English s. The parts of speech are used with &: die Acts, die Abers, die Abens.

Weak or 11-Declension.

61. Characteristics: (c)n in the plural and also in the singular of masculine, except the nominative.

Masc

Fem.

Sing. N. der Bote

Whole sing. Bunge

G. tes Boten

All through sing, and plu.

Whole plu. Zungen

Only feminine and masculine nouns belong to this declension.

Like Junge decline all feminines, except: 1. Mutter and Judger. 2. The few in -nis and -fal (see 50. 1). 3. The strong of the 3d class (see 53, 2).

- 62. Of the masculines belong here:
- 1. All of two or more syllables ending in \mathfrak{e} , except Raje and the doubtful strong ones sub 4, 1st class (see 46).

- 2. The following which generally do not show the e, which belongs to them: der Bär, Bauer, Burich, Fürst, Fink, Geck, Geciell(e), Graf, Hagestolz, Helt, Herr, Hirte, Insasse, Menich, Mohr, Narr, Ochse, Prinz, Psan, Span, Sproß, Steinmen, Thor (fool), Borsahr.
- 3. Many nouns of foreign origin, which are difficult to tell from strong nouns, many of them names of persons and animals. They generally end in -t, -nt, -ft, with the suffix -graph, -arch, -frat, -log(c), -nom, c. g., Por't, Bandi't, Israeli't, Patrio't, Archite'tt, Kome't, Plane't, Konjona'nt, Stude'nt, Phanta'ft, Telegra'ph, Wecgra'ph, Patria'rch, Mona'rch, Antofra't, Temofra't, Aftrolo'g(e), Philolo'ge, Aftrono'm, Defono'm (polite for "farmer"); also Tyra'nn.
- 4. Some names of nationalities in -ar, and -er, e. g., der ll'ngar, Bulga'r(e), Tata'r, Baier, Pommer, Kaffer.
- 5. The adjective used as a noun when preceded by the article (see **220**).

REMARK.—An isolated form is now "anj Gyben." (Gybe was either weak or strong. But "in Ghren," "mit Frencen" are old datives plural (see 434, 1). Notice the spelling Königin, pl. Königinnen.

Mixed Declension.

- **63**. Characteristics: G. sing. (e) \mathfrak{s} , the whole pl. (e) \mathfrak{n} .
- Only masculine and neuter nouns belong to this declension, and very few have not double forms for genitive singular and for the plural. The following generally belong here:
- 1. Auge, Bett, Ente, Gevatter, Hemt, Verbeer, Maß, Muskel, Obr, Pante'ssel, Schmerz, See, Stadel, Staat. Nadbar, Unterthan, Vetter sometimes retain in genitive singular the (c)n of their former declension. Bauer, peasant sub 62, 2 is sometimes classed here.

Tas herz inflects G. tes herzens, D. tem herzen, A. tas herz; allowing for its being a neuter, which always has nominative and accusative singular alike, it really comes under 1st Class, strong, sub 4 (see 46). Edmerz rarely has Schmerzens. Ter Sporn,

red Sporns, has taken an -n in the singular, but the old weak plural Sporen is still the rule, though Spornen occurs. Thronon, borrowed in M. H. G. < Gr.-L. thronon, is very rare. The plural of Dorn is either Dorne (old) or generally Dornen; also Dörner.

The mixed declension is quite modern, and does not exist in M. H. G.

2. Foreign nouns in -vr (v long and accented in the plural, short and unaccented in the singular), c. g., ver Tv'ttvr, vie Tvttv'ren, ver Proje'(jvr, vie Projejjv'ren. Also Inje'tt, Intere'jje, Juwe'l, Statu't, and others.

Colloquially one hears sometimes -n after nouns in -cl and -cr: die hummern, lobsters; Eticfeln, boots; but they are not to be imitated.

Declension of Foreign Nouns.

- 64. Those which are fully naturalized come under the declensions already treated of. It remains to speak of those not at all or partly naturalized, and their inflection is very irrer—and complicated.
- 1. Those that retain their foreign inflection, e. g., Rejus Christus, Jesu Christi; Mari'a, Mariae; Modus, pl. Modi; Cajus, pl. Cajus; Cherub, pl. Cherubim; Conto, pl. Conti; Sactulum, pl. Sactula; Lord, pl. Lords; Lempus, pl. Lempora. Their number is decreasing.
- 2. Those which take a German plural ending, on for instance, and do not inflect in the singular, e. g.: tas Trama, pl. Tramen; Thema, pl. Themen; Individuum, pl. Individuen. Globus, Rythmus. But these are also found with -s in genitive singular, and then come under the mixed declension.
- 3. Nouns whose foreign plural ended in -ia take -ieu: Studium, pl. Studien; (Vymnasium, pl. Wymnasien. The ending of the singular may have been lost, and they have -s in genitive singular, as Adve'rb, Partici'p, Semina'r, Minera'i, Fossi'i, pl.

Abverbien, Juffilien, etc. Notice Primas, Prima'ten; A'tlas, Atla'nsten; Krifis, Krifis. On the whole, there is a great deal of irregularity, and therefore freedom, in the inflection of foreign words.

Declension of Proper Nouns.

- 65. 1. The names of nations and peoples are inflected both in the singular and plural. Those in -cr (except Baier and Pemmer, where -cr is not suffix, denoting origin) go according to 1st Class (strong). All the others go according to the n-declension: ter hamburger, tes hamburgers, etc., D. pl. ten hamburgern. But ter Sachie, tes Sachien; ter Preuße, tes Preußen, etc.
- 2. Certain geographical names (see 147), which always have the definite article, are treated like any common noun, e. g., der Abein, des Abeins, das Fiddelgebirge des —es; das Elfaß, des Elfaßes; die Schweiz, der Schweiz, etc.
- 3. Names of persons are uninflected if preceded by the article (an adjective or title between article and name makes no difference), e.g., her Karl, her Kaifers Karl, hem großen Friedrick. If the title follows the name, or if the name in the genitive, modified by an adjective, stands before the noun upon which it depends, then the name takes -s, e.g., has Reich Lutwigs bes Frommen, her großen Friedricks Generale.
- 4. Names of persons, places, and countries without an article take a genitive in -cs: Goethe, Goethes; England, Englands; Anna, Annas. But names of males ending in a sibilant, if inflected at all and an apostrophe is not preferred, and feminine names in -c, form a genitive in -cns, e. g., Marcus, Franzens, Mariens, Sophiens. Surnames in a sibilant certainly prefer an apostrophe, e. g., Musaus' Boltsmärchen, Opis' Berk, Gaust' Lot. Names of places in a sibilant are constructed with von: the Reichsfreiheit von Ro'nstanz, the Beschtigungen von Pari's.

- 66. A dative and an accusative in -en of names of persons are hardly in use now, as e. g., Schillern, Goethen, Mopfloden. Christian feminine names retain them more easily than masculine, e. g., Haft du Marien gesprochen? See 68, 3. Such genitives as Mutters Tod, Tantens Geburtstag are hardly proper.
- 67. Plurals of names of persons are formed in various ways. The general rule is: -c for masculine and -c(n) for feminine names, e. g., Deturide, Marien; but also Brunhiste, Elijabete. -s forms the plural of masculines ending in a vowel and of feminines in -a: Unuas, Hugos.
- 68. 1. Here also belongs the plural of surnames denoting the members of the family, formed by -6 if ending in a consonant not a sibilant; by -(c)n if ending in a vowel or a sibilant (occurs only in familiar language however), c. g., Strinbrüggen, the Steinbrügges; Sublings, the Suhling family; Nüds. Other endings for the plural, generally of foreign names however, are -nc, -ncn: Cato, Catonc; Scipionen, Ottone, and Ottonen; but the first n belongs to the stem of course. Compare L. Scipio, Scipionis. This & was perhaps originally a G. sing.
- 2. Biblical names retain foreign inflection: Evangelium Matthaci, in Jesu Christe, Mariae Heimschung.
- 3. It should be borne in mind that the rule in the classical writers before Goethe's death is not the rule now. Lessing wrote bes Luthers, bes Melandyhous; Goethe, Leiben bes jungen Verthers. The dative and accusative in -en are the rule in them, the exception now, Saben Sic Karlen geführleben, Wilhelmen gefücht?

DECLENSION OF THE ADJECTIVE.

69. The adjective is inflected according to two systems of declension, the Strong and the Weak. It is inflected strong when there is no limiting word before it; weak, when there is an article or demonstrative pronoun. It is uninflected in the predicate.

1. Stron	NG:			
	masc.	fem.	neuter.	common gender
Sing. N.	guter	gute	gutes	Plu. N. gute
G.	gutes	guter	gutes	G. guter
D.	gutem	guter	gutem	D. guten
Λ.	guten	gute	gutes	A. gute
2. WEAK	::			
	masc.		1.	neuter.
Sing.	N. der gute		lute	das gute
	A. den gute	n	jute	das gute

All other cases, sing. and plu., guten.

Notice that the nominative and accusative singular of the feminine and neuter forms are alike.

- 70. After cin, Icin, and the possessive pronouns the adjective is strong in the nominative singular of all genders and in the accusative singular of feminine and neuter, since it is like the nominative. The whole pl. is weak.
- Sy. N. ein großer Dichter, eine rote Ririche, ein herrlichen Gericht G. eines großen Dichters, einer roten Ririche, eines herrlichen Gerichtes D. einem großen Dichter, einer roten Ririche, einem berrlichen Gerichte A. einen großen Dichter, eine rote Kiriche, ein berrliches Gericht.
- 71. Adjectives ending in -cl, -cr, -cn as a rule drop the c of these suffixes when inflected, sometimes however the c of the case-ending -cn, e.g., edel, edler, edle, edled; mager, magrer, magrer, magred; eigen, eigner, eigne, eigned; but heitern and heitren, edlen and edeln. Those in -er like to retain both e's: beiterer, heitere, heitered. Note therefore: Ein magrer Ochfe, eines magern or magren Ochfen, etc.; der beitere or beitre Simmel, des heiteren, heitren, or heitern Simmels, etc.; mein eignes Sans, meines eigenen or eignen Sanfes, etc. For hech, beder, hehe, hobes see 490, 3, b.
- 72. The genitive singular masculine and neuter, -cs, is now so regularly replaced by -cn, that this should perhaps appear in the paradigm. Though strictly according to rule, -cs has become the exception; -cn has prevailed since the 17th century. Voss, Klopstock, and Grimm opposed it. Goethe favors it. Cin, fcin, the possessive and the demonstrative pronouns never allow -cn for -cs; never tenen Mannes, diefen Buches.

COMPARISON OF THE ADJECTIVE

73. Adjectives are compared by means of the inflectional suffixes -rr and -(r) it, e, g, :

positive.	comparative.	superlative.
jung	jünger	jüngjt
schön	j dyöner	ídyönjt
reidy	reicher	reidyt

Those in -cl, -cu, -cr lose this c before the comparative -cr; but retain it and lose the c of -cst in the superlative, c. g., mager, mager, magers; tuntel, tunter, tuntels. c in -cst is as a rule retained after v, t, s, se, 3, rd, s, and st, but not necessarily, e. g., lauteste, gewisselte, süseste. Oriste alone is classical, but in the spoken language süste, beiste, fürste, etc., are heard. "Soch" retains the former h in the comparative höher, and h in nahe becomes d: nächst. See 490, 3, b.

- 74. The umlant generally takes place, but it is very difficult to tell when it does not. A not small number are doubtful, e. g., blaß, gesunt, fromm, etc. No umlant in: 1. Those with the stem-vowel an, e. g., lan, blan, etc. 2. Foreign ones: brav, nobel, etc. 3. Participles: besunt, genant, etc. 4. Derivatives: straßar, schalthaft, langsam, unglanblich, etc. 5. Bunt, blant, bumps, salsch, stab, bob, bob, bob, tabl, tlar, lahm, laß, los, matt morsch, platt, plump, rasch, rob, runt, sanst, jatt, schlaß, schlaß, schlaß, straß, toll, voll, wahr, sahm, sart.
- **75.** The comparative and superlative forms are declined just like the positive. Examples:

(Brößerer Spaß, größeres or größeren Spaßes, etc.; ber größere Spaß, des größeren Spaßes, etc.; ein größerer Spaß

Rlarstes Waffer, bas flarste Baffer, ein flarstes Baffer.

Edlerer Mann, der edlere Mann, ein edlerer Mann; eitelster Burich, ber eitelste Burich, ein eitelster Burich.

heisrere Sanger, ber heisrere Sanger, ein heisrerer Sanger, G. eines beisreren Sangers, etc.; ber heiserste Sanger.

76. 1. Irregular Comparison.

By the use of different stems:

Positive,	Comparative.	Superlative.
$\mathfrak{gut} + \mathbf{good}$	beffer, adv. bağ + better	\mathfrak{best} + best
viel	mehr + more	meist + most
	mehrer	mehrst
(gering or wenig)	minder	mindest

Gut and viel are never compared regularly. Mehrer and mehrst are due to double comparison. "Mehrst," though occurring in Goethe and Schiller, is not classical. Mehr and minter are really not adjectives, but are used adverbially and substantively. "Baß, (mehr, very, much) is now archaic. "Toch haß hept thu ter linke Mann" (Bü.). Hürbaß (onward); "haß" also means sehr, stark: "Das macht, er thät sich haß herver" (Sch.). "Und ward nicht mehr gesehn" (G.). Morgen ein mehreres — to-morrow (I will write) more.

2. Defective and Redundant Comparison.

a. There is a class of adjectives derived from adverbs and prepositions:

Adv. or prep.	Comparative.	Superlative.
(außer)	äußer ·	äußerst
(hinter)	binter	hinterst
(inner)	inner	innerst
(nieder)	nieter (rare)	niederst
(vb[er])	ober	oberft
(unter)	unter	unterst
(vor, fort)	vorter	vorderst

For the derivation of these adverbs, see **551**, 3. The superlative suffix -it is added to the comparative. This is due to their former full comparison, as for instance, O. H. G. pos. *hintaro*, comp. *hintaro*, superl. *hintarost*. The pres-

ent comparatives hintere, obere are not even now felt as real comparatives; äußer has a spurious umlaut; "öberste" and "förderste" are colloquial; "vorder" comes from "fort," O. H. G. fordar; compare Eng. further, which has nothing to do with far.

The first compares regularly like an adjective in -cf. The positive occurs only in compounds now, and the comparative has the force of the positive.

NUMERALS.

77. Cardinals.

eins, + one zwei, + two trei, + three vier. + four fünf. + five secho, + six sieben. + seven act, + eight ncun, + nine achn, + ten elf, eilf, ölf, + eleven awelf, awölf, + twelve breischn, + thirteen vierschn, + fourteen fünfschn. + fifteen sech(s) schn, + sixteen awanzig, + twenty ein und zwanzig, + twenty-ond 7,65

zwei und zwanzig, + twenty-two drei und zwanzig, + twenty-three dreißig, + thirty ein und treißig, + thirty-one viergia, + forty fünfzig, funfzig, + fifty sedszia, sedzia, + sixty ficb(en)zig, + seventy addig, + eighty neunzig, + nincty hundert (tas hundert), + a hundred (ein) hundert und ein(o), + a hundred and one (ein) hundert und zwei, + a hundred and two (ein) hundert (und) zehn, + a hundred and ten

- (ein) hundert und zwanzig, + a hundred and twenty
- (ein) hundert ein und zwanzig, + a hundred and twenty-one
- (ein) hundert acht und achtsig, + a hundred and eighty-eight zweihundert, + two hundred

dreihundert sechs und siebzig, + three hundred and seventy-six tausend (das Tausend), + a thousand

- (cin) taujent und cin(s), + a thousand and one
- (cin) taufend drei und vierzig, + a thousand and forty-three
- (cin) tausent cinhundert or elshundert, + a thousand and one hundred

ein tausend achtundert drei und achtig or achtschn hundert drei und achtsig, + one thousand eight hundred and eighty-three dreismal hundert tausend, + three hundred thousand eine Millio'n, + a million eine Millio're, a thousand millions eine Billio'n, + a billion

78. Inflection.

Fully inflected are only cins, zwei, trei, as follows:

Masc.	Fem.	Neuter.
N. einer	cine	cin(c)s
G. eines	ciner	cincs, when used substantively.
N. ein	cine	cin, like the indefinite article
		when used attributively.

"'s war einer dem's zu Herzen ging" (Ch.); "eins von beiden," one of two things.

N.	zwei	G.	zweier	D.	zweien	A.	zwei
N.	drei	G.	dreier	D.	dreien	A.	drei

79. Older inflections were mase, ween, fem, zwo. Zwei, the neuter, has crowded out the masculine and feminine forms, which may still be found in the older modern classics, and still in use in the S. G. dialects. Bad zweien recht ist, ist breien zu enge. Durch zweier Zeugen Mund wird allerwärts die Wahrheit fund (F., I. 3013). Zween, die mit mit überfuhren

.... (Uh.). Bwo Posen eines Tucks, cut from the same cloth. "Bwo Jungsen in ben besten Sahren" (Gellert). The plurals zwei and breie are in analogy with the strong noun and adjective declensions. From 4-12 the e in the plural represents O. H. G. i when they were i-stems, fünste < fimst. The only other case in which these numbers are instected is the dative plural (in -cn): auf alten Bieren frieden, alle Biere ven sich streeten; mit Schsen sahren; zu Oreien. Bweier, zweien are according to the adjective instection.

80. Ordinals.

The ordinals are formed from the cardinals by adding -te to the numbers from 2-19, and -ft from 20 on.

(der) erste, + first	sechste, + sixth
zweite, + second	jedzehnte, + sixteenth
dritte, + third	zwanzigste, + twentieth
vierte, + fourth	hundertste, 4 hundredth
fünfte, + fifth	tausentste, + thousandth

Their inflection is that of adjectives; zweiter, ter zweite, ein zweiter; G. eines zweiten. See 438, 1.

PRONOUNS.

81. Personal Pronouns.

				Special i	forms for g	ender in the
	Co	mmon gende	er.	singular.		
	I.	11.	III.		III.	
			Reflexive.	Masc.	Fem.	Neuter.
Sing.	N. ich	du		er	fie	cs
	G. meiner	deiner	seiner	sciner	ihrer	seiner
	(mein)	(dein)	(sein)	(sein)		(fein, es)
	D. mir	dir	(id)	ihm	ihr	ihm
*	A. mich	dich	(id)	ihn	fie	લ્ડ
Plu	. N. wir	ihr	-		fie	
	G. unser	euer	***************************************		ihrer	
	(unfrer)	(eurer)				
	D. uns	euch	(id)		ihnen	
	A. uns	euch	(id)		fie	

The first and second persons and the plural of the third person are of common gender. The singular of the third person has a form for each gender.

82. In the genitive singular the longer forms in -cr are common; the others are now archaic and poetic, e. g., "Bergißsmeinnicht" (the flower). "Ich tenfe Dein," etc. (G.). The lengthened forms curer, univer are not yet sanctioned, though common in the spoken language, and, especially curer, not very rare in the classics, e. g., "(Wie cr) fei Tafel Eurer selft nicht achtet" (Sch.). "Dann bedarf es univere nicht, (Sch.). The genitive singular neuter "es" occurs still in certain constructions, generally called an accusative: "Er hat es feinen Hehl daß...." (Sch.). Ich bin es müre. Es nimmt mich Bunder. (See 183, 199, 2.)

83. Reflexive Pronouns.

For the first and second persons the personal pronouns serve as such, e, g,, id fürdte mid, wir freuen uns, ihr fdyeut euch. For the third person the forms are made up of the personal and the old reflexive pronouns:

```
Masc and neuter. Fem. Common gender.

Sing. G. seiner (ibrer, pers. pron.) Plu. (ibrer, pers. pron.)

D., A. sich sich sich sich
```

84. The reciprocal pronoun has no special form; as such are used und, cud, sid, cinanter, meaning "each other," "one another." Ex.: It ideast cud. Wir sulten cinanter nicht.

The Possessive Pronouns.

85. The possessive pronouns are: mein + my; dein + thy; sein, his, its; ihr, her; unser + our; ener + your; ihr, their; Ihr, your; der meine + mine; der deinige + thine, etc.; der meinige + mine; der deinige + thine, etc.

They are inflected like adjectives (see 69); but mein, bein,

fein, unfer, euer, ihr, like the indefinite article (see 38), in which the nominative singular masculine and the nominative and accusative singular neuter are uninflected, e. g.:

Neuter. Sing. N., A. mein Tuch	Feminine. deine Nichte
G. meines Tuches D. meinem Tuche	deiner Nickte deiner Nickte
Plu. N., A. meine Tücker	deine Nichten
G. meiner Tücker	teiner Nichten
D. meinen Tüchern	beinen Nichten

For the declension of ter meine, ter meinige, see the weak adjective, **69**, 2. The rest stand uninflected used predicatively and when they follow the noun (now archaie), e. g., Was mein ift, tas ift tein und was tein ift, tas ift mein (B.). In bast tas Herze mein so gang genommen ein (Song).

86. (Auer, Gure, Seiner, Seine are often abbreviated into Ew., Sr., Se.: Se. Majefilit, Ew. Wolfgeboren. Jury is archaic, e. g., Jury (Inaben. It is an imitation of the old G. bere (see 89). It does not occur before the seventeenth century. It stands for masculine and feminine sing, and pl. in titles: Jury (Inaben, Eminenz, Durchlaucht.

87. The possessive pronouns form certain compounds with wegen, halben, willen, and gleichen. Ex.: meinenwegen, ihrenwegen, meinethalben, ihresgleichen, euresgleichen. The compounds with wegen and halben are really D. plu, meinen wegen, beinen halben. After a sprang up the excrescent temeinentwegen, beinenhalben, current in the sixteenth century. These became the now classical meinenwegen, beinethalben, though the longest forms are still heard; also meinthalben, even meintshalben, occur, but they are not good. Meinetwillen < meinentwillen < meinenwillen are original accusatives, e. g., um meinen willen = for my sake.

The origin of ibredsleiden, etc., is not so clear. Cleiden is without doubt the adjective used as a noun and governing a preceding genitive, which was at first the genitive of the personal pronoun and became later the possessive pronoun agreeing with sleiden (M. H. G. sine gelichen). But whence &? Is it the genitive sign -c& in compound nouns, Liebes-brief, Mittagoflunde, which was looked upon as a mere connective? (See 518, 2.) In M. H. G. was a Gen. mines, dirnes, which with miner, stood for

min, almost exclusively before selbes. But beintegleichen is not old enough to connect with M. H. C. dines selbes.

Other compounds with the possessive, like maintentile, maintentile (see 552), are clearly genitives.

Demonstrative Pronouns.

88. These are: 1. her, his, has + the, that; 2. hisfer, hisfer + this; jener, jene, jenes, that, + yon. The first, when used with the noun, differs only in accent and not in declension from the article (see 39). When used substantively (without the noun) it declines:

	Masc.	Fem.	Neuter.	Common gender.
Sing. N.	der	die	das	Plu. die
G.	deffen	deren	teffen	deren
	bes	ber	des	derer (der)
D.	tent	der	dem	benen
A.	ten	die	das	die

89. The spelling of "begin for "begin is unwarranted. It implies that it is an abbreviation of "begin" which it is not

"Dero" is the O. H. G. form retained in certain phrases, as in bero Gnaben. Derentwegen, halben, etc., are forms like meinenwegen, etc., but rarely lose the n before t. For their explanation see 87.

	Masc.	Fem.	Neuter.
90.	dieser	diese	dieses and dies + this
	jener	jene	jenes + yon, that

These are declined like strong adjectives, and stand adjectively and substantively: diese Feder, dieses Lintensaß, jener Baum. Jenes bort ist mein Buch.

91. Another group of demonstrative pronouns, sometimes called "determinative," consists of:

Masc.	Fem.	Neuter.
berjenige	diejenige	dasjenige, the, that
derselbe	dieselbe	dasselbe, the same
derselbige	dieselbige	tasselbige, the same
felber, felbit (uninflected), felbiger	felbige	felbiges, the same
fold (er)	foldy(e)	sold (es), + such

1. The inflection of the first three is that of "rer" and a weak adjective, e. g., rerjenige, resjenigen, remjenigen, etc. Their composition is apparent.—ig is the usual adjective suffix (see 525, 1).

In the 16th century ber is still separated from self-, jen-, and earlier the latter were even declined strong, ber jener, bem selfem, but they soon followed the n declension. "Der jene," from which "berjenige" developed, becomes obsolete in the 17th century. "Dersetbige" < "bersetbe.". Accent: be'rjenige, but berse'se.

- 2. Softer is a stereotyped form like votter, and felfit is a genitive singular of felf, M. H. G. solbes. The excrescent t appears first in the 13th century.
- 3. Sold is inflected like any adjective, even with -en in the genitive singular, e.g., foldenfalls, folden Glaubens. It may be uninflected, always if followed by sin and generally if followed by another adjective. An apostrophe after fold is uncalled for. Sold sin Mann, fold stöne Blumen. Sine folde Beleivigung fann ich nicht vergessen. Als er soldes sah. . . . (B.).

92. Interrogative Pronouns.

Wer + who; was + what; welcher + which; was für ein, what sort of.

1. Wer declines :

Masc. and fem.	Neuter.		
N. wer	was		
G. weffen, wes	weffen, wes		
D. wem	-		
A. wen	was		

Bes or west: wes as bessen: bes. See 89. The genitive lengthened by -en like bes > bessen was not yet established in the 16th century 28es is now archaic, except in compounds, e. g., wesheld, weswegen. For wessenthalben, see bessen, becenthalben, 87, 89.

2. Beld + which, what, declines strong. Before "ein" it is

- always, and before an adjective it is often left uninflected, also in poetry when used adjectively: Welch Getümmel Straßen auf! (Sch.). Welch ein Gefühl (F. 1011). Welcher Mann war es?
- 3. Was für, was für ein, what, what kind of. "Ein" alone is inflected like the indefinite article if used adjectively; like a strong adjective if used substantively: "Was für Berge, was für Eüßten trennen uns tenn noch?" (Le.). Was für ein Baum ist tas? Was für Dinte ist dies?

93. Relative Pronouns.

- 1. Der, die, das, which, + that, who, declines like the demonstrative, but the genitive plural is never derer: Reiner siegte noch der nicht gestritten hat (Bo.).
- 2. Welcher, welches, + which, who, that, always declines strong: Das Buch, welches ich geleien habe.
- 3. Wer, + who, whoever. The inflection is the same as that of the interrogative: Wer es (aud) jei, whoever it be.
- 4. Bas, + what, whatsoever. The inflection is the same as that of the interrogative: Bas er (aud) fagen mag, no matter what he says.

Indefinite Pronouns and Indefinite Numerals.

- 94. Underer, andere, anderes, + other, different: der andere, die andere, das andere, die anderen. Declined like any adjective, used substantively and adjectively.
- 95. Giner, eines, + one, the numeral with its derivatives fein, none, and einige, generally only plural "some."
- Gin- is always strongly inflected and stands only substantively. Standing adjectively it is declined like the indefinite article (see 39). With def. art.: ber cinc, die cincu.

Rein is inflected like the indefinite article, but stand substantively is declined feiner, keine, keine vir Meister geboren (Prov.).

96. Etlid-, some; etwas, anything; wer, anybody; was, anything, something; weld-, some, any; cinia-, some.

Ettich- and welch- are always inflected strong. The singular of ethen is rare, having the force of "tolerable," "some": mit etlichem Erfolge, with some success.

97. Compounds with je: jeder, every, each; jeglid, jederer (= jeder) stand adjectively and substantively; jedermann, everybody; jemand, anybody; niemand, nobody.

Sever, jeglich, jedweder, each, every, are declined like strong adjectives. Seglich and jedweder are not common now; they have the same meaning. Sedermann has only a genitive singular in -3. Semand and niemand decline: N. jemand, G. jemand(c)3, D. jemandem, -den, A. jemanden.

If jeder, jeglich, jedweder are preceded by the indef. art., they are declined like any adjective preceded by ein, e. g. ein jeder, eines jeden, einem jeden, einem jeden.

The accusative and dative are N. H. G., taken from the adjective inflection. Though the classics are full of these cases, the best usage for the spoken language favors no case-ending for accusative and dative.

- 98. Man, one, any one. It is only nominative. The other cases are made up from cin- or wir. Man is old spelling for Mann, from which in M. H. G. it was not distinguished. Its corresponding possessive is sein: Man glaubt ihm nicht. Man tann seinen eigenen Kopf nicht essen (Prov.).
- 99. Nicks, nothing, allows of no further inflection. It is itself the genitive of M. H. G. nuhl = ni-wiht and nio-wiht. Compare Eng. naught = na-wiht. Nicks, the genitive, stands for the emphatic combination nihtes niht, "not a thing" = gar nicks.

Bu nichte, mit nichten, "not at all," show still that nicht was once a noun fully inflected: Besser etwas tenn nichts (Prov.).

100. As indefinite numerals it is customary to classify all + all; beide + both; beides + each or either; ganz, whole; lauter, "nothing but;" mand; + many; mehr + more; mehrere, several; die meisten + most, the majority; die mehrsten (= die meisten); ein paar, a few, lit. "a pair;" sämtliche, all, altogether; das übrige, die übrigen, the rest; viel, much, many; wenig, little, sew; ein wenig, a little; genug + enough.

Of these, all, ganz, manch, viel, wenig may stand uninflected. Otherwise they are inflected like adjectives: Biel Steine gab's und wenig Brot (Uh.). Ganz Deutschland lag in Schmach und Schmerz (Mosen). Das ganze Deutschland soll es sein (Arndt).

Lauter, mehr, ein paar, ein wenig, genug are indeclinable.

7,657

CONJUGATION.

- 101. The verb varies for person and number; for tense (present and preterit) and mood (indicative and subjunctive). From the present stem are formed the imperative and the noun-forms of the verb, viz., the infinitive, present participle with the gerundive, and the past participle in -(c)t. According to the formation of the preterit we distinguish two great systems of conjugations, the "strong' and the "weak." The strong verbs form the preterit by substituting a different stem-vowel from that of the present, e.g., geten—gab, tragen—trug; the weak, by adding -(c)tc to the stem, e.g., leben—lotte, glauben—glaubte.
- 102. The infinitive, the preterit, and the past participle are generally given as the "principal parts" of a verb. The infinitive represents the forms with the present stem. Knowing the preterit or the past participle, one can tell whether a verb is weak or strong. If the preterit ends in -(c)te the past participle ends in -(c)t; if the preterit is strong, the past participle ends in -en, e. g., sagen, sage, geigger, saugen, sog, geiggen.

The infinitive and the past participle help form the compound tenses.

103. The following paradigms show the various inflections:

	WEAK	STRONG.				
PRESE	ent.	PRETERIT.	PRESE	NT.	PRI	TERIT.
Ind.	Subj.	Ind. and subj.	Ind.	Subj.	Ind.	Subj.
ich lube	lobe	lobte	finge	finge	sang	fänge
du lobst	lobest	lobtest	fingst	fingest	fangst	jängest
er lobt	lube	lobte	fingt	finge	jang	jänge
wir loben	loben	lobten	fingen	fingen	fanger	ı jängen
ihr lobt	lobet	lobtet	fingt	finget	sangt	fänget
fie loben	loben	lobten	singen	fingen	janger	ı fängen
	Imp.	Inf.		Imp.		Inf.
2. sg. lobe (du)		loben	2. sg.	fing(e) (d	u) (ingen.
1. pl. loben wir		Pres. part.,	1. pl.	fingen wir		Pres. part.,
2. pl. { lob(e)t (ihr) { loben Sie		(Gerundive. lobend Past part. gelobt	2. pl. {	fing(e)t (i fingen Sie	hr) ji	Terundive, Ingend Past part Jefungen

104. The personal suffixes are:

- Sq. 1. p. -c. except for strong preterit.
 - 2. p. -(e)st for both tenses and moods.
 - 3. p. -(e)t for the present indicative. In the pres. subj. and in the pret. ind. and subj. the 3. p. is like the first.
- Pl. 1. p. -(e)n for both tenses and moods.
 - 2. p. -(e)t for both tenses and moods; also for the imperative.
 - 3. p. -(e)n for both tenses and moods.

The retention or rejection of the thematic or connecting vowel -e- is treated later. Sec 118.

Imperative. The 2. p. sg. ends in -r in all verbs 105. excepting those strong ones that have the interchange of e-i or e-ie in the 2. and 3. p. sg. pres. ind., e. g., Traue, ichaue, bete, bitte, grabe, hebe, but sprick, fris, nimm.

- 106. Infinitive. It always ends in -cn except in those weak verbs in which it is preceded by -cf, -cr: wanten, wantern; also in fein, thun, which are non-thematic verbs. See 449. 2.
- 107. Participles. The present part and the gerundive always end in -ent: heffent, helfent, ein Liebenter, ein zu beweisenter Sat, a proposition to be demonstrated. They are declined like adjectives.

The past participle is formed by the prefix gc-, and the suffix -(c)t for weak verbs, the suffix -cn for strong ones: lieben — geliebt, blättern — geblättert, tragen — getragen, fingen — gejungen.

108. (Se-does not stand:

- 1. Before heißen, lassen, sehen, helsen, ternen (?), lehren (?), hören, when an infinitive depends upon them in a compound tense: Ich habe ihn gehen heißen, kommen lassen, sagen hören. For lernen and lehren, gelernt and gelebrt are better usage.
- 2. In the preterit-present verbs (= modal auxiliaries, see 134) which form similar past participles, viz., fönnen, türsen, mögen, müssen, sellen, wollen. Man hat das wilde Tier nicht sangen fönnen. See 113.
- 3. In the past participles of verbs having inseparable prefixes, e, g, verlaffen, entjagt, betedt, getadt, except fressen < ver + essen and verbs in which t and g are no longer felt to be the prefixes to and gc (see **543**), e, g., geiressen, geblichen < bleiben, geglaubt; geglichen < gleichen. See gegessen, **128**.
- 4. In verbs with the foreign ending—i'eren, e. g., marschieren marschiert; probieren probiert. Even when these are compounded with separable Germanic prefixes, they take no ge-: ausmarschiert, cinstudiert.
- 5. Forden < werden never takes ge-, when it is an auxiliary in the passive voice, e, g., Er ift gelobt worden.

Compound Tenses.

109. These are formed by means of the auxiliary verbs haven, icin, wereen; the last in the future active and the whole passive; haven and join in the active voice. As a matter of convenience the simple tenses of these auxiliaries are given here.

110.

PRESEN	NT.	PRET	ERIT.	PRE	SENT.	PRET	ERIT.

					Past 1	part.	worden

111. 1. Saten has contracted forms for the 2. and 3. pers. sing.: haf < h d s t < h a b e s t; hat < h d t < h a b e t. The pret. has undergone the same contractions: hatte < h d b e t c. The pret. subj. has unfaut due to the influence of strong and pret.-pres. verbs. In dialect the old con-

tracted forms with \hat{a} , prevailing through the whole present, are still heard. In M. H. G. haben as auxiliary has the contracted forms; as an independent verb, the uncontracted.

- 2. Berben is a regular strong verb of the 3. class. It is the only verb that has retained the two pret. vowels, generally the vowel of the sing. prevailing over that of the plural. Barb is more common as independent verb: purbe, as auxiliary. In elevated style warb is preferable.
- 112. The Perfect is formed with the present of haben or scin and the past participle, e. g., ich habe getragen, I have borne; ich sin gesahren, subj. ich sei gesahren, I have ridden. Perfect Infinitive: getragen baben, gesahren scin, to have carried, ridden.

The Pluperfect is formed with the preterit of haben or fein: ich hatte getragen, subj. ich hätte getragen, I had borne; ich war gesahren, subj. ich wäre gesahren, I had ridden.

- 113. The past participles without gr- accompanied by an infinitive (see 108, 1, 2), the modal auxiliaries and weak verbs which followed their analogy, form such tenses as these: In hate the green heißen, I have ordered him to leave. Sie haben einen Ross maden laffen, you have had a coat made or ordered a coat to be made. Der Knabe hat die Leftion nicht ternen fönnen, the boy has not been able to learn the lesson. Er hat er nur sagen hören, he has only heard it said. Der Rachbar hat den Bettler arretieren laffen wollen (or wollen arretieren laffen), my neighbor wanted to have the beggar arrested.
- 114. The Future ind. and subj. is formed with the present of werden and the infinitive, e. g., ich werde tragen, ich werde fahren, I shall earry, ride.

The Future Perfect is formed with the present of werren and the perfect infinitive, e. g., id werde getragen haben, id werde gejahren sein, I shall have carried, ridden.

115. The first Conditional is formed with the preterit subj. of werten and the infinitive, e. g., id wirte tragen or fahren, I should carry or ride.

The second or perfect Conditional is formed with the preterit subj. of werten and the perfect infinitive: it wurte getragen baten or gefatren fein, I should have carried or ridden.

Passive Voice.

116. The passive voice is formed by werten except in the imper. The tense of the auxiliary with the past participle of the verb forms the corresponding passive tense. Berren forms its compound tenses with join and werten.

PRESENT: ich werde gelobt, I am praised, am being praised.

PRETERIT: ich ward or wurde gelobt, I was praised.

PERFECT: ich bin gelobt worden, I have been praised.

PLUPERFECT: ich war gelobt worden, I had been praised.

FUTURE: ich werde gelobt worden, I shall be praised.

Future perfect: ich werte gelobt worden sein, I shall have been praised.

1. CONDITIONAL: ich würde gelobt werden, I should be praised.

2. or Conditional perfect: ich murte gelobt worden sein, 1 should have been praised.

IMPERATIVE: sei (du) gelobt, be (thou) praised.

seid (ihr) gelobt be (you) praised. seien Sie gelobt

Infinitive: gelobt werden, to be praised.

gelobt worden sein, to have been praised.

Weak Conjugation.

- 117. The weak conjugation forms the principal parts by suffixing to rete in the preterit: luben, lubte, retten, rettete; by prefixing get and suffixing to ret in the past participle: getweet, gerettet. For the simple tenses see 103, for the compound, 112-115.
- 1. Verbs of this conjugation are with few exceptions derivative verbs, and most of them can be recognized as such by certain marks of derivation, such as suffixes (-cin, -en, -igen, -ieren, -igen, -ieren, -igen, -igen, etc.).

 (But there are a few strong verbs with umlaut: tagen, trugen, gebaren, etc.).
- 118. 1. The connecting vowel always stands before t, whether personal suffix (3. p. sg. and 2. p. pl.) or in the participle and preterit, if the stem ends in b or t (th); if the stem ends in m and n, preceded by another

consonant which is not m or n, e.g., er rebet, ihr melbet, wir walteten, getröftet, er atmete, ich zeichnete.

Those in m and n have lost an e before these consonants. Compare them with their nouns: Atem, Beiden. Those in n are often treated like those in et, er, to which they really belong (see sub 3): zeidente, regente. But these forms are not elegant.

- 2. The connecting vowel stands in the 2. p. sg. present ind. also after stems in \hat{p} , \hat{p} , \hat{p} , \hat{p} , besides the stem-endings sub 1, e. g., bu recept, walter, following, reducil, reducil, refinely, fightly, faffer, widney, beigh, flutely.
- 3. Verbs in -cfn and -crn rarely show the connecting vowel c, e, g, if handelt, cr handelt, gelächelt, wir wanderten. In the 1, p, sg, present ind. and subj., in the imperative 2, p, sg, they generally lose their own c, e, g, ich wandle, wandle, chanciche (bu).
- 4. In solemn diction and in poetry any verb may retain the connecting vowel. On the other hand, the poet and the people take many liberties in the omission of it (sub 1 and 2). For instance, Das new Dans ift aufge right't (Uh.). Seib mir gegrüßt, befreund'te Scharen! (Sch.). Red'st du von einem der da ledet? (id.). Gegrüßet seib mir, edle Herrn! Gegrüßt ihr, schien Damen (G.). See F. 3216, 3557. In fact though such full forms as du siscest, rasest, fasses, du pussel, etc., are written, one generally hears du sischt, saßt, pußt, etc. This applies also to strong verbs, e. g., du möscht, stößt, reißt.
- 5. The present subj. nearly always shows full forms, but the preterit ind. and subj. have coincided: baß bu licbel, ihr licbel; baß ich licbe, redete.

Irregular Weak Verbs.

- 119. There are two groups of these verbs. One has a difference of vowel which looks like ablaut, the other has besides different vowels also a change in consonants.
 - 1. The stems show un or ut:

Inf.	Pret. ind.	Subj.	Past participle.
brennen	brannte	brennte	gebrannt
fenden	fandte	jendete	gejandt

Here belong brennen, + burn; tennen, to be acquainted with, + ken; nennen, + name; rennen, + run; jenden, + send; wenden, to turn, + wend, went. The last two have also a preterit ind. jendete, wendete.

The stems show uf, ug. Here belong:

Inf.	Pret. ind.	Subj.	Past participle.
renfen	rachte	dächte	geracht
dünfen	dendyte (däudyte)	deuchte	gevencht
	, deuchte (däuchte) dünkte	dünkte	gerünft
bringen	brachte	brächte	gebracht

Strong Conjugation.

- 120. Strong verbs must have different stem-vowels in the preterit and present, since in this way difference of tense is expressed. But the vowel of the past participle may coincide with that of the present, as in geten, gab, gegeben v, fahren, fubr, gefahren vi, halten, hielt, gehalten vii; or with that of the preterit, as in beißen, biß, gebißen i, biegen, bog, gebogen ii, glimmen, glemm, geglommen viii. The past participle ends in —en, and has the prefix ge—, e. g., gestohlen, gerusen. For simple tenses see 103.
- **121.** The personal suffixes are the same as in weak verbs. Compare lichte, lichtest, lichte, etc.; sab, sabst, sab, etc. The imperative 2, p. sg. has no ending when the present ind. has interchange of e-i, ie, e. g., ich berge, bu birgft, er birgt; imp. birg; brechen -brid; effen-iß. This interchange of e-i, it occurs in III 3, IV, V; in verbs which do not have it there is no difference of stem-vowel in the imperative and the present, c. g., baltenbalt: schwimmen - schwimm. But often e is added in analogy with weak verbs, always when the verb is either strong or weak, e. g., rufen - rufe vii; fchlagen - fchlage vi; always webe, bewege, erwage viii. In the last group there is of course no interchange of e-i, e.g., on bewegt, or bewegt. When the stem ends in t, -tet in the 3. p. sg. is contracted to single t, if the stem-vowel changes. M. H. G. giltet > gilt t > gilt. gelten — er gilt; fecten -- er fict; raten, rat; but reitet, ichneitet. Special mention is made of these peculiarities under each class and verb. The preterit subj. always has umlaut and

the 1. and 3. p. sg. end in c, e. g., ich fah, du fahft, er fah, etc.; but ich fahe, du faheft, er fahe.

The verbs are best classified according to the ablaut-series. (See 393.)

122. I. Class. Ablaut : et i, ie i, ie.

1. Division: ci i i.

The stem ends in \mathfrak{g} (\mathfrak{f}), \mathfrak{f} , \mathfrak{d} , \mathfrak{t} , \mathfrak{d} -t.

Examples: beißen, big, gebiffen; ichleifen, ichliff, geschliffen; schreiten, ichritt, geschritten; weichen, wich, gewichen; leiten, litt, gelitten.

The following verbs belong here: beißen, + bite: bleichen (intrans.), + bleach, but also weak, always when trans.; fid befleißen, to apply one's self; alciden, to be + like, strong since the 17th century, in the sense of + liken it is still weak, a N. H. G. distinction, M. H. G. only weak: gleißen, + glitter, nothing to do with the rare gleisen < gelihsen, to deceive, or entaleisen, to run off the track < Weleise, track; gleiten, + glide; greifen, to seize, + gripe; greinen, + grin, rare and generally weak, grinfen, its derivative, has taken its place; feifen, to quarrel, is strong or weak, < L. G.; freisen, to pinch, L. G. > N. H. G.; freischen and freisen, to scream, are related, both weak and strong, not H. G.: Iciten, to suffer. + loathe: pfeifer, to whistle, + pipe < L. pipare; reifer, to tear, + write, draw; reiten, + ride on horseback; foliciden, to sneak (+ slick and sleek); soleifen, to grind, + slip, weak in the sense of "to drag, raze"; soleifen, + slit, split; schmeißen, + smite, throw; schneiben, to cut; schreiten, to stride; spleisen, + split, L. and M. G.; streichen, to wipe, cross, +strike, etc., with very varying meanings; fireiten, to strive; weiden, to yield; compare weid, + weak, wicker; weak, it means to soak, soften.

2. Division : et ie ie.

Examples: gedeihen, gedich, gediehen; reiben, rieb, gerieben.

Here belong: bleiben, to remain (+ leave); gebeihen, to thrive, the part. has a doublet, gebiehen, thriven, gebiehen, solid, pure; leihen, to borrow, + lend; meiben, to avoid; preisen, + to praise, strong only since the 15th century, < Preis < M. H. G. pris < O. Fr. pris < L. pretium, analogous to Fr. priser; reiben, to rub (+ rive); sheiben, to separate; sheihen, + shine; shreiben, to write (+ shrive); shreien, to scream (?); shweigen, to be silent, weak in the sense of "to still a child"; spein, to spit, + spew; stigen, to climb; treiben, + to drive; weisen, to point out, in the 16th century still weak; seiben, to accuse (+ indict).

123. Notice the interchange of b-t in the first division, e.g., schneiden, schuitt, geschuitten; but not in the second, viz., metden, mich, gemieden; scheiden, schieden, geschieden. (See 416.) When the stem ends in \(\beta\) or \(\beta\), the 2. p. sg. present ind. is heard merely as ending in \(\beta\), whether spelt so or not. The full form -c\(\beta\) stands only in elevated diction, e.g., bu schmeißt, bessel, bessel big; bu weisest and weist, du preisest and preise. (See 118, 4.) Notice also the doubling of t and \(\beta\) in schreiten, schrift; streiten, strift; schleifen, schlisse etc.

124. II. Class. Ablaut: ie (ü, au) ŏ, ō ŏ, ō.
 1. Division: ie (au) ŏ ŏ.

The stem ends in § (if), &, f, b-t.

Examples : fliegen, flog, gefloffen; triefen, troff, getroffen.

Here belong: verbrießen, to disgust, vex; stießen, + flow (+ fleet); gießen, to pour; frießen, + to crouch, creep (?); genießen, to enjoy; rießen, to smell, + reek; schießen, + to shoot; schießen, to slip, rare, supplanted by its derivative schüßen; schießen, to close, lock; sprießen, + to sprout; trießen, + to drip; sausen, to drink (of animals); sießen, see index.

2. Division : ie, ü, au v v.

Examples : fliegen, flog, geflogen; trugen, trug, getrogen; faugen, fog, gefogen.

Here belong: 1. In ic: bicgen, to bend; bicten, to offer, + to bid; fliegen, + to fly; flichen, + to flee; frieren, + to freeze; flichen, + to cleave, split; finichen, + to shove; flichen, to scatter; verfieren, + to lose; gieben (309, 939300), to draw.

2. In ü: füren (fiesen), + to choose; lügen, + lie; trügen, to deceive.

3. In an: fangen, + to suck; fonauben (fonichen), to snort, L. and M. G.; foranden, to screw (+?), L. G. > late M. H. G.

2., 3. pers. sg. pres. show archaic forms sometimes in eu: seust, freucht, seust. (See 406.) Of those in au only sausen has umlant, viz., saust, faust. The stem ending in \$\bar{p}\$, the 2. p. sg. may be bu schickt, genickt. Notice the interchange of \$\beta_0\$ in sichen, 403, 3e30gen, but \$\beta\$ is silent. (See 416.) Notice also the doubling of \$\beta\$: sausen, seis, fest.

125. III. Class. Ablaut : ĕ, i ă ŭ, ŏ.

1. Division: i ă ŭ.

The stem ends in $n + \cos \theta$, (t, g, f).

Examples : binden, band, gebunden; fpringen, fprang, gefprungen.

Here belong: binden, + to bind; bingen, to hire, originally and still at times weak, the isolated weak past part bedingt is a regular adjective; bringen, to penetrate; finden, + to find; gelingen, to be successful; flingen, to be heard, resound; ringen, to struggle, + wring; fdinden, + to skin, pret. fdumb; fddingen, to twine, + sling, it also has the force of the now lost fddinden, to swallow; fdwinden, to disappear; fdwingen, + to swing, fingen, + to sing; finten, + to sink; fpringen, + to spring; flinten, + to stink: trinten, + to drink; winden, + to wind; awingen, to force.

2. Division: i ă ŏ.

The stem ends in mm and un.

Examples: spinnen, spann, subj. spänne and spönne, gesponnen; schwimmen, schwamm, schwämme and schwömme, geschwommen.

Here belong: beginnen, 4 to begin; rinnen, to flow, + run; sinnen, to think; sommen, + to swim; svinnen, + to spin; gewinnen, + to win.

3. Division: e-t ă ŏ.

The stem ends in l, $r + \cos$ except dresden.

Examples: helfen (bilft), half (hülfe, halfe), geholfen; werfen (wirft), warf (würfe), geworfen.

Here belong: bergen, to hide, + bury, burrow; bersten, + to burst; bressen, + to thrash; gesten, to be worth, pass for; bessen, + to help; schesen, + to scold; sterben, to die (+ starve); verberben, to spoil (intrans.); verberben (weak), to corrupt; werben, to enlist, woo; werben, to become, + worth (see 110); wersen, to throw (+ warp).

126. Notice the double preterits subj. (See 464, 3.) Sub 2, rinnen never has "ranne." The 3. division has generally and better û, because you cannot tell "hâtse" from "hesse" by ear. Treschen and bersten, once belonging to the next class, have brösche — braiche, bârste — bêrste.

The 2. and 3. p. sg. present ind. have i instead of c. (See 403.) As to the suffix, bersten has bu birst, birstest, er birst; gesten, bu gilist (pronounced gisst), er gilt; werden, bu wirst, er wird; swelten like gesten.

127. IV. Class. Ablaut: $\ddot{a}, \breve{e}, \bar{e} - \dot{i}, \dot{i}e$ \bar{a} \bar{o}, \check{o} .

The stem contains I, r, m after or before the root-vowel.

Examples: brechen (brichft), brach (brache), gebrochen; stehlen (stichft), stahl (ftable, stöhle), gestoblen.

Here belong: bridge, + to break; gebären, + to bear, bring forth; befehlen, to command; empfehlen, to recommend; eridgeden (eridged), to be frightened; nehmen, to take, + nim; fpreden, to speak; fleden, + to stick, stab; flehlen, + to steal; treffen (traf), to hit; fommen, fam, gefommen, + to come. (See 489, 1.)

Pefehlen and empfehlen belonged to the III. Class, and have double subjunctives, befehle — befahle, etc. So has fiehlen, fiehle — fiahle. The undant in geharen is only graphic for $\bar{c} < \bar{c}$. Those in -h and geharen have ic in 2, and 3, p. sg. present ind.: empfiehlt, gehiert. The rest have i: triffit, fprisht; to femmh, er femmt are quite common, but not elegant.

128. V. Class. Ablaut: i, č, ē — i, ie ā ē, ē.

The stem ends in any sound but a liquid.

1. Division: e,ē — i, ie ā ĕ, ē.

Example : geben (giebft, gibft), gab (gabe), gegeben.

Here belong: cffcn, + eat; fressen, + eat (said of animals); geben, + give; genesen, to recover; geschen, to happen; sesen to read; messen, + to measure, + mete; schen, + to see; treten, + to tread; vergessen, + to forget; (wesen) war, gewesen, to be, + was.

2. Division: i, ie ā ĕ, ē.

Here belong: bitten, bat, gebeten, to ask, + bid; liegen, lag, gelegen, + to lie: fiben, 198, geleffen, + to sit.

The form of the 2, and 3, persons sg. of the present ind, of verbs ending in § is -[it; of those in § is § for both persons: bu, cr iit, vergift, frifit; bu, cr lieft. But genefu, bu, er genefi, has no ic, probably because genieft would have coincided with geniefit < genefien, genefi, II.; bu fiteft may be contracted > fifft, pronounced merely, , iist." The participle of effen, viz., gegeffen, has ge-twice, because geeffen was contracted into geffen very early. This is now colloquial. (See F. 2838, 4415.) Notice bu tritli, cr tritt; bu bitteft, cr bittet.

129. VI. Class. Ablaut: \check{a} , \bar{a} - \ddot{a} u \check{a} , \bar{a} .

The stem-vowel is short before more than one consonant.

Example: baden, (badft), buf (bute), gebaden.

Here belong: bafen, + to bake, in N. G. generally weak; fahrer, to ride, + fare; graben, to dig; laben, to invite, and laben, + load; laben (strong),

+ to load, and laben (weak), to invite, have been confounded since early N. H. G.; they are of different origin; idaffen (iduf), to create (weak, "to work"); idilagen, to strike, + slay; tragen, to carry; wadjen, to grow, + wax; wasfen, + to wash; (stepen), slund, sland (stander, stander, estand, slund is still common in S. G.

Here belonged also formerly: hehen (hehft), hub, geholen, to raise, + heave; shwören (himörst), shwur—shwor, geschworen, + to swear. Fragen (frägst), frug (but never gefragen), "to ask," are frequently heard; also jagen (sägst), jug, "to chase." The forms are still frowned upon by grammarians because they are "wrong," but the people use them just the same.

In the 2, and 3, p. present ind, à is the rule excepting shaffen, shaffet, which is under the influence of the weak verb. Notice by and er wacht, by washing sprounded waight. Isolated participles: gemahlen, ground; mahlen is now weak, mahlen, mahlee, gemahlt, to grind; erhaben, lofty, < erheben, erhoben.

130. VII. Class. Characteristic is it in the preterit, which is no ablaut, while the past participle always has the vowel of the infinitive.

For convenience we make two groups.

1. Division. The seeming ablaut is: ă, ā ie ă, ā.

ă before more than one consonant, ie = short i before -ng.

Examples : fangen (fängst), fieng, gefangen; braten (bratft, brat), briet, gebraten

Here belong: blasen, + blow, + blare (?); braten, to roast, fry; sallen (sicl), + to fall; sangen (rarer sahen), to catch; (gehen), gieng, gegangen, + go, went, gone; halten, + to hold; hangen, + to hang; lassen, + to let, cause; raten, to advise; salsen, + to sleep.

Umlant is the rule in the 2. and 3. p. present ind. Notice bu raift, or rat; bu, or blaft; bu halff (pronounced "halft"), or halt; bu laffest or bu, or last. The umlant in this whole class is late; in later M. H. G. they have it rarely. The "Rules" prefer the spelling t to ic, viz., hing, fing, ging.

131. 2. Division: au, et, o, ū ie au, et, o, ū.

Here belong: hauen, hieb (b < w), gehauen, + to hew; laufen, lief, gelaufen, to run, + leap; beifen, hieß, geheißen, to call, command, + hight; floßen (fließ), to kick, thrust; rufen (rief), to call.

Only stopen and generally laufen take the umlaut : bu, er stopt : bu laufit.

Scheiben, once of this class, has gone into I; "gehießen," according to I, is sometimes heard, but must still be rejected as incorrect. Of this class there are a great many isolated participles of verbs that have changed conjugation, e. g., bescheizen, mode : (but beschieben, "ordered"); geschroten, rough-ground; gesalzen, + salt; gespasten, "split"; gewalzen, rolled, etc. Rusen, ruste, geruft is not correct.

132. VIII. Class. Characteristic is v in the preterit and past participle, long or short according to the following consonants.

The verbs belonging here are stragglers from all the other ablautseries. There must be therefore a number that are still afloat; that is, according to the usage of the period in which they are taken, they belong to their regular class or to this. Present usage in the spoken language always favors v - v, c.g., shwören, shwor, geschweren, vi; breschen, bresch, gebreschen, vi; bresch, bob, gesoven, vi, which have been assigned by us, however, to their proper classes. Lügen, II, and trügen, II, have sprung from tiegen and triegen under the influence of the nouns Lüge, Trug. They might be classed here; as also füren, II, for siesen; compare the noun sturs-surse, elector.

133. The vowels of the present may be c, i, a, ä, ö.

The ablaut is most frequently c v.

We count here: bellen (bellt, billt), to bark, III; fechten (fichtst, ficht), + to fight, IV, III; flechten (flichtst, pronounced flicht, flicht), to braid, IV, III; pfleach, to carry on, undertake, v, IV, in the sense of "to be accustomed," "to care for," always weak; melfen (melft and milft), + to milk III; quellen (quillt), to swell, gush, 111; focilen (foillt archaic), generally foulen the weak verb, "to resound," weak = to cause to resound, ring, III; famelia (schmilist, schmilit), + to melt, III; schwellen (schwillt), + to swell, III; weben (mebst), strong and weak, + to weave, v; bewegen (bewegst), to induce, weak = to move, v; glimmen, to glow, III, 2; flimmen, + to climb, III, 2; garen (gart), to ferment, also weak, IV; erwägen (erwägst), to consider; wägen or wiegen (if ic, II), mägst, wiegst, + to weigh (-mägen, miegen, -wegen are in M. H. G. the same word, v): raden (radt), + to wreak, sometimes has rod, geroden, but is generally weak, IV: erlösden, intrans., to die out (of a flame), (erlifdelt, erlifdt), but trans, löfden, to extinguish, III : permirren, to confuse, III, is generally weak, but has an isolated participle, verworren = intricate, complicated: force (foierst, foiert) + shear, IV, is sometimes weak.

ANOMALOUS VERBS.

I. The Preterit-Present Verbs.

134. To this group belong the modal auxiliaries and wiffen. They are originally strong verbs, whose preterits are used as presents. New preterits, past participles, and infinitives were formed weak. The infinitives, the present plural, and the new strong participle have the same vowel, sometimes with an irregular umlaut : fonnen (inf.), wir fonnen, fonnen (past part.). The different vowels of the present in the sg. and pl. neig. wiffen; the subjunct, with umlaut, mag, möge; the lack of t in the 3. p. sg., cr mag, are still traces of their strong conjugation. The weak preterit was formed without connecting vowel, and has umlaut in the subjunctive: mogen, mochte, mochte, gemocht. (See 119, 2, and 454, 3.) The strong participle in -en stands in the compound tenses, when an infinitive depends upon the auxiliary: ich habe schreiben muffen, but ich habe gemußt. An imperative, the meaning permitting, is made up from the subjunctive, e.g., wolle, moge.

135. 1. Wiffen, I, to know, + to wit (wot, he wist).

Inf.	Pret. ind.	Subj.	Participles.
wissen	wußte	wüßte	f wissend gewußt

The pres. ind. inflects: ich weiß, du weißt, er weiß, wir wissen, ihr wisse(e)t, sie wissen. Subj.: ich wisse, wisses, wisse, etc. Imp.: wisse wissen Sie.

2. Dürfen, III, to be permitted.

Inf.	Pres. sg.	Pret. ind.	Subj.	Past part.
dürfen	darf	durfte	dürfte	{ gedurft } dürfen

Pres. ind.: barf, barfft, barf, burfen, burfet, burfen. Subj.: burfe, burfet, burfe, etc.

3. Können, III, to be able, + can.

Inf. Pres. sg. Pret. ind. Subj. Past part. fönnen kann konnte könnte fönnte fönnen

Pres. ind.: fann, fannst, fann, fönnen, etc. Subj.: fönne, fönnest, fönne, etc. Imp.: fönne, fönnt, fönnen Sic.

4. Migen, v, IV, to be able, + may.

Inf. Pres. sg. Pret. ind. Snbj. Past part.
mögen mag mochte möchte fiendet

Just like fönnen.

5. Sollen, IV, + shall.

 Inf.
 Pres, sg.
 Pret, ind, and subj.
 Past part.

 jollen
 jolle
 jollte
 gejollt

 jotten
 jotten

Pres. ind .: joll, follft, foll, follen, etc.

This is almost entirely weak now. The vowel-difference in the presence been levelled away. Comp. Eng. shall, should.

5. Müßen, vi, + must.

Int. Pres. sg. Pret. ind. Subj. Past part.
müffer muß mußte müßte finüffen

Pres. ind. muß, mußt, muß. Subj.: muffe, etc.

This too is almost entirely weak.

7. Wollen, 1, + will.

Inf. Pres. sg. Subj. Ind. and subj. Pret. Past part.
wollen will wolle wollte gewollt
wollen

Pres. ind.: will, will, will, wollen, wollt, wollen. (See 472, 2.)

II. The verbs $g \in \mathfrak{hn}$, + to go, $\mathfrak{ft} \in \mathfrak{hn}$, + to stand, \mathfrak{thun} , + to do.

136. 1. Weh(e)n.

Pres. ind.: ich gehe, du gehst, er geht, wir gehn, ihr geht, sie gehn. Subj.: ich gehe, du gehest, er gehe, etc.

Imp. sg.: geh; pl., geht, geben Gie. Part.: gehend.

Pret. ind .: ich gieng. Subj.: ich gienge.

Part .: gegangen. According to vii; from a stem "gang."

2. Steh (e) n .

Pres. ind.: ich stehe, du stehst, er steht, wir stehn, ihr steht, sie stehn. Subj.: ich stehe, du stehest, er stehe, etc.

Imp. sg. : fteb; pl., ftebt, fteben Gie. Part .: ftebend.

Pret. ind.: ich ftant (ftunt). Subj.: ftante (ftunte).

Part.: gestanden. According to vi; from a stem "stand."

3. Thun.

Pres. ind.: ich thue, du thust, er thut, wir thun, ihr thut, sie thun. Subj.: ich thue, du thuest, er thue, wir thun, ihr thut, sie thuen.

Imp. sg.: thu; pl., thut, thun Sic. Part.: thuend.

Pret. ind.: ich that, du thatst, er that, wir thaten, ihr thatet, sie thaten. Subj.: ich thate, du thatest, er thate, etc.

Part .: gethan.

The full forms with $\mathfrak c$ of these three verbs are not used in the indicative. The $\mathfrak h$ is merely graphic, and is not pronounced, e.g., id goes is not $\mathfrak g\mathfrak c$ - $\mathfrak h\mathfrak c$, but $\mathfrak g\mathfrak c$ or $\mathfrak g\mathfrak c'\mathfrak c$.

137. The compound verbs are not inflected differently from the simple verbs. Notice the position of the separable prefix, and ge- in separable compound verbs: ich schriebe an, schriebe an; imp. schriebe (tu) an, ich habe angeschrieben, ich werbe anschrieben. The separable prefix stands apart from the verb in the simple tenses (pres. and pret.), but only in main clauses; ge-, zu- stand between prefix and verb, angeschrieben, anzuschreiben. Ex.: 3ch schriebe, schriebe ten Brief ab, but während ich ten Brief abschriebe (dependent clause). In inseparable compounds notice the

participle has no ge: ich verstehe, verstand, habe verstanden, werde verstehn. (See 108, 3.)

1. Notice a class of inseparable compounds derived from compound nouns. These have gc. They can be easily recognized by the chief stress falling on the first element: but Frü'hhlüd, verb frü'hhüden, frühhlüdic, gefrühflüdt, to breakfast; ber Ra'tschlag, verb ra'tschlagen, ratschlagte, geratschlagt, to take council.

138. Additional examples of verb inflections.

- 1. Strong presents with the second persons sing, and pl. of the imperative.
- a. ftreiten, strive, I.; ich ftreite, bu ftreitest, er ftreitet, wir ftreiten, ihr ftreitet, sie ftreiten; ftreite, ftreitet.
- b. bitten, ask, V.; ich bitte, du bittest, er bittet, wir bitten, ihr bittet, sie bitten; bittet, bittet.
- c. tragen, carry, VI.; ich trage, bu trägft, er trägt, wir tragen, ihr traget, sie tragen; trage, traget.
- d. raten, advise, VII.; ich rate, du rätst, er rät, wir raten, ihr ratet, sie raten; rate, ratet.
 - 2. Reflexive verb: fid fehren, to long.
- a. Present: ich sehne mich, du sehnst dich, er sehnt sich, wir sehnen uns, ihr sehnt euch, sie sehnen sich.
 - b. Perfect: ich habe mich gesehnt, du hast dich gesehnt, er hat sich gesehnt, wir haben uns gesehnt, ihr habt euch gesehnt, sie haben sich gesehnt.
- 3. Separable compound and reflexive verb: sich anmelben, announce one's self.
- a. Present: ich melde mich an, du meldest bich an, er meldet sich an wir melden und an, ihr meldet euch an, sie melden sich an.
- b. Perfect: ich habe mich angemelbet, bu hast bich angemelbet, er hat sich angemelbet, wir haben uns angemelbet, ihr habt euch angemelbet, sie haben sich augemelbet.

FIRST PART SECOND SECTION.

SYNTAX

SYNTAX.

139. For practical reasons we divide the Syntax into Special and General Syntax.

The Special treats of the function of the word, inflected or uninflected, in a sentence.

The General treats of the combination of words into a sentence, of the word-order, and of the combination of clauses into a compound sentence.

It is of course difficult to keep these two divisions separate, as in fact all the different branches of grammar. Thus the separation of inflection and function, of phonology and inflection, of word-formation and syntax is a violent one. The division into special and general syntax is the custom of French grammarians, who have succeeded best in freeing their grammatical system from the strait-jacket of Latin and Greek grammars.

SPECIAL SYNTAX.

The parts of speech are treated here in the same order as they are in the Accidence.

Syntax of the Article.

140. The use of the demonstrative pronoun as definite article is much older than that of the numeral "cin" as indefinite article. "Ein" was used where the definite article could not stand; hence the plural of cin Mann is still Männer. In O. II. G. the article is still lacking; its use spread in M. H. G., so that now it is almost a necessity.

Some General Cases of Absence of the Article.

- 141. Proper names, names of materials always when preceded by nouns expressing quantity and measure, have no article. Ex.: Goethe erreichte ein hohes Alter. Schiller starb verställnismäßig jung. Blei ist weicher als Gold. Ein Pfund Zuder.
 - 142. No noun preceded by a genitive can take an article: de Denkens Faben ist zerrissen (F. 1748). Der alten Götter bunt nimmel (G.).

- 143. There is no article before nouns (connected by und, weter, noch or unconnected) in certain set and adverbial phrases; in an enumeration of objects belonging to the same class or genus. Ex.: Gelv und Gut. Haus und Hof. Mit Gott für König und Baterland. In Saus und Braus. Sinn und Berstand verlier' ich schier (F. 2504). Nicht irdisch ist tes Thoren Trant noch Speise (F. 301). Soll ich mit Griffel, Meißel, Feder schreiben? (F. 1732). Urahne, Großmutter, Mutter und Kind in dumpfer Stude beisammen sind (Schwab). Zu Tisch, zu Bette, Haus an Haus, Stein auf Stein, nach Osten, gen Süden, von Norden (but notice im Osten, im Süden, etc.
- 144. All pronouns exclude the article, except sold, mand, weld, was für, which allow an indefinite article after them, and all(e), which allows the definite article after it; e.g.: Was soll ter Schmerz und Lust (G.). Weld ein geschäftig Volf eilt ein und aus (id.). Was für ein Landsmann bist du, Jäger? (Sch.).
- 145. An abstract noun, and any noun denoting profession, rank, position have no article in the predicate after neuter verbs; e. g.: Philotte't, der ganz Natur ist, bringt auch den Neoptole'm zu seiner Natur wieder zurück (Le.). Heiße Magister; heiße Doctor gar (F. 360). (Ich) bin Soldat, komme niemals wieder (Sch.), Eng., I am a soldier.
- 146. 1. In technical phrases some nouns and adjectives used as such take no article: Schreiber dieses, the writer of this; Mäger, plaintiff; Besagter; Gedachter; Obiges; Folgendes, etc. In headings: Ueber Anmut und Bürde (Sch.). Casusschre, Flerionslehre.
- 2. In folk-lore and folk-songs: Rottappchen, Little Red Riding-hood; Schneewitten. Anabe fprach: ich breche bich. Röslein sprach; ich steche bich (G.). Thurchen fnarrt. Mäuslein pfeift.

Article with Proper Nouns.

- 147. The rule is: no article before proper nouns just as in English.
 - 1. Names of persons may take an article when the bearer is

well known and his name has become a common noun; to express familiarity and intimacy, also contempt; to mark gender and case more clearly (this applies also to names of places and countries); when the author's or artist's name is used for his work; before names of planets, of ships, of the characters of a play, of titles of books taken from a person. Ex.: Ein Baihington, der Belfe, die Ottonen. Schiller's Tell and Wallenstein, Goethe's Götz and Lessing's M. von Barnhelm are full of examples of the second use (familiarity, etc.). Die Büfte des Sofrates. Bär'ich tem Ferdinand gewesen, was Octavie mir war . . . (Sch.). Läßt sich nennen den Ballenstein (Sch.) (contempt). Tevrient spielte den Nathan. Mein Freund hat den Coret verfaust (painting by Corot). Der Herfules ist beschätigt.

- 2. Names of countries and provinces which are not neuter take the definite article. Most of these are feminine and a few masculine, viz., compounds: ter Breisgau, Rheingau, ter Suntgau; also ter Hagy (+the Hague); ter, tas Elfaß. Feminines in -ei: die Türfei', Wallachei'; in -au: die Moltau, die Betterau; in -marf: die Neumarf, die Oftmarf; die Lauss, die Schweiz, tie Krimm, die Levante, die Pfalz. Some neuters in -land: tas Bogtlaut, das Wendtlaud, die Niederlaude, pl.
- 3. Name of oceans, lakes, straits, rivers, mountains, and forests always have the definite article, e. g., das Mittelmeer, die Ostie, der Borensee, der Belt, der Sund, der Rhein, die Donau, der Harz, der Spessat, die Alpen, der Schwarzwald.
- 4. Names of the seasons, months, days of the week, of the streets of a city: "Der Winter ist ein Ehrenmann" (Claudius). In Januar, des Sonntags, auf or in der Kaiserstraße, im Frühling.
- 148. Appellatives have an article as in English: die Thräne quillt, die Erde hat mich wieder (F. 784). For exceptions see 141-146.
- 149. Abstract nouns have no article when they denote a characteristic or state of mind: Mut zeiget auch ter Mamelud;

Gehorsam ist bes Christen Schmud (Sch.). Freude war in Troja's Hallen (id.) Krieg ist ewig zwischen List und Argwohn (id.). But when they denote an act or motion they are treated as appellatives. They may also take the article that has generalizing force, e. g., Der Tod ist der Sünden Sold (B.). Die Wahl sieht dir noch srei (Sch.). Die Kunst ist lang und furz ist unser Leben (F. 558-9). Die Botschaft hör' ich wohl, allein mir sehlt der Glaube (F. 765). Das war ein Schuß! (Sch.).

- 150. Names of materials have the generalizing article, which denotes the whole kind or substance, or an article that singles out a certain kind or quantity, e. g., Ter Bein erfreut tes Menschen Herz (B.). Tas Golt ist tostbar. Die Steinschle ist schwarz over braun. Without article: Silber und Golt habe ich nicht (B.). Blut ist gestossen (Sch.). Laß mir ten besten Becher Weins in purem Golte reichen (G.).
- 151. Collective nouns take an article except when taken in a partitive sense: Was rennt das Bolf? (Sch.). Weit dahinten war noch das Juhvolf (id.). Wir haben Juhvolf und Reiterei (id.).
- 152. All classes of nouns qualified by an adjective, by a genitive, by a relative clause, etc., take an article in the singular, excepting names of materials and nouns in the vocative, in the predicate or in certain adverbial phrases. The plural has the definite article or none. Ex.: Ter fleine Gott der Welt bleibt stets von gleichem Schlag (F. 281). Ter Gott, der Eisen wachsen ließ... (Arndt). Die Hauptstatt von Frankreich. But (Sie) sprachen laut voll hohen Sinns und Gesühles (G.). Nach alter Weise. Es gab schönre Zeiten als die unsern (Sch.). Der alte Barbarossa (Uh.).
- 153. The genitive preceding a noun always has the article except a proper name: In tes Marmore falte Bangen (Sch.). In des Baldes Mitte (id.). Schiller's "an Ufer's Nand" Goethe would have made a compound, "Ufersrand." Comp. "Berges» höble" and other compounds of Goethe.

- 154. The definite article stands for an Eng. possessive pronoun, when the possessor cannot be mistaken. There may or may not be a personal pronoun as object in the sentence. Ex.: Der Kopf that mir so web (Song). Habt ihr mir ten Finger blus genommen? (Sch.). (Sie) rührt ihm leise tie Schulter (H. and D. 4, 63). See 243, 3.
- 155. 1. In S. G. the definite article is always applied to members of the family instead of the possessive pronouns. In N. G., as in Eng., no article is necessary: Grüß' ben Bater und Baters Brüber! (Sch.).
- 2. As with proper names so names of materials and abstract nouns often have the definite article in the genitive and dative merely to show the case: for Mild Baffer veryichen.
- 156. The definite article is used in German for the indefinite in English in a distributive sense: Butter festet anterthalb Mark tas Psunt, a pound; tieses Indy testet 90 Psennig(e) tie Esle; sünsmal tas Jahr or im Jahre. This "a" in Eng. represents the preposition "on," and is not the indefinite article.
- 157. Ein can stand in German before certain indefinite pronouns and neuter adj, where it does not stand in Eng.: cin jeder, cin jeglicher, cin folder, cin mancher (better manch ciner); cin festes, = a fixed sum; cin mehreres, = more; cin wentags, = little. Sch schreibe nächsten ein mehreres.

Repetition of the Article.

158. Before each of several nouns of different gender the article must be repeated if it stand at all: Ter Vater, die Mutter die gingen vor des Hauptmanns Haus (Song). If two nouns, connected by und, denote different persons the article should be repeated: Ter Onfel und Pathe des Kindes war bei der Taufe zugegen (one person). But der Onfel und der Pathe . . . (two persons).

Both rules are often offended against by Luther, Goethe, and Lessing, and frequently in the spoken language: Wenn man ben Maler und Dichter mit einander vergleichen will . . . (Le.).

The article before an apposition is treated as in English.

SYNTAX OF THE GENDER.

- 159. The grammatical gender of nouns is threefold, masculine, feminine, neuter. As to living beings, the nouns denoting males are masculine, and those denoting females feminine. Ex.: der Huchs, Löwe, der gute Mann, Neffe, Knecht, Ochs, Bod; die Kuh, Ziege, Base, schöne Magd, die Sau, Stute.
- 1. Exceptions: nouns denoting the young of animals, diminutives, and bas Weib, bas Menfd (see 59), bas Frauenjimmer are neuter. Ex.: bas Ferfel, Füllen, Ralb, Mäbden, Fräulein.
- 2. Any grammatical gender is ascribed to the names of the species without regard to sex. Nenter: bas Pferd, bas Schwein, bas Schaf, bas Rch. Fem.: bic Nachtigall, Ameise, Biene, Mand, Ratte. Masc.: ber Fisch, Dase, Dacks, Lucks.
- 160. Where the grammatical gender does not coincide with the natural, the following rules may be of service, based on the meanings of nouns and on their derivation. See 159, 1.

GENDER ACCORDING TO MEANING.

1. Masculine are:

The names of the points of compass, of the winds, seasons, months, days of the week; of mammals (a few small ones like die Maus, die Ratte excepted), most of the larger birds, most fish, and stones.

Ex.: ter Nord or Norden; Sommer; Februar, Augu'st; Montag, Sounabend; ter Escl, Löwe, Elesant; der Strauß, Abler, Storch; der Hai, Aal, Karpsen (all compounds with —fist), of course, as der Walfisch, Klippenssich); der Ktesel, Diama'nt, Feldspat.

2. Feminine are:

The names of most rivers, trees, plants, and flowers (in -e), insects, small singing birds, and nearly all derivative abstract nouns.

Ex.: die Weser, Oder, Elbe; die Eiche, Tanne, Buche; die Nelse, Rose, Rübe, Ressel, Kartossel; die Ameise, Wanze, Biene; die Nachtigall, Schwalbe, Lerche; also die Krähe, Eule. Die Liebe, Tugend, Jugend, Demut, Freundlichkeit, etc.

3. Neuter are:

The names of places and countries except those always having the article (see 147, 2), collective nouns (particularly those with (%c-); most names of materials including metals, of the letters of the alphabet; other parts of speech used as nouns, particularly adjectives not denoting persons (see 169).

Ex.: "tas schone Spanien," "ein klein Paris," tas Bolk, heer, Gebirge, Geschüp; tas holz, heu, Schmalz, Obst; tas Eisen, Blei, Kupfer, Jinn; tas W, Y; tas Bummeln, "Das Wenn und tas Aber," das Gute, das Wahre, das Schone.

REMARK.—So many rivers are feminine because they are compounded with -aha (+ Lat. aqua): Befer and Berra < Weserâ(h), Werraha; tie Zalja(h). But notice ber Abein, Main. Die Schweiz, Türlei have the article really on account of their exceptional gender. American rivers are masculine: ber Subson, ber Mohawt.

161. GENDER ACCORDING TO DERIVATION AND ENDINGS.

1. Masculine are:

Most monosyllabics by ablaut, e. g., her Spruch, Spruß, Stich, Schirm; those in -cr, -ler, -ner (denoting agents); in -cl (denoting instrument); all in -ling; many in -cn; dissyllabics in -c according to the n-declension (denoting living beings); in -ich.

Ex.: der Schreiber, Künstler, Pförtner; der Deckel, hebel, der Fremdsling, Günstling, Säugling; der Segen, Degen; corresponding to Eng. -om, Busen, Besen; der Knabe, Löwe, Bote; Günserich, Wütesrich, Fittich.

2. Feminine are:

Many dissyllabics (by ablaut, see 496) in -e; abstract nouns in -e, mainly from adjectives; in -ie, mostly foreign; many in

-t; all in -ci, -in, -ung, -heit, -feit, -jchaft; some in -niv and -fal; foreign ones in -age (see 163, 5).

Ex.: die Größe, Sobe; die Sprache, Gabe: die Philosophie, Galansterie; die Haft, Macht, Kraft; die Jägerei, Juristerei, Melodei; die Freundin, Lehrerin; die Duldung, Widmung; die Freiheit, Frömmigsfeit; Freundschaft; die Wildnis, Fäulnis; die Blamage, Courage.

3. Neuter are:

All in -chen, -lein; most in -sel, -sal, -nis, -tum; nearly all of the form Ge-e or Ge- without e; some in -cl.

Ex.: tas hüntchen, Knäblein; tas Nätsel, Überbleibsel; tas Schidssal, Labsal; tas Gerächtnis, Bermächtnis; tas Königtum, Christentum (only two mase., ter Neichtum and Irrtum); tas Gesilte, Gemälte; tas Gebilt, Gesichte; tas Büntel, Gesintel, and the S. G. diminutives tas Nintel, Lübel, etc.

On the whole the gender of nouns has changed very little in the history of the language. Ex. of changes are: bic Sittle < O. H. G. der situ, already M. H. G. sometimes din site. The Plane was O. H. G. both mase, and fem. The Fahne was O. H. G. der fano.

162. The following groups of nouns have varying genders, though some are of the same origin and have the same meaning. They should be fully treated in the dictionary, to which the student is referred. Only a few examples are given in each group.

1st group. The same form and meaning, but double gender (m. and n.); ber and das Meter, Thermometer, Barometer, Bereich, Schrecken, Beng, etc.

2d group. Double gender (m. and f.) with varying forms, but the same meaning and origin: ber Schurz — bie Schürze; ber Trupp — bie Truppe; ber Quell — bie Quelle; ber Spalt — bie Spalte.

3d group. Double gender, the same form in sg. and pl. if the plural be formed of both genders, but of different meaning and sometimes of different origin (the latter with *).

All adjectives: ber Gute, + the good man; bie Gute, + the good woman; pl. bie Guten.

der Heide, heathen	die Scide, heath	pl. die Beiben
*ber Bulle, bull	bie Bulle (document)	die Bullen
ter Erbe, heir	bas Erbe, inheritance	bie Erben
der Berbienft, carnings	das Berdienft, desert, merit	bie Berbienfte
*der Weisel, hostage	die Geißel, scourge	die Weißeln —feln
*der Meffer, measurer	bas Meffer, knife	Die Meffer

There are perhaps forty in all.

4th group. Double gender, double plural, but different meaning and sometimes different origin (the latter marked *). Perhaps a dozen or more.

ber Pand, volume	pl. Bände	bas Band, ribbon	pl. Bänder
*ter Marich, march	Märsche	bie Marfc, marsh	Marschen
der Schild, shield	Schilde	bad Shilt, sign-board	Shilber
*der Thur, fool	Thoren	bad Ther, gate	Thore

GENDER OF FOREIGN WORDS.

163. Foreign words retain generally the original gender: the Prin < L. pxna, later $p\hat{e}na$; that $f(x) = \int_{-\infty}^{\infty} dx = \int_{-\infty}^{\infty} d$

Many have changed gender for various reasons. They were fully Germanized and followed German models according to ending or meaning, or they followed French (Romance) rules. Some changes are difficult to account for.

- 1. Examples of neuter nouns that became masculine, masculines that became neuter, and feminines that became neuter: btr Pala'ft, < pulatium; btr Balfam, < balsamum; btr Mantel, < mantellum; btr Preis, < pretium; btr Punft, < punctum. Neuter nouns in -at: bas Kenfula't, < consulatus; bas Forma't, formatum or -us; bas Nies, < V. L. risma (f.); bas Kreuz, < cruo(em) (f.).
- 2. Examples of nouns that have changed gender in analogy with German words similar in meaning and ending: ber Biegel, < tegula; ber

Marmor, marmor, n., on account of her Stein (see **160**, 1); her Körper, < corpus, n.; her Kaba'ver, < cadaver, n., on account of her Leih, her Leih-nam, and the many masculines in -er; hie Nummer, < numerus, since hie Aahl. Europa, Sparta, Athen, Troja, now all neuter (see **160**, 3).

- 3. Nouns in -arium, -orium, -erium, -are, became all masculine in analogy with H. G. words in -cr, < ære < ari: ber Mta'r, < altare; ber Meller, < cellarium; ber Pfalter, < psalterium; ber Beiber, < O. H. G. wiwari < vivarium; ber Piaster, < It. piastra, f., < V. L. plastrum.
- 4. Neuter nouns, whose plural ended in -a in (Ir. or L., became feminine in German from analogy with feminines in -c, < a, and also through Romance influence: bit Bibel, < biblian, V. L. biblia; bit Drgel, < organum, -a; bit Pfünde, < V. L. provendu (pl.); bit Studie, < studium; bit Prämic, < premium.
- 5. Words in -a'ge, masculine and feminine in French, are all feminine in (i., e. g., die Baga'ge, die Blama'ge, die Coura'ge, etc. Die Schrift, < scriptum, die Pacht, < pactum, are due to analogy with (i. nouns in -t, viz., die Reacht, Sicht, Schicht, Macht, etc.

GENDER OF COMPOUND NOUNS.

164. Compound nouns have the gender of the last noun: ter Birnbaum, tie hausthür, tas Schilderhaus, das Francuzimmer (lady).

EXCEPTIONS: a. Many compounds with -mut; bic Demut, bic Behmut, bic Sanfimut; but ber Dechmut, ber Freimut, etc. They are, however, only seeming exceptions, -mut going back to compounds with O. H. G. and M. H. G. -muot, m., and -muoti, f. This has given rise to the double gender of the same noun: O. H. G. hôhmuoti, f. only, but M. H. G. hochmüete, hochmuot, f., and hochmuot, m.; bic Demut, < M. H. G. diemüete, diemuot, always feminine: ber Aleimuut, bie Annut, bie Großmut; also ber Großmut; always ber Dochmut. For Armut, which is no compound with -mut, see 511.2. a.

- b. Der Abscheu seems an exception, because die Scheu is old and more common than der Scheu.
- c. Names of cities and places are neuter even if ending in nouns of different gender: bas shours, Lineburg, Lineburg, Annaberg, etc.; but bie Bartburg, Perrenburg, because these are eastles, = Burgen, f., and not towns.

- d. Der Mittwoch (Boche, f.) appears by the side of the legitimate bit Mittwoch, already in M. H. G. It has followed the other days of the week, which are all masculine. (See 160, 1).
- e. Die Antwert had double gender in O. H. G., but the neuter was more common. Luther has still bie and bas Antwert.

CONCORD OF GENDERS.

- 165. This subject can be best treated under the head of concords as between noun and adjective, noun and pronoun, subject and predicate. The general rule that adjectives and pronouns take the grammatical gender of the noun to which they refer is only set aside when the grammatical gender does not coincide with the sex. In that case the pronoun or adjective can take the natural gender.
- 166. Mäbden, Mägblein, Weib, Fräulein admit of this construction according to the sense, most commonly; not so, Kind, Frauenimmer, Männlein, Söhnlein, and the other diminutives: Und schnell war ihre Spur verloren, sebald das Mädden Abschied nahm (Sch.). Sened Mädden ist's, das vertriebene, die du gewählt hast (II. and D., IV. 210). Du gebenedeiete unter den Beibern (B.). Sie unglädlicher, Sie unglädliche, you unhappy man, woman. The adjective therefore also agrees with the sex.

Francin and the diminutives of names of females have "bic" sometimes in colloquial language: bic Francin, bic Sephic'hen, bic Derthen (Dorothy). But "Ihre Francin Tohter" is quite common and correct: Ihre Francin Tohter... war anogelassen (unrestrained) (4.).

- 167. Names in the predicate, not capable of forming a feminine from a masculine, like Lehrerin < Lehrer, Versteherin < Bersteherin < Bersteher, of course retain the grammatical gender, no matter what the sex of the subject: Sie ward... gleich mit besonderer Achtung als Gast behandelt (G.). But even predicate nouns capable of forming a seminine by suffix if used in the abstract sense, and not the personal, form an exception, e. g., Herr, Meister sein or werden, "to be or become master of." Denn ich bin euer König (Sch.). Sie war der Verbrecher (id.).
- 168. The neuter pronouns (cd, jeted, tad, alled, etc.) may refer to a mase, or fem. noun, even to the plural and to a mase, and

fem. noun together: Sie kommen herver ein Weib da, ein Mann . . . das rect nun, es will sich ergehen sogleich, die Knöchel zur Runde, = they stretch their bones for the dance, enger to enjoy themselves (in Goethe's "Totentanz"). Alles rennet, rettet, flüchtet (Sch.). Da mag denn Schmerz und Genuß, Gelingen und Verdruß mit einander wechseln wie es kann (F. 1756-8). Stillschweigend börten sie (three persons) zu, indem jedes in sich selbst zurückselvte (G.).

169. When adjectives are used substantively, the masculine and feminine denote sex, the neuter an abstract noun or thing: ter Gute, tie Gute, the good man, woman; tas Gute, the good (abstract). Krumm' herab, v helte Schüne, und verlaß tein stulzes Schluß (Sch.). Du hast herrliches vollbracht (id.). Das Böse, tas ich nicht will, tas thue ich (B.).

SYNTAX OF SINGULAR AND PLURAL.

- 170. Names of persons and materials can take a plural only when they denote several persons, species, or kinds, viz., die Henriche, die Berthas, die Öle (the various kinds of oil), die Gräfer, die Eette, die Salze.
- 171. Abstract nouns do not as a rule admit of a plural, but as in English the plurals of such nouns were once quite common, viz., Minne, Gnate, Econne, Hult, Chre. Some of these plurals are left in certain phrases: in Chren, 3n Chren; von Wottee Gnaten; 3n Schulten fommen laffen, to be guilty of; Ew. Gnaten; the herridajten. Compare Eng. thanks, loves (in Shakspere), favors, regards.
- 172. To the sg. -mann in composition corresponds often -leute, pl. only, which in sense really corresponds to Mensch, Menschen, without regard to sex. Examples: Edelmann Edelleute, gentry; Landmann, peasant, Landleute, country solk: Edelmann, married man, Edelleute, married people; but the pl Edelmann manner "; Fuhrmann Fuhrleute, drivers, carters; Raufmann Raufleute, merchants, etc. But Biedermann, hon-

est man; Chrenmann, man of honor; Staatsmann, and a few more, form only the regular plural in -cr.

173. For certain nouns which form no plural, plural compounds are used, some of which have also a singular.—E.g.:

bas Feuer	die Feuersbrünfte	
der Tod	die Todesfälle	
ber Rat	bie Ratschläge	
ber Dank	bie Dantsagungen	

174. Nouns only used in the plural are:

- a. Diseases : Blattern, Mafern, Röteln.
- b. Certain dates: Oftern, Pfingsten, Weibnachten, Ferien, Fasten, in Wochen in childhed.
- c. Names of relationship: Eftern; Øcbrüber, brothers, as Øcbrüber Ørimm, the brothers Grimm, but generally only in the names of firms; Øcfdwifter, brothers and sisters, rarely in the sg. brother and sister; other nouns as Øcfifter, Brieffdaften, Einfünfte, etc.
- 175. Mase, and neuter nouns denoting quantity, weight, extent, preceded by numerals, stand in the singular, but fem. nouns (except Mart) in the plural as in Fag., e. g., 6 Glas Bier, 10 Jaß Wein; "an die dreimal hunderstausend Mann" (Song of Prince Eugene), 5 Juß tieß, 3 Mart 70 Piennig(e), $70 \times 7 =$ siedenzig mal sieden mal (B.). Feminines: 3 Meilen breit, 10 Flaschen Portewein, 12 Stunden. The coins, das Jahr, der Monat, Schritt generally stand in the plural, e. g., 50 Psennige machen 5 Greschen, 3 Dusaten, 20 Schritte lang; yet also sing., "90 Jahr—gebüdt zum Lode"; 7 Monat(e) alt; but zehn Mart.
- 176. In older German the plural was used in all genders just as in Eng. That the singular was ever used came from the analogy of mase, nouns and "din mare" with the neuter nouns, in all of which sing, and pl. would not be distinguished. See 431, 2. The fem. of the n-declension never followed this analogy. For Mann see 59. Compare the Eng. "a ten-year-old boy," now colloquial. "Year" is an old plural just like Sabr. In the D. pl. the coins, etc., in 175 almost always have cu.
 - 177. Notice the use of the singular in German for English plural in

such phrases as: unter bem vierten und fünften Grabe nördlicher Breite (Hu.); ber erste und der fünste Bers wurde(n) gesungen; die drei Schüler mussen gur Strafe die hand auf den Mund legen; viele haben das Leben verloren, many lives were lost or many lost their lives.

SYNTAX OF THE CASES.

NOMINATIVE.

- 178. The nominative is the ease of the subject and of direct address: Mein Freunt, die Zeiten ber Vergangenheit sind und ein Buch mit sieben Siegeln (F. 575-6). Mit end, herr Doctor, zu spazieren ist ehrenvoll und ist Gewinn (F. 941). Absolute N. 297.
- 179. Neuter verbs and verbs in the passive voice which govern two accusatives in the active, are construed with a predicate nominative. See 270.
- Such are: 1. Sein, werben, bleiben, binten, scheinen, heisen (to be called), gelten, wachsen, sterben, etc.: Des Simmels Bügungen sind immer die besten (Le.). Aller Tod wird neues Leben (He.). Er wird ein großer Prinz die an sein Ende scheinen (Sch.). Das allein macht schen den Weisen, der sich jeder dünst zu sein (Le.). These verbs denote a state or transition. Preceded by als the construction may be called an apposition: Allein er start als Christ (F. 2953). Ich tomme als Gesander des Gerichts (Sch.). Er gilt als ein reicher Mann, He passes sor . . .
- 2. Verbs of calling, thinking, making, choosing, scolding, viz., genannt, gebacht, angesehen, gemacht, betrachtet, gewählt, gescholten werben, und others: Withelm von Dranien wird ber Schweiger genannt, Wilhelm von ber Normandie, ber Eroberer. Er ward ein Dieb gescholten, als ein Tangenichts betrachtet. Ich barf mich nicht bes Glüdes Liebling schelten (Körner).

GENITIVE.

180. The genitive is used chiefly as the complement of nouns and adjectives, but also of the verb (object). The genitive with nouns expresses the most varied relations. The principal ones are briefly given and illustrated below. German does not differ from other languages.

- 1. G. of origin, cause, authorship, relationship: Das Bunter ift bes Glaubens liebstes Kind (F. 766). Goethes Faust. Die Früchte bes Baumes.
- 2. Subjectioe G.: Die Liebe Gottes, welche hoher ift benn alle Bernunft (B.). Der Gefang ber Bögel. Das ift ber Rampf ber Pferbe und Fische (Hu.).
- 3. Objective G.: Der Anblid biefer Wegenb (Hu.). Die Erfindung ber Buch-bruderfunft.

The personal pronoun is rarely found in this construction. Instead of "bic Liebe sciner" stands bic Liebe zu ibm, acqun ibm.

- 4. Possessive G.: Des Fatums unsichtbare Sand (Sch.). Der Garten bes Königs. Dech besser ist's, ihr fallt in Gottes Sand als in (die) der Menschen (Sch.). Sometimes the possessive pronoun is put after the G. in colloquial language. Lessing has it several times: Das schien der alten Artisten im Geschmaß nicht zu sein (Le.). See 242, 2.
- 5. A. of quality or characteristic: Der Jüngling eblen Gefühles (II. and D., IV. 66).

This G. and the preceding stand also in the predicate after neuter verbs: Selig sind, die reines Hernend sind (B.). Einer Meinung sein; des Tedes sein. Ein solcher Wasserstand war also eines Alters mit den rohen Denkmälern menschlichen Runftsleißes (Hu.).

- 6. Appositive or specifying G.: Der Febler bes Argwohns; bas Lafter ber Trunffucht; bie Gunde ber Undantbarfeit. Rarl erhielt ben Beinamen bes Großen.
- This (I. and that of characteristic are frequently supplanted by von + Dative: Eine Eiche von hohem Alter wurde vom Blibe getroffen. Dieb von (einem) Bedienten; Tenfel von Weibe (Le.). See Prepositions, 303, 15.
- 7. Partitive G., dependent upon nouns of quantity, weight, measure; with numerals, various pronouns; comparative and superlative. Ex.: That nichts (= no matter). Er (der Mantel) hat der Tropfen mehr (Le.). Nun der Bescheibenheit genug (id.). Dem reichte sie der Gaben beste, der Blumen allerschönste dar (Sch.). Fünf unsers Ordens waren schon . . . des sühnen Mutes Opser werden (id.). Lasst mir den besten Besder Weins in purem Golde reichen (G.). Du schlugst dich durch mit hundert achtzig Mann durch ihrer Tausend (Sch.). Unser einer sann sich das nicht leisten, = "One like (of) us cannot afford that."
- 181. In the spoken language and also in the classics (excepting poetry) this partitive G. has passed into mere apposition; especially after nouns of weight, measure; after numerals; after night, night, and the indefinite pronouns. Ex.: Gin Pfund Thee; brei Scheffel Mern. Etwas Schönes, nights Böses, viel Gutes are no longer selt as genitives. The adjec-

tive used as noun is governed independently of the pronoun or numeral. Ex.: Jeigt das verfälichte Platt nicht, man wollt zu nichts Unter und verbinden? (Sch.). Das fönnte zu etwas Schrecklichen fübren (id.). From Luther to Lessing this G. is still quite frequent, and it still remains in certain phrases, e.g., hier ift meines Pleibens nicht, "I cannot stay here." Viel Aufhebens machen, "to make much ado." Venn ich mit Menschen und mit Engelzungen redete und hätte der Liebe nicht . . . (B.), literally "and had nought of charity." It is supplanted by von, aus, unter + D. See Prepositions, 303. Wer von uns, unter nus?

Genitive Dependent upon Adjectives.

- 182. It stands after adjectives denoting possession and interest or lack and want; fulness or emptiness; knowledge or ignorance; desire or disgust; guilt or innocence; e. g., fäbig, *habbait, sider, teitbaitig, unfäbig; bar, *los; *voll, *jatt, seer, quitt, versustig; sunvig, *gewahr, unsunvig; *müte, begierig; sidustig, letig, etc. Ex.: Des langen haters müte (Bü.). Des Veibes bist in letig (id.). Des Gerndts sidustig (B.). (hengste) begierig tes Stalles (H. and D., VI. 313). Sie stut voll süßen Weins (B.). In bist es toch zufrieden, Ritter? (Le.).
- 183. The adjectives marked * and others not given admit also of the accusative. In the last illustration wer was felt as A., and therefore was is much more common. See Pronouns, 199, 2. E. g., 3d bin bas fatt, mübe, "I have enough of it," am tired of it."

The prepositions nach, ven, etc., + D. frequently supplant the genitive, e,g., "begierig nach bem Statte" would be commoner; well, rein sein von envas.

Genitive after Verbs.

184. It may stand as nearer object, as remoter object, and adverbially.

As direct object after verbs with meanings similar to the adjectives in 182; also acten, warten, harren, potten, lachen, ichnen genießen, sterben, pflegen, tenten, vergessen, lohnen, verschlen, brauchen, and others.

Ex.: Das Bergismeinnicht. Ich benfe bein (G.). Hungerd flerben. Das lohnt ber Mühr nicht, = It is not worth the trouble. (Es find nicht alle frei die ihrer Ketten spotten (Le.). Gebraucht ber Zeit, sie geht so schnell von hinnen (F. 1908).

185. After verbs governing an A. of the person the G. of the thing stands as remoter object, such as judicial verbs, those with privative meaning, verbs of emotion; after many reflexive verbs with meanings similar to the adjectives in 182, c.g., 3ciben, vertlagen, freijprechen, bejoulvigen, berauben, entlaren, entlaffen, entbinven, überheben, versichern, belebren, mahnen, and others; sich freuen, bediesnen, erinnern, schämen, besticsnen, erinnern, schämen, besticken, erfrechen, sich webren.

Ex.: Entlast mich meiner Abnenvrobe, ich will euch eurer wiederum entlassen (Le.). Wer fann mich einer Sünde zeihen? (B.). Jemand des Landes verweisen; eines Verbrechens antlagen, überführen, etc. Entschlage die aller schwarzen Gedanlen (Le.). Du darsst die deiner Wahl nicht schwen (Sch.). But many of these genitives are supplanted by auf, über + A., and by A. alone.

186. Certain impersonal verbs expressing feelings, which are construed with the Λ of the person feeling and with the G of the cause and object of the feeling.

Ex.: Es ekelt mich, es reut, erbarmt, jammert, verdricht mich; es lebnt sich. Darob erbarmt den Hirten des alten beben Herrn (Uh.). Und da er das Boll sabe, jammerte ibn desselbigen (B.). But the nominative supplants here the A. of the person, and the A. the G. in the spoken language as a rule; "es" was again selt as A. See 183. Ex.: Das gereut mich, dauert mich. Der Gerechte erbarmt sich seines Biches (B.).

Adverbial Genitive.

187. It expresses place, time, manner, and other adverbial relations.

Ex.: Place: linfer Hand, rechter Hand, aller Orten, "everywhere." Sch möchte (it is not likely that . . .) biefed Beged febald nicht wieder fommen (Le.).

Time : biefer Tage, bes Abends, "bes Morgens in ber Frühe."

Manner: treduct Außes, dry-shod; stebenden Außes, immediately; vernünstiger Weise, reasonably. Sie samen unverrichteter Sache gurud, they returned without having accomplished their object. A large number of these genitives have passed into adverbs, $e.\ g.$, flugs, receivs, mergens, abends, nadmittags.

For genitive after Prepositions, see 302.

Genitive in Exclamations.

188. Interjections are followed by a genitive only when it denotes the cause or occasion of the exclamation. Level and web(e) have often a dative of the person and a genitive of cause or origin: D tes Franzosen, ter feinen Verstand, dieses zu überlegen, sein Herz dieses zu fühlen gehabt hat (Le.). D tes Glüdlichen, dem es vergönnt ist, ein e Lust mit euch zu atmen (Sch.).

DATIVE.

- 189. It is the case of the indirect object, less remote than the genitive. The nearer object can also stand in the dative, but is more remote than the nearer object (the direct one) in the accusative.
- The dative stands as nearer object after intransitive verbs denoting: 1, approach and removal, similarity and dissimilarity; 2, pleasure and displeasure; 3, advantage and disadvantage; 4, command and obedience; 5, vielding and resistance; 6, belonging to, agreement, trust, etc. A large number of these verbs are compounds, viz., those with cutver-, ab-, an-, auf-, bei-, ein-, mid-, nach-, vor-, voran-, witer-, gu-, and those with noun, adjective, or adverb: Icit thun, mohl= wollen, fauer werben, guftatten tommen, weis machen, zu teil werben, bas Wort reten, "to defend," etc. 1, naben, nachgeben, begegnen, gleichen, abueln, zuseben, entsprechen, fehlen, entgeben, nachsteben; 2. gefallen, tanten, genügen, behagen, bultigen, mißfallen, ichmeicheln, laffen (to look), troben, grollen, fluden; 3, belfen, nüben, bienen, beifteben, frommen, mehren, icacen; 4, gebieten, befehlen, boren, geborden, folgen; 5, weichen, willfabren, witersteben, witerstreben, tropen; 6, antworten, erwicdern, geboren, eignen, beistimmen, gureden, trauen, glauben, vertrauen.

Ex. : Des Lebens ungemischte Freude ward feinem Sterblichen zu teil (Sch.). Straftofe Freiheit fpricht ben Sitten Sohn (id.). Du rebest ihm bas Bort, anstatt ihn anguflagen (id.). Das Steben wird ihm fauer, It is hard work for him to stand. 1. Du gleicht bem Beift, ben bu begreifft, nicht mir (F. 512). Das gwingit bu ihr (ber Ratur) nicht ab mit Sebeln und mit Schrauben (F. 675). 2. Ginem Birte läßt nichts übler als Neugierde (Le.), Nothing looks worse in a host than curiosity. So fluch' ich allem, was bie Secle mit Lod und Gaufelwerf ummannt (F. 1587). Der Landvogt grollte bem Tell. 3. (Sie) wehret ben Anaben, she restrains the boys (Sch.). Der Knappe folgt bem Mitter. Gett bilft benen, bie fich felber belfen. 4. Soll ich gehorden jenem Drang? (F. 631). Du folgst mir boch bald nach (Sch.). Weborft bu bir ? (id.). 5. Und bie Webilte ber Racht meichen bem tagenben Licht (id.). 2Bohl weißt bu, bag ich beinem Born nicht trope (id.). 6. Franc, Schaue wem. Wem eignet Gott (Le.), To whom does God belong, = Who possesses him exclusively? Compound verbs: 3d habe bir nidt nachaestellt (F. 1426). Gebr gern ftebt Rarles bem Mini'fter nach (Sch.). Die Rönigin fab bem Rampfe gu (id.).

- 191. After transitive verbs the indirect object stands in the dative and the direct in the accusative (see 198): Berbülle mir tas mogente Getränge (F. 61). Das Menjdenrecht, tas ibm Natur vergönnt (F. 136).
- 192. A dative still farther removed from the verb is the ethical dative, or dative of interest (on the part of the speaker or hearer). It is generally a personal pronoun.

Ex.: Gebt mir, nichts weiter baven (Sch.), "Go, I tell you, no more of that." Mir zu Liebe, for love of me. Ihm zu Ebren. (Sie) find bir gar locker, leichte Gesellen (Sch.). Die Ubr feblägt keinem Glüdlichen (id.).

193. After impersonal verbs: es abut, beliebt, ekelt, gebt, feblt, gebricht, es graut, grauset, gelingt, liegt (mir) an etwas, sommt (mir aus etwas) an, schautert, schwintelt, träumt, ziemt, and many verbs in 190 can be counted here: Tem Bater grauset's (G.). Es liegt mir viel baran, I care much for it. Dem Kaiser ward's sauer in Hit und in Kälte (Bü.).

Dative after Adjectives.

194. These have meanings similar to the verbs in 190, e. g., angenehm, ähnlich, eigen, feind, folgsam, dienstbar, gnädig, hold,

nachteilig, verbunden, zuträglich. Ex.: Das sieht ihm ähnlich, = that's like him. Auch war der Ansang ihren Wünschen hold (Sch.). Die meisten sind mir zugethan (id.), "devoted."

195. Substitution of preposition + case, both after verbs and adjectives.

Für, auf, an, gegen, über + accusative, mit and von + dative may replace the dative: Ich gürne auf bich, ich glaube an bich, vertraue auf ihn; bin freundlich gegen bie Armen. Der Anzug (suit) ift febr passend für bich, etc.

196. Verbs with unsettled constructions.

With a number of verbs usage is either unsettled or the classics still show two cases, while the spoken language has settled upon one, e.g., now only es taught mir, but es bunt mid, classics have D. or A. after either. Glauben with D. only, or an + A.; but F. 3438: 3d glaub' ibn (Gett) nicht. Es efelt mir and mid. Man begahlt ten Anech (person), das Bret (thing), tem Bäder das Bret. 3d rufe dir, I call out to you; id rufe did, I call you, etc.

197. The few reflexive verbs after which the reflexive pronoun stands in the dative are really transitive verbs, and the pronoun is the indirect object: Er bifect fit etwas cin, "he imagines something," "is conceited." 3th tarf mir femcideln (Le.); but see 190, sub 2: 3th tark mir tie Sade fo.

ACCUSATIVE.

198. The accusative is the case of the direct object after transitive verbs, including many inseparable compounds of intransitive verbs with be-, ent-, er-, ver-, zer-, turch-, binter-, über-, unter-, um-, voll-, wieter-; such as befabren, befolgen, befolden, entiraten, entiraten, entiraten, erfiben, erfabren, erfinten, verlacken, vertreiben, zerftreuen, turchje'geln, binterge'hen, überje'hen, umge'ben, vollbri'ngen, wiederbo'len.

Ex.: Ihr seht einen Mann wie anbere mehr (F. 1874). Berachte nur Bernunft und Biffenschaft (F. 1851). Die Rüben baben mich vertrieben (Folk-song). Coof bat die Welt umsegelt. B. Tansor hat den Faust übersetzt.

199. Two accusatives may stand, one of the person and one of the thing, after verbs meaning to ask for, to inquire,

teach, to eause to do a thing or have a thing done, and similar ones, e. g., fragen, lebren, lassen, bitten. Ex.: Wer lebrte bich biese gewaltigen Worte? (Le.) Vebre mich thun nach beinem Wohls gefallen (B.) (thun = second acc.). Wollen Sie ben Arzt nicht tommen lassen?

1. After frager, bitten, überreden, bereden, the two necusatives stand, as a rule, only when the accusative of the thing is a neuter pronoun, c, g,, idb bitte, frage bid chas, nidts, vict. If the pronoun is lacking, then fragen nad + D, bitten um + A, überreden von or at + D, or the G, without preposition is the prevailing construction: Saû tu nad ibm gefragt? Ad have ibn darum gebeten.

Lügen strasen, Bunder nehmen govern an Λ , of the person: Tax nimmt midt Bunder, "I wonder at that."

- 2. But these pronouns, tae, nichte, viel, stand for old genitives which were felt as accusatives. The construction was: 28unter minimt mich ted or tejien, wonder seizes me on that account. (See 186.) Yagen is probably a G. of cause: Jemant wegen ter Yagen fraien. Yernen for lebren, though found in Goethe, is wrong.
- 200. Notice a choice of construction in certain cases, when the personal object is further defined by another case or preposition and case. The verbs that concern us here are such as judgen, treffen, trefen, freden, and similar ones.
- 1. Dative of the person and accusative of the affected part: 3d majde mir tie hante or meine hante.
- 2. Dative of the person and preposition + A.: 3d trete ibm auf ten duß, schlage ibm in's (Vesicht.
- 3. Accusative of the person and preposition + A.: Wir idlagen ten seint and's Sanst. Wir treten tie Eddange and ten stevi. The choice is between 2 and 3. But 2 is preferable after intransitive verbs; 3 after transitives.
- 201. These accusatives are both object-accusatives, but after verbs meaning to name, scold, regarding, and others of similar meaning, the second accusative is a predicate or factitive accusative, while the first is direct object, c, g, after namen, whether, whimpion, alauben, taujen, beijen (trans.).

- Ex.: In tiefster Seele schmerzt mich ber Spott ber Fremblinge, die uns ben Bauernabel schesten, "who call us by the nickname of 'peasant nobility'" (Sch.). Die Treue . . . ist jedem Menschen wie der nächste Blutofreund, als ihren Rächer fühlt er sich geboren (id.). Noch fühle ich mich benselben, der ich war (id.). Ich achte ibn als einen Ehrenmann.
- 202. 1. After lassen + sein and werden a predicate Λ. by attraction is found instead of the predicate nominative, but the latter is the preservable construction, e. g., Pastas Bücklein deinen Freund sein (A.). Past dies Salle selbst den Schauplatz werden (Sch.). Fiesco V. 12. Mich lasst den ersten sein.
- 2. For the passive construction, see 179, 2. The verbs in 199, 1, may retain the accusative (pronoun), also lebren. This would also admit an accusative predicate noun in the passive: Tas Schlimmfte, was und widerfabrt, das werden wir vom Tag gelebrt (G.). Ich werde den Tang gelebrt. But it is best to avoid all these predicate accusatives. They sound pedantic. Better say: Ich babe Tangunterricht, Tanghunde. Ich werde immer wieder darnach gespragt, darum gebeten.
- 203. The inner or nearer object stands in the accusative called the "cognate." The noun has the same meaning as the verb. Its idea is generally included in the verb: Einen guten Kampi babe ich getämpit (B.). Eine Schlacht schlagen, beiße Thränen weinen, etc.; Karten spielen, Schlittschub lausen. Gar schien Spiele spiel ich mit dir (G.).
- 204. Notice that the noun is sometimes replaced by an indefinite pronoun, was, es, cins, etc. Compare Eng. "to lord it," the unclassical "to come it over somebody." Aber die Cifernati über Spanien gewann es diesmal über diese pelitische Sympathic (Sch.). Die Wötter balten es mit den Tarsfer sien (id.); sich was rechtes (aureche) lausen, bringen, tanzen, "to run, etc., a great deal." Lügen Sie mir eines auf eigene Rechnung vor (Le.). Ich schwaße eins mit (Le.). See also F. 3416.
- 205. After many impersonal verbs and some other verbs the logical subject stands in the accusative (see 186). The verbs denote states of the body and mind: es runter, juliaret, numert, frant, verricut mid.

Here belong also es gift, es bat, es fett, es gift: Dergleichen Stimmen gibt's (Sch.), "There are such voices." Es hat Gefahr, wenn wir nicht gehen, "There

is danger . . . ". Es sept Siebe, Sändel, Schläge, There is a fight, a quarrel going on, somebody is being whipped. Comp. French il y a. See 236,4.

206. After reflexive verbs the pronoun generally stands in the accusative: Entirolicie did. Bestine did no du bist (Sch.). But see 185 and 197.

Adverbial Accusative

- 207. It denotes measure (amount), time, and place.
- 1. It denotes measure after verbs like wirgen, toften, geften; after adjectives like lang, breit, both, alt, wert, etc.
- Ex.: Die Ruhe beines Freundes gilt es, "is at stake " (Sch.). Die Kiste wiegt brei Kilogramm, zwei Zentner, fünf Lot, etc. Die Brüde ist mehrere Tausend Aust lang, bundert sechzig boch und achtzig Fuß breit. Das Dorf liegt eine Stunde (an hour's walk) von ber Stadt. Friedrich ift einen balben Ropf größer als Dietrich.

The usage as to the case of the person with "festen" is unsettled: Ter Schery lester mich or mir viet Welv. Grimm's Dictionary favors the A.

2. It stands with verbs of motion to express the distance and the way, the noun being often followed by an adverb.

Ex.: Beide feinen Schritt gurud. 3mei Wanderer fiebt er bie Strafe giebn (Sch.). Es giebt ein Saufe bas ob're Thal berab (Uh.). Der Feld rollte ben Berg binab. Mit leifen Schritten schlich er seinen boien Weg (Sch.).

The A, of measure and distance supplanted the G, of an older period; that denoting the way is old. The G, still occurs frequently. See 181.

- 208. The accusative of time denotes the duration and the moment of an action. The former is often followed by an adverb, lang, turch, über. Ex.: Der Bote fann ten Angenblid bier sein (Sch.). Er schläft ten ganzen Morgen. Du bast es Jahre lang betacht.
- 1. Compare the G. of time (see 187), which denotes a repetition of the action or a custom. The A. denotes a definite point of time or fixed period: (Der) tieß Betfund' balten bes Mergens gleich (Sch.). Semadends Nach mittags baben wir feine Schule (we custom). Nächsten Mittwech baben wir feine Schule, Noch biese Nacht muß er Madrid verlassen (Sch.). The G. denoting duration of time is rarer now: Ein Gift bas neun gamer Jahre dauert (Le.). This may be partitive G.

Absolute Accusative.

209. This is generally accompanied by an adverbial phrase, and denotes that with which the subject is provided. Ex.: Bu Tionys, tem Turannen, iddid Möros, ten Told im Gewante (Sch.). Soon ten Hals entblößt, tuict' ich auf meinem Mantel (Le.).

SYNTAX OF THE ADJECTIVE.

210. The adjective may be used attributively, predicatively, and substantively: ter reide Nadbar; ter Nadbar ift reid; ter Reide.

Attributive Use of the Adjective.

- 211. Some adjectives are only or mostly used attributively, as: 1, the superlatives and ordinals; 2, certain adjectives derived from adverbs: biefig, tertig, feitherig, bisherig, e. g., tie biefige Beitung, but not tie Beitung ift biefig; 3, many adjectives in -ich, -lid -en: nortifch, irtifch, täglich, aufänglich, entlich, getten, feiten, filbern, gläfern; 4, the comparatives and superlatives in 76, 2.
- 1. If they do stand in the predicate, they must be inflected, and the norm may be understood, i,g,, the Yicferma of characteristic, not thinklide.

For the adjectives in | en and -ern, ven + noun is substituted, e,g,. (in Becker ven purem Gelve. But in poetry the adjective is found: | \mathbb{D} er \geq mbl if effendeinern (R.).

212. The attributive adjective is inflected and agrees with its noun in gender, number, and case: Mit jüßer Rest und frijdem Shaum but er mich webl genübret (Uh.). It may stand uninflected, however: 1. Before a neuter noun in N. (and A.) (very rarely before a mase, or fem.): Meine Mutter but mand gülten Gewant (G.). So ist ein putchärrisch Tier (F. 1167). Frequently in certain phrases like "bur Gelt", "cash"; "auf gut Glüd". Rare: Greß Macht und viel List (Lu.). Das Alter ist ein bössich Mann (G.); "fremt und fremter Steff" (F. 635.). 2. When it stands after the noun, mainly in poetry; commonly after coins, weights, and measures: Der Hauptmann führt im Schilt ein

Nöslein rot von Golte und einen Eber wilt (Uh.). Ein Schwarm von Gästen groß und klein (Bü.). Zehn Inß rbeinisch, fünf Psinne flämisch. In prose also, when the adjective or participle has adjuncts: Tort ein gutartiges, gesittetes Hantelsvolf, schwelgent von ten üppigen Früchten eines gesegneten Ileißes, wachsam aus Gesege, tie seine Weblstäter waren (Sch.). 3. Of two adjectives the first stands uninflected in certain set phrases; when the two express one idea; in poetry, very frequently in Schiller: Tie großberzeglich tatische Regierung; tas föniglich prenßische Zellamt. Weh tem, ter an ten würzig alten Hausrat ihm rübrt (Sch.). Ten salsch verräterischen Rat (id.). "In tie weit und breite Welt" (G.). Schiller has "tranrig sinstrer Argwohn"; "weltlich eine Kobeit"; "D unglückelig jammervolster Taa"; "mit gransam tenselischer Luft," etc.

- 1. Panter, and generally ritel, both in the sense of "pure," nothing but," also the adj. in er, 507, 2, are undeclined; Das if lanter Unium, Effet citel ungefauert Bret (B.). Der Molner Dem.
- 213. The attributive adjective is inflected weak after certain limiting words, viz., after the definite article and pronouns declined like it; after ein, fein, and the possessives, excepting the N. sg. of all genders and the A. sg. neut. and fem. Ex.: ter gute Apfelbaum (Uh.); air glüdlichen Stunte; ai jenem freben Ægite; eines schönen Æges; an einem langen Afte (Uh.); sein grünes haus (id.); eine arme Bäuerin (N. and A. sg.); ein seitenes Aleit (N. and A. sg.).
- 214. The adjective is therefore declined strong, when not uninflected (see 218) and when not preceded by any of the above limiting words, mentioned in 213, c. g., helte Schnüdt, jüßes Hoffen (Sch.). Stumme hüter toter Schüte (Platen?). Also after the uninflected pronouns weldt, jeldt, viel, wenig, mehr, etwas nichts, and after uninflected numerals. Ex.: Er gibt tem treuen hirten mandt blankes Stüd (piece of money) taven (Uh.). Weldt reider himmel (G.). Seldt treißlicher Monarch (Sch.) (see 216. 4; 221).

215. The syntactical distinction between strong and weak inflection of the adjective, though very old, is by no means clearly drawn even now. The oldest inflection of the adjective is the so-called "uninflected," identical with the strong noun declension. When the pronominal endings spread over the adjective declension, forming the present strong adjective declension, the adjective probably was still declined strong even after a pronoun (ad. article). Of this there are traces from O. H. G. down to the 17th century. The n-d-clension of the adjective is a characteristic of the Germanic languages. Having less distinctive and fewer endings than the strong, it is natural that the adjective should be declined according to it, when preceded by a word which had the strong endings. This has given rise to the syntactical distinction and to the feeling that two strong forms should not stand side by side. When an adjective became a substansive or was used as such, it was always inflected weak, with or without article. This explains 221, 1. In Gothic the present participle and the comparatives were always inflected weak. In O. H. G. appear only a few strong comparatives and superlatives.

216. Unsettled usage as to strong and weak forms.

- 1. The strong genitive sg. m. and n. turned weak in the 17th century, and this is now the prevailing form: "Hebes Mate" (Bü.); blut'gen Ruhms (Uh.). "Berte füßen Haude" (Sch.). The pronouns always remain strong, except jener, jeder, of which a weak form is rare, c. g., jeden Belts (Uh.); jenen Tags (Bü.). This weakening is due to the feeling, that two strong forms should not stand together. Sec 215, 217.
- 2. After personal pronouns the rule is strictly the strong form, as the pronoun is not a limiting word. But as early as M. H. G. weak forms begin to appear. Usage now favors: after id, du, cr (in address), mid, did only the strong form, e.g., "du starfer Königsschu" (Uh.); ich armer Mann; after mir, dir mostly the strong form; after wir, ibr the weak (if sem. always), e.g., Ber nie sein Bret mit Ibranen as... der semt end nicht, ihr himmlischen Mäche! (G.). In "Gegrüßt ihr, schöne Damen! (G.), the comma makes a difference. After uns and end (A.) strong and weak are equally frequent. After uns and end (D.) strong and weak coincide of course: Man sellte end schlechte stelle beistesten (arrest) sassen. End sauten Burschen ift jest der Bretsord böher gehängt.
- 3. In the vocative the rule now is strong form both in sg. and pl., e. g., Unverschämter! wenn bich jemand gehört hatte (U.). Du, armer Weist (Sh.). The plural is still found weak, but rarely, as: Lieben Freunde, es gab beff're Zeiten als die unjern (Sch.).
- In O. H. G. the weak form was the rule; in M. H. G., the strong in the sg.
 - 4. After certain pronouns, pronominal adjectives, and indefinite

numerals, such as solde, welde, einige, etside, alle, mande, seine, and others, there stands in the N. and A. pl. very frequently the strong form against the rule, but rarely in the G. pl. This strong form is the older. Even after diese and jene strong adjectives may be found in the classics. Ex.: Der Blumenhandler hat seine schone Resen mehr. 280 bast du selde bast versauste Birnen gesaust? After the G. pl. sweier and breier the weak adjective is frequent, but in the spoken language these genitives are very rare: der Antaus von zwei neuen Däusern or zwei neuer Däuser, and not zweier neuen (or -er) däuser.

- **217.** If two or more adjectives hold the same relation to the noun, they have the same inflection. If the second adjective, however, he more closely related to the noun, forming a joint idea, then it usually stands in weak form in G, and D, not in N, and Λ . It can often be formed into a compound noun, and has less accent than the first adjective: Er trafficite and mit intended more used (= Retwein); hie Felgen blutiger burgerfichen Rriege (-: Bürgerfriege).
- 1. After certain adjectives like felgender, obiger, erwähnter, gedachter, etc., the second adjective, as a rule, is inflected weak in all cases: Benanntes ummylößliche Pringip, obiger anertannte €ap.

The Adjective in the Predicate.

218. The predicate adjective is uninflected. If it stand inflected in the predicate, the noun is supplied and the adjective is looked upon as attributive: Tie Arait ift feward, affein the Luft ift groß (F. 2203). Tein Origonit ift ein schwieriges (supply "one"); "res Poligiften Les ift fein glüdliches."

The adjective (or participle) is also uninflected when it is an appositional or factitive predicate: Wir famen glüdlich an. Run, tas fint ich tumm (F. 961). Ter (Mante macht felig (B.).

.219. Certain adjectives are only used predicatively. Some of these are really nouns, like feint, freunt, beil, fibate, net, nüße, fibute. Others, originally adjectives or past participles, have been restricted to this use, like babbait, abbelt, getreft, anfibtig, verluftig. All of them have not yet become full adjectives; and many, if with adjective form, are of late derivation: abjecuitig, abbolt, abwentig, ausfintig, bantgemein. Ex.: Ottilie

tonnte bem Märchen nicht seine sein (G.). Ein schöner Mann, eine schöne Frau! ift ber Direktor glüdlich genug, ihrer habhaft zu werden, so . . . (id.). Die Ruechte wurden handgemein.

1. In O. H. G. the adjective in the predicate is still inflected, though not always. In M. H. G. it is rarely inflected. In N. H. G. volter and halber are stereotyped strong forms used for both numbers and all genders: Die Nacht ift halber bin (coll.); were Nachts um halber Zwölf" (student song). Beller Edmergen und Arantbeit (B.).

Substantive Use of the Adjective.

220. The adjective when used as a noun is inflected according to the rules already given for the adjective proper: Mit Aleinem fängt man an, mit Greßem bert man auf (Prov.). In Schwert an meiner Linken (Körner). Die Ersten werden die Letten sein (B.). For gender see 160. 3. No inflection is the rule in certain set phrases: Gleich und Gleich gesellt sich gern (Prov.). Jung und Alt, Greß und Klein, Reich und Arm, von Klein an, von Jung auf; also in the names of languages: Englisch, Transössich; mein geliebtes Teutsch (F. 1223). Wie beist dies auf Italienisch? Er bat von Kint auf Norwegisch gekonnt. Also of colors: Grün, Blan.

221. Usage admits of many irregularities.

- 1. The weak form in the plural when no article precedes as Betienten, Beamten, Sangen, or rarely the strong form in the singular like any feminine noun, invariable in the sg.: For Edene, instead of for Edene (G. sg.). See 215.
- 2. The strong or weak plural after alle, cinige, etfiche, etc.: alle Gelehrte, einige Gefandre.
- 3. After may, ciwas, vid, etc., the weak form is rare. See 214.
- 4 If an adjective precede an adjective substantive and is inflected weak, the latter is of course weak; if the adjective is inflected strong, then the substantive may be either strong or weak. The latter form is perhaps more common for the neuter, the strong certainly for the masculine nouns; Rein, sie (bas Beib) it, e helte Edmen, un Weielligfeit gemacht (G.). Die armen Berwandten sind gowöhnlich nicht willtemmen. Hochgestellte Beamte sind entlassen. Der neue Bedieme hat ein angenehmes Außere. See F. 11, 6842.

a. Do not confound has Redt, law—has Redte, the right thing; has Gut, property — has Gute, the good (abstract); (has) Schwarz, black (the color) — has Schwarz (the bull's eye of a target), etc.

Syntax of Comparative and Superlative.

- These may be used just like the positive, only that the superlative is never used predicatively, i. e., uninflected, excepting alterliebst, c. q., vie Blume ist alterliebst. If it stands in the predicate, it is always weak, being preceded by the definite article: Diefer Baum ift ter bodite or tiefer Baum ift am boditen. These two should not be used indiscriminately, however, as they too generally are in the spoken language. The first is the strictly relative comparison; it can be strengthened by aller-, e. g., ter bödigte von allen, ter allerbödigte. The prepositional superlative should only be used when not so much the objects themselves or different objects are to be compared, but the same objects under different circumstances of time and place. This is generally the "absolute" superlative, expressed by an adverbial phrase: Der Starte ift am machtigften alle in (Sch.), "The strong man is most powerful standing alone, unimpeded by the weak." Die Apfel find auf der fonnigen Seite des Gartens am reifften. 2018 Booth Richelien fpielte, mar bas Theater am vollsten.
- 1. The "relative" superlative is generally preceded by the definite article, the "absolute" has, as a rule, (in or no article. Goethe is very fond of such an absolute superlative: Gin alterticibles Mint, a most lovely child. Dies bentet auf ein hätestes (a very late) Ratheresianis (G.). Notice also: weil's die Benigsten tönnen (G.), because very sew know how; der dürst, die Eltern, die neueren Sprachen, and other examples. They show alsolute comparison with the definite article. The absolute superlative is best expressed by an adverb + adjective in the positive. The more common adverbs used are: sept, redt, böchst, außerst, überaus, c. g., eine böchst anachebme Überraschung, ein recht dummer Junge.
- 223. Any adjective can be compared by -cr, -cft, except those that are never used attributively (see 219) and a few whose form seems awkward, like function, herrist, but the latter

are not absolutely excluded. Affein, weiß Gott, sie war mehr schuld als ich (F. 2960).

224. When two qualities belonging to the same object are compared, moor, wenger, minter are now used, but the classics are still full of the comparatives in -cr.

According to Lehmann (L. Sprache, p. 206) Lessing uses mehr only once: Diefe Ausrufungen find rheterischer als gründlich (Le.). Present usage: Der Geselle ist weniger heimtücklich als dumm. Der Soldat ist mehr tapfer als flug.

- 225. Logically the superlative cannot be used of two objects, but it is so used much more frequently in German than in English, e. g., 3wci Söhne, weven sie den atteiten . . . mit einem Pfeile ersches (Le.).
 - 1. For the conjunctions tenu, als, after the comparative, see 333.
- 2. Notice the bold comparative in H. and D., IX. 311: Man, ift has Meine meiner als jenals. Such forms as her Deinigde, etc., at the end of letters are rare. Peiter is a comparative of Icib (adj.), which became a noun very early. Öfterer occurs in Lessing.

SYNTAX OF THE NUMERALS.

- 226. The cardinals, used attributively, are indeclinable now, except cin, eine, cin. The G. and D. of swei and trei now and then occur still: Zweier Zeugen Munt macht alle Wabrbeit funt (Prov.). (Here "weier" shows the ease; zwei Zeugen Munt would not be clear.) Zähle von eins bis buntert.
- 1. To express the year the cardinal is merely added to "im Jabr(e)" or to "in," as im Jabre addichn buntert ein unt addig, or shorter, in 1813. The cardinal shows the year, the ordinal the month: Withe fart ten 22ten März 1832. Sannever, ten (1.) ersten August 1881. The ordinals used only attributively, see 211.
- 2. The time is expressed in various ways. Answering to such questions as: Weiviel Ubr ift es, welche Zeit ist es or haben wir? wie ist es an ter Zeit? we say: Es ist zwöls vorbei, aber nech nicht eins. Es ist ein Viertel trei or aus trei, or ein Viertel nach (über) zwei (all mean a quarter past two). Es ist trei Viertel trei or aus

trei or ein Viertel vor trei, = a quarter of three. Es ist halb zwölf, = half past eleven, on the same principle as viertehalb (see 229). We can say: 20 Minuten nach zehn (past ten), zwanzig ver zehn (of ten). Ter Zug fährt 3 Uhr 20 Minuten nachmittags ab. Wir wollen uns um fünf treffen.

- 227. Used substantively the cardinals are more frequently inflected, having a plural in -c (see 429) and a dative in -cn (see 79): Es waren threr fünf(e), swif(e).
- 1. Colloquially this —c is very commonly used as far as 19 incl., even when the figure itself be meant, which stands in the feminine singular: Tick Adu(c) ift nidt gut gemadt. Dick Neun(c) fleht schief. Elf ift die Sünde. Elfe überschreitet die zehr Webere (Sch.).
- 2. Die Millie'n, die Billie'n, die Milliarde are regular nouns, and, unlike bundert and tausend, stand in the plural after the cardinals, e. g., die Millionen, but süns bundert, seds tausend. Das Sundert, das Tausend are common nouns, pl.: Sundert : hundreds, Tausende + thousands: e. g., au Sunderten, a hundred at a time; bei Sundertausenden die Menscha drücken (Le.).
- 228. "Beite" corresponds to Eng. "both" in form and use: It was Piere an teiten Augen blint? It may have the definite article before it: tie beiten Rübe, "both the cows."
- 1. The singular beit- means "either," "each" (of two). Beites läßt fich beien either statement is reasonable; tas Menemall unter beiter Gefalt, the communion in either form; but the mase, and fem, are archaic. Tem zu einem greßen Manne gebert beites: Meinigleiten als Meinigleiten und wichtige Dinge als wichtige Dinge als wichtige Dinge als wichtige on behandeln (Le.). Beites has supplanted beite, beidin (pl.), which are still common in the 16th and 17th centuries.

Notice beid: 3 - und both - and. Beides, ein löblider Renig und madbiger Edwinger ber Lang (Bü.).

229. 1. Peculiar are the compounds of the ordinals with bath following them and fell preceding them: Vict(c)halb (3½), neunt(c)halb (8½), meaning cas vierte nur halb or weniger ein halb, das neunte nur halb. Preixelntehalb Kah = 12 Kah aber das 13te nur halb. Ags., Icelandie, Danish, and L. G. have the same forms, though in the two latter "half" precedes the ordinal. It does not go back to O. H. G. Selbander - cr(felbh) der weite, two of them: felbbreizehnt, himself the 13th, thirteen of them (G.): felbbritt, felbviert generally unintlected. Selbh wangigler (Le.). The cardinal is not common,

but Lessing has "felt fünftiger." This composition is more common than bate in the modern dialects.

2. Notice also the cardinals in -cr, as in den fünftiger Jahren-either "from 1850-60" or "from 50-60 years old." It is now classical. This -cr occurs in the names of the unit, ten, etc.: der Einer, der Zehner, etc. Sec 507. 1. Bu weit, dritt also occur for an aweien, dreien.

SYNTAX OF THE PRONOUNS.

Syntax of the Personal Pronoun.

- 230. 1. Du, sg., ibr, pl., are used in familiar intercourse in the family and among intimate friends, in addressing God, in sermons, in solemn discourses and in poetry. Ex.: Menuft tu tas Lant, we tie Citronen blübn? (G.). Blinter, after Bater! tu famust ten Lag ter Freibeit nicht mehr schauen; tu sellst ihn hören (Sch.). Erhab'ner Geist, du gabst mir, gabst mir alles, warum ich bat (F. 3218).
- 2. Sic, 3. p. pl., is used everywhere else, even among relatives in some families; also when grown children address the parents: 250 wobien Sic, wenn ich fragen var?
- 3. This peculiar use of Zie sprang up early in the 18th century. It is due, no doubt, to the use of the singular by and Zie in address, which were the height of politeness in the 17th century. By and Zie are due to the use of Serv and Zia in direct address. In Chamisso's "Tefer Zoftemble" the gray-coal always addresses Peter with "cor Serv." e.g., "Möge ter Serv meine Jutringlableit entisbuletyea... is babe eine Title and ha." Serv, Ziau, Jore Chacea, Gune Chaellen, Zeine Majetat were followed by the "plural of majesty" (see 311, 2): Serv Tefter wurten ha lateolifiert (F. 3524). Ziu serfie wellen Zeine Majetat, taß tie Itme'e chy! Muibub Bebone (some (8ch.). Serv was reduced to mere "er" as early as M. H. G., e.g., er Sigfibt; in the 16th contury, "Escrite er Fiarrer." This form encouraged the use of the pronounce in direct address.
- 4. Mr. in addressing one person, was early very respectful and has maintained itself in the drama, except in comedy, to this day, and might be called the "stage-address," and is due to Eng. and Fr. influence. See Schiller's Mana Zinart.
- 231. The gradation as to politeness and etiquette now is about as follows: 1. For princes and all persons of high standing, Aire Maccin Cure Creeken, Cure Maichat, with the verb in the pl. 2. Sic, addressing one or more persons, verb always in the pl., c. g., burfic id Sic fegleiten?

 3. Aft, pl. of bu, and Ar in the drama addressing one or more persons,

- e. g., Spåt femmt Ihr, bed Ihr femmt (Sch.). See F. 981, 988. 4. Er, Sie, addressing one person, now rare. 5. Du, ihr, as in 230, 1.
- 232. The genitive of the pronouns of the 1, and 2, persons stands very rarely after nouns. Goethe has it once, "main, has Grann firm, " of me the geognost," but it is common as the object of verbs, after adjectives and numerals: 3d bitt' and, nahm and mainer an (F. 1875). The uninflected possessive main hain are by some interpreted as predicate genitives, e. g., har Badar ift hair (Sch.). As it is much more probable that the possessive adjectives were used as genitives of the personal pronoun than vice reviva, this interpretation is hardly correct. (See 441, a.)
- 233. The personal pronouns always accompany the verb. In the imperative "Sie" always stands, but in and it only for emphasis: Yielet cure Scinte (B.). Bleiten Sie gefälligft. See F. 1908.
- 1. In poetry, colloquially, and in merchants' letters the pronoun is often omitted: Bin meter Frantein, weber fibin, fann mageleitet nach Sanje gefn (F. 2608). See F. 3429. In Bertes (viz., Schreiben) wem 18ten biefes (viz., Menats), babe empfangen. Notice the set phrases bitte, I pray; tanke thank you; getchweige (conjunction, "say nothing of"), before which ich has to be supplied. Ibut nichts, ber Jude mirb verbraumt (Le.), no matter, the Jew . . .
- 2. Colloquially the subject, if a noun, may be repeated in the shape of a pronoun, as in Eng.: Ser Mircher, er liest wie am Tage (G.). See 244, 3.
- 234. The pronouns of the third person have demonstrative and determinative force. (Compare the cognate Latin is, ca, id.) Hence if they refer to lifeless objects or abstract nouns, they rarely stand in the G. and D. cases, but they are supplanted by the regular demonstrative pronouns or, if governed by prepositions, by ta(r), bin, ber + the preposition. Ex.: Tem Richden kinen Gruß! 3d will taxen nichts beren (F. 2104). Sabt euch verber webl präpariert (F. 1958). Allein ich glaub', tu bältst nicht viel taxen (viz., ven ter Religion) (F. 3418).
- 1. Also es (A.) is thus supplanted, when referring to an individual object: We liegt Paris? . . . Den Finger brauf (not auf es) das nehmen wir (Arndt). Renn's Glück! Berg! Liebe! Gott! ich babe teinen Ramen dafür (F. 3455-6), Rennst du London? Besnach dasselbe iedensalls.

Concord of Pronoun and Noun.

235. The pronoun of the third person agrees with the noun which it represents in gender and number. The concord of the pronoun with the natural and grammatical gender has been treated, see 165, 166; also the neuter sg. 65 representing a plural and any gender, see 168.

On the use of "cs".

- 236. 1. Es is the indefinite subject of impersonal verbs denoting states of the weather and other natural phenomena, e. g., es regnet, connert, blist, idmeit, bagelt, es bat gegla'tteift, es tagt, es wintert, es cuntelt, cammert, taut, etc.
- 2. Es is made the indefinite subject of verbs, not really impersonal: Es schlägt els; es brenut, es tlepit, tlingelt, es gebt les, sautet; also in the passive and reflexive: es wirt getaugt, gesungen, gewicht; compare man taugt, man rust. Es gebt, spielt sich bier gut =: it is good walking, playing here. Webin sell es nun gebn (F. 2051).
- a. Such an ed is used by poets to give a vague, mysterious, ghostly impression. Schiller's "Tander," Goethe's "Seducities" and "Tetentan;" are full of them: Und als er im willigen Eddummer lag, bewegt es fid unter bem Bette (€.). The es (treated so far) except in the passive and reflexive verbforms cannot be omitted like, for instance, the expletive "es" sub 3, 5,
- 3. Es is made the grammatical subject of a verb, when the logical subject follows later: Es zogen trei Burjde mohl über ten Abein (Uh.). Es jæritt ibm jrijæ zur Seite ter blühente Genoß (Uh.). See F. 3490-1; 3674-77.

The logical subject cannot be another pronoun, e.g., es war id, es waren Sie, as in Eng. "it was I," "it was you," which is a late construction.

a. In ballads and other folk-lore this re is not required and inversion is still possible, as was the rule in O. H. G., without rant the head of the sentence. For after all, re was here used not merely to denote an indefinite subject, but to account for an inversion which had no apparent cause. It is an "cophetire" and superfluous as soon as any other part of the sentence stands at the head bringing about the inversion. It is oftenest translated by "there." German tales begin "(18) war chana"...", "There

was once . . . ". Sah ein Anab' ein Möstein stehn (G.). Stellt' ein Anabe sich mir an die Seite (id.). The construction ich bin es, In set es, "you are it," as in Ags. and as English-speaking children still say, is already the rule in O. II. G. Nor can we say in German, ich bin er" and "Sie sind er," but ich bin es, bas bin ich, ber bin ich, ich bin bersenge, welcher . . . , I am he who

4. Peculiar is the impersonal "co gicht," "there are" or "is," which is not a very old phrase, but rare in M. H. G., in which co with pl. verb was even possible.

"Es" is here the indefinite subject and has taken the place of the more definite "bas" or a noun, which "gave," "furnished," "produced" a certain thing. Hence "es gicht" is always followed by the accusative: "es gicht Schläge," "Somebody is giving or will give somebody a whipping." Ei, ba gab's weitfal'iden Schinten (Scheffel). "Es gicht" is not well followed by a noun in the sg. denoting one object or individual, e.g., Es gicht bier einen Sund, but by nouns in the pl., by abstract and material nouns: Es gicht feinen Bufall (Sch.). See F. 1118.

5. So is used as the subject of impersonal verbs followed by an objective personal pronoun (D. or A.), denoting states of mind and body: So türftet mid, es bungert ibn, es reut mid, es it ibm bange.

If the objective pronoun or any other part of speech precede the verb, is not necessary, but it may be retained. Ex.: 3d fdwere cut un mir ift's als wie cin Traum (F. 2040). Dir wird gewiß cinnal bei beiner Gettäbulich leit bange (F. 2050). Wir ift follecht un mute, "I do not feel well."

6. Es stands further as indefinite predicate and as indefinite object. See 204. In riejem €inne fannft ru's wagen (F. 1671). See further, F. 2012–14; 2080. €ie meint, du jeift entflobn; und balb bift du ce jeben (F. 3331-2).

In the last illustration and in similar ones es, if translated at all, may be rendered by "so": Sie find well mûde? O nein, aber id bin es geweien. — I was (so).

Syntax of the Reflexive Pronoun.

237. The reflexive pronoun always refers to the subject: Es ist ter Lobn ter Temut, tie sich selbst bezwungen (Sch.). Die bat sich jegliches erlaubt (id.).

- 1. The dative was already lost in O. H. G. In M. H. G. the use of fich as dative is very rare. Luther's Bible is still full of the dative of the personal pronoun for the reflexive, c. y. Die Deiben, da fie das Geseg nicht haben, fint (sie) ihnen sether ein Geseg. Die Beisbeit lässet ihr sagen, = wisdom will take advice. Gett schaft den Renden ihm zum Bitte. Lessing has: Ber sich knall und Fall ihm selber uieben nicht entschließen fann, der sebet anderer Estav' auf immer. But this "ihn" stands also because there is already one sich. It is very rare in the classics and does not occur in the spoken language.
- 2. Selbit, felter strengthens the reflexive pronoun and prevents its confounding with the reciprocal. For examples see above. But felbit (felter) is far from as common as the Eng. self (selves).

Syntax of the Reciprocal Pronoun.

238. As such are used mis, end, sid, both in the accusative and dative: Unt (sie) nicten sid (D.) zu unt grüßten sid (A.) reuntlid im Spiegel (H. and D., VII. 42). Wenn sid tie Zürsten besehren, müssen tie Diener sid morten unt töten (Sch.).

But if any ambiguity arises, as is frequently the case, the unvarying form chanter or the inflected ciner (ter cine) ten antern referring to mase, nouns, the cine the antern referring to fem, nouns, the cine the antern pl. of both, are used instead of them and even, though tautologically, in addition to them. Ex.: unb lieben und unter chanter (B.). Sie heeten ter eine tes antern.

Syntax of the Possessive Pronouns.

- 239. The possessive pronoun used adjectively agrees with the noun like any other adjective. See 212. The uninflected forms mein, rein, sein stand in the predicate and can be subjects only when used as nouns with or without the article, e. g.. Mein und Tein ist assessment lightnung (Prov.).
- 1. Standing in the predicate, therefore, it is right to say: Das Buch iff mein, meines, bas meine, bas meiniqe. As subjects referring to bas Buch: Meines, bas meine, bas meiniae ift verteren, mine is lost.
- 2. Care should be taken that the right possessive be used when persons are addressed with Sie, bu, ibr (Ihr). Ihr refers to Sie, bein to bu, euer (Euer) to ibr (Ihr), e.g., Sie baten Ihre Frau Mutter vertoren? Wohin

wird bid beine Bermeffenheit noch führen? Durch bes Mannes übermut, ben Ihr burch Euer Brautgemach zum Throne geführt (Sch.).

- 240. Of ter, die, das meine (ter, die, das meinige), when used substantively, der, die Meine, pl. die Meinen (with capital letters), denote persons, viz., friends, relatives, etc.; das Meine or das Meinige denote my property, duty, share, deserts.
- Ex.: Der herr fennet die Seinen (B.). Sie hat bas Ihrige erhalten (her dowry). Nardinal! Ich habe bas Meinige gethan. Thun Sie bas Ihre (Sch.). Diesen Morgen, als ich Sie im Nreise ber Ihrigen fand . . . (id.). "Ganz ber Ihrige," "bie Deinige," "bie Deine" are proper letter-endings.
- 241. The possessive pronoun must be repeated like the article with nouns of different gender: Sein hoher Wang, seine etle Westalt, seines Muntes Lächeln, seiner Augen Gewalt . . . (F. 3395-8).
- 242. 1. As sein and ibr are both reflexive (referring to the subject of the sentence) and non-reflexive (referring to another noun) an ambiguity may arise, which should be avoided by using the demonstrative pronouns instead; either bessen, beren always preceding, or besselhen, berselhen either preceding or following the noun. Ex.: Reland ritt hintem Bater ber mit bessen Schild und Schwerte (Uh.). "Mit seinem Schild" would have meant Roland's shield. Compare the following lines of the same poem, in which ihm prevents ambiguity: R. ritt hinterm Bater ber und trug ihm seinen starten Speer zusamt dem sehilde. Compare Frau R. N. ging mit der Haushälterin und ihrer Nichte nach dem Marste, i. e., Mrs. N. N.'s niece; but mit der Daushälterin und beren Richte, i. e., the housekeeper's niece. Es eiste seder seiner (the father's) undestedenen, von Berurteiten freien Liebe nach (Le.).
- 2. The possessive of the 3. person is in the people's language often repeated for emphasis after a genitive of possession and also after a dative: "Meinem Vetter sein Garten." Comp. "John his mark." This is not to be imitated though it occur now and then in the classics and quite frequently in the 18th century: Auf der Fertuna ihrem Schiff (Sch.); def Allo seinem Stubl (id.). Ihr artet mehr nach eured Vaterd Geist als nach der Mutter ihrem (id.). See 180, 4.
- 3. The definite article cannot precede the attributive possessive pronoun. Sener, bieser and such adjectives as obserbachter, erwähnter seemingly do, but such constructions as bieser bein Sohn, obserbachter mein Schreiber are rather appositional.

- 243. 1. By a license the possessives lose inflectional endings in such set phrases as occur in 3th möthe trum mein Tag nicht lieben (F. 2920). Mein Lebtag bent' ich bran (Sch.). Sab' ich bich boch mein Tage nicht geschen (F. 4440). These phrases are in the transition stage to adverbs and the apostrophe may stand or not.
- 2. Scin is in proverbs and in one phrase "sciner Zeit" = "in due time," "in—time," still used for the seminine ihr, a remnant of the earlier periods, when ihr could not be used as the reflexive possessive: Zein Ther seminifes Anh (Prov.). Untrene statist scinen eigenen Derin (Prov.). "Sciner Zeit" is an adverbial genitive, in which sciner has become non reflexive so that it apparently stands at times for ihrer, unseres, etc. Reflexive: "Miled Ding mährt seine Zeit" (Hymn); but non-reflexive: Zie war seiner zeit (once) eine greße Sängerin.

Compare the relation of Eng. "his" and "its." The latter sprang up in Shakspere's time. "Its" is the genitive of "it." In Sh. "his" stands frequently where later "its" is used.

3. The use of the German definite article where in Eng. the possessive is used, is by no means as strict and as common in the spoken language as the grammarians would have us believe. Take for instance: Mein armer Repf ift mir verrüdt. Mein armer Sinn ift mir terfüdt (F., I. 3383-6). Selang ich mich nech frisch auf meinen Peinen fühle, genügt mir vieser Ametenheck (F. 3888-9). See 154.

In the 17th century "figh" was used also for all persons. "Simplicissimus" is full of this misuse.

Syntax of the Demonstrative Pronoun.

244. Der, tie, tax, always accented, points out without reference to nearness in time or space. It is generally well translated by "that," also by "this," and by a personal pronoun.

Ex.: Dem Belfe bier (this) wird jeder Tag ein Keit (F. 2162). Aber, wie ich mich sebne did zu idauen, babe ich ver bem (that) Menschen (Mephistopheles) ein heimlich Grauen (F. 3480-1). S glücklich ber (he., den ihr belehrt! F. 1981). Der (for her) bab' ich die Freude verbittert (Bo.). Bebe bem, der Beltairen)d Schriften überhaupt nicht mit bem steptischen Geift lieft, in welchem er einen Teil berfelben geschrieben (Le.).

1. The genitives tee, teren, teren sg. fem., terer and teren, pl., are used substantively as follows:

- a. Des is archaic, but occurs in compounds like beshals, beswegen, bergeitalt, etc., e.g., Des frent sich bas entmensche Paar (Sch.). Wir find ber seines wert, bas wir bitten (Lu.), We are worthy of none of those (things), etc.
- b. Deffen, beren G. sg. fem. and G. pl., are used when they have the force of possessives (see 242).
- c. The present usage favors berer, G. pl., referring to persons and beren, beffen referring to things. But the classics do not agree with this. Generally these forms are antecedents of relative pronouns. Ex.: 3cp fag' mir das Ende berer, die von Treja febrien (G.). Sat das Kind fiden Jähne? Es bat deren vier. Dert ficht man die Güter derer (of the gentlemen, lords) von Bedeloh.
- 2. The lengthened forms in -ca and -cr sprang up as early as the 15th century both in the article and in the pronoun. Lather has ntenent D. ph., but the short genitives nter and nter." In the 18th century they lost -cr and -ca again, owing, no doubt, to the desire of distinguishing between article and demonstrative, and between the substantive and adjective uses of the latter. Gotthe has still must ven tenen Meniden tre fic beienters fighten." Present usage, however, requires the short forms of the pronoun, when used adjectively.
- 3. Notice the frequent emphatic force of the pronoun, e. g., Bem Redge, tas mit mis geberen ift, ven tem ift leizer nie tie Arage (F. 1978 9)

Diefer, jener.

- 245. Tieser points out what is near in time and space, jener what is remoter. Tieser is "the latter," jener, "the former." They are used substantively and adjectively: Tieses junge Francusiumer but Gesübl und Etimme (Le.). Tieser will's treden, was jener sendy begebrt. Tiese Blatt bier—rieses willst in geltent maden? (Sch.).
 - 1. Das, dies like es, but less frequently, can be the indefinite subjects of neuter verbs. See 236. E. g., Das ift die Magd des Nachbars. Das ift cin weifer Vater, der fein eigen Mind fennt (Sch.). Dies ift die Art mit Geren um zugehn (F. 2518). The verb may be in the pl. See 313.
 - 2. Dies und bas, bies und seues have the force of "irgend ein," c. y., Wir find nicht mehr beim ersten Mas, brum beuten wir gern an bies und bas (Song). Und er stredte als Mashe die Sande nicht aus nach diesem und ienem (H. and D. V. 64).
 - 3. Dieser is strengthened by bier; ber, iener and bas by ba, c. g., Mit bem ba werben Sie nicht sertig (Sch.). Jener, in the sense of "the other" and

"to come," "in jener Zeit", in jenem Leben. Shaffpere's Gespenft fommt wirflich ans jener Welt (Le.).

- 246. When not referring to persons hier + preposition may take the place of dieser, and da + preposition the place of der and jener, e. g., Wer soult ist shull daran als ihr in Wien? (Sch.). Davon sourcest des Sängers Höslichkeit (?). Hiernach (according to this) muß die Lesart eine ganz andere gewesen sein.
- 1. Notice the two strong forms in Lessing's Alles dieses, seine Ersindungen und die bisserischen Materialien, snetet er denn in einen sein langen, sein schwer zu sassenden Reman zusammen. For an das, was . . . , ven dem, was . . . no daran mas . . . , daven was . . . should be substituted, though this is done colloquially. "Wir dacten daran, was du jest ansangen wurden is not elegant.
- 247. Der-, die-, das jenige is generally used substantively followed by a relative clause or a genitive. Used adjectively it stands for ter, tie, tas when a relative clause follows, e. g., diejenigen Menjæn, welde . . . The best usage accents ter, die, das. Used adjectively it has only medium stress.

Ex.: Diejenigen ber Anaben, welche ihre Aufgaben nicht gemacht hatten, mußten nachfüren (stay after school). Liebet biejenigen, welche euch verfolgen (B.).

- 248. Der-, tie-, taffelbe denotes identity. It refers to something known or mentioned. It is used equally well substantively or adjectively. It can be strengthened by "eben": Mit aller Treue verwent' ide eure Gaben; ter Türftige foll sich berielben erfreuen (H. and D. II., 74-5).
- 1. Der nämliche also denotes identity, but is not written as one word. "Derfelbige" is rarer than berfelbe. War bas nicht ber Dienstmann (porter), ber bie Auswanderer betregen hat? Der nämliche.
 - 2. Selbig without ber is rare, e.g., Selbiges weiß ich gewiß (Heyse).
- 249. Self, jelfer, jelfft distinguishes one object from another. It strengthens personal and reflexive pronouns. It is made emphatic by then, also in the phrase tin(er) and terfelbe. Selber and fellft do not differ in meaning, but in use. Selber is

never made an adverb as selbst is. Selber always follows the word it qualifies, though it need not stand necessarily directly after it: Ich selber or selbst have ihn geschen. Wer zweiselt, Nathan, raß ihr nicht (see 309, 2) die Ehrlickseit, die Großmut selber seid? (Le.) Wer andern eine Grube gräbt, fällt selbst hincin (Prov.).

- 1. Scibit has become also an adverb with the force of "fogar," and then stands best at the beginning of the sentence, unaccented: Scibit cin fo himmlisches Paar (viz., Psyche and Amor) fand nach ber Berbindung sid ungleich (G.).
- 2. Notice the compounds bajethit, hie(r)sielbit, in that or this very place; also the force of "ven selbit" in: Die Mühle geht nicht ven selbit (of its own accord).

For felb with ordinals see 229. Alone it is very rare, c, g_* , well er in felbem (im Pala'ste) alle um sich versammelt hatte (Le.).

- 250. Sold means + "such." It describes what is pointed out. It is used adjectively and substantively: Hisroide Mäckte! einen solden (Weg) zeigt mir an, den ich vermag zu geben (Sch.). Wo war die Überlegung, als wir . . . solde Macht gelegt in solde Hand (id.).
- 1. The use of ield for the personal pronoun or ter-, bie-, taffelte is not good although found now and then in the classics, e.y., Als fie bie Move butte erreichten, fanden fie folde auf das luftigite (see 300, 2) ausgeichmürtt (G.).
- 2. For fold ein, so ein is a frequent equivalent. It is more common in the spoken language than seld ein. Lessing and Goethe are very fond of it, e.g., So ein Dichter ift Shafipere und Shafipere saft gam allein (I.e.). 3ch fann mich nicht, wie so ein Bortheld, so ein Tugenbschwäßer, an meinem Billen warmen und Gedansen (Sch.).

ASe ein" does not come from "feld ein." but from ein se besore adjective aud noun : "ein so hoher Turm" — "se ein hoher Turm," then "se ein Turm."

Syntax of the Interrogative Pronoun.

251. Wer, + "who," "which," and was, + "what," are used substantively only: Was fümmert es tie Löwin, ter man die Jungen raubt, in wessen Walte sie brüllt (Le.). Run, wen lieben zwei

von euch am meiften (id.). Was ift ber langen Rebe furger Sinn ? (Seh.).

- 1. Once the genitive after wer and was was common. Wer is almost entirely supplanted by welder, and was by was für ein. But was + genitive, which generally looks like an accusative, still remains in phrases like Was Lumber(s) (Le.). Was to Tenfels, Was Genfers. Was ift Weißes bert am grünen Walte (G.). See 181, 188.
- 2. When it refers to things or whole sentences we(r) + preposition is substituted. We've ter Yarm? (F. 1922). We ran erfamil to ten Dich. Wer before a vowel, we before a consonant.
- 3. In the spoken language "was" is preceded by a preposition that does not govern the accusative: 31 was, mit was; but wemit, were are preferable. The classics have it too. Even für was, um was, turd was are supplanted by wefür, werum, wedurd. 31 was die Peife? (G.) Wit was fann ich aufwarten?
- 4. Was in the sense of warum and wie is originally an absolute accusative, e. g., Was sieht ihr und legt bie Sande in (in den) Scholl (Scholl 28as wird das Gerg dir somer (F. 2720).
- 5. Mark the interrogative adverbs: we, + where; wann, + when; we, + how; we(r)- with preposition; warnn, + wherefore, + why, only interrogative. For their etymology see 551.
- 252. We to means + "which" and singles out the individual, though etymologically it inquires after the quality. It stands adjectively and substantively: Unt welder ift's, ten tu am meiften liebst? (Sch.). Welder Ungebeure sumet ibr mir an? (id.).

In exclamatory sentences weld is originally interrogative, often followed by cin: 28cld cm Jubela, weld cin Zingen wire in unferm Saufe fein! (Song). See F. 742.

253. Where für, was für ein inquires after the nature and qualities of a person or thing. Was für always stands adjectively, was für ein adjectively and substantively. Was is separable from für ein. Lessing is particularly fond of this separation. Was für stands before the singular of a noun

denoting material and before a collective noun; before the plural of any noun. Was für ein inquires also after an individual.

Ex.: Was für Wein ift bies? Was für Berge . . . trennen uns benn noch? Go.). Was in Babylon ich bir für einen foonen Stoff getauft (icl.).

Syntax of the Relative Pronouns.

- 254. There being no original relative pronouns, the other pronouns were used as such or conjunctions like so, dur, du, mate (see below) connected coordinate sentences, one of which later became subordinate. The first pronoun used as a relative was ter, tie, tas, in O. H. G. 28chber, wer, was developed into relative pronouns gradually. First they were made indefinite pronouns by means of the particle so, O. H. G. so hwelicheo), so hwereso), so hwas (so) > M. H. G. swelich, swer, swas who sover > N. H. G. welder, wer, was, which can be strengthened by nur, and, innact (even. To eav therefore that the interrogative is used as the relative is hardly correct, though, no doubt, the indirect question had its influence in the coincidence of the forms of the interrogative and indefinite relative pronouns. The demonstrative ter, tie, tas introduced the coordinate clause, which afterwards became subordinate; and clause and pronoun were then called relative. 28chber is only of the 16th century.
- 255. Der and welcher are equivalent. After personal pronouns ter is preferable. Euphony should decide which is to be used. Sin Francismmer, tas tentt, ift even se efel als ein Mann, ter sich schmint (Le.). Welcher is preferable after tersjenige. The following sentence is bad: Die, tie tie Mutter ter kinter war, ist gestorben.
- 1. Of the four relatives der, weld-, wer, was only weld- can also be used adjectively, the other three only substantively. The genitive of der, die, das is always dessen, deren, sg. and pl., never derer. Ex.: Wer sein Gesen adtet, ist even so maditia ato wer sein Gesen but (Le.) Am Montag, an weldem Tage wir abreisten . . . But this is not very elegant.
- 256. Ter and welder will take any antecedent soever. But wer, was, having sprung from indefinite and compounded pronouns, require none. Wer admits of no antecedent at all; was may have any other neuter pronoun, an adjective (preferably in the superlative), or a whole clause, c. g., The was brein acts and nicht brein (ins Webirn) gebt, ein prädtig Wert zu

tiensten steht (F. 1952-3). Alles was ist, ist vernünftig (Hegel). Was du ererbt von beinen Bätern hast, erwirk es um es zu besissen (F. 682-3). Dem herrlichsten, was auch ber Geist empfangen, brangt immer fremd und fremder Stoff sich an (F. 634-5).

- 1. Er, wer; ber Mann wer; ber, wer are impossible. But Goethe has (in the "Walpurgisnacht"), F. 3964: So Chre bem, wem Chre gebührt. The proverb says: "Ehre, bem Chre gebührt," the Bible "Ehre, bem bie Ehre gebührt."
- 2. Was referring to a substantive and welches referring to a whole clause are not present usage, though the classics use them so. Die Alten fannten das Ding nicht, was wir Höflickeit nennen (I.e.). Von früher Jugend an hatte mir und meiner Schwester der Bater selbst im Tanzen Unterricht gegeben, welches einen so ernstbasten Mann wunderlich genug dätte kleiden sollen (G.).
- 3. If wer has a seeming antecedent the latter stands after the clause. The antecedent is nothing but the subject of the main clause repeated for emphasis in the shape of another pronoun. If, however, wer and its seeming antecedent do not stand in the same case, the latter is indispensable. Ex.: Wer Ped angreift behivelt fid (Prov.). Wer über gewisse Dinge ben Versand nicht verliert, ber hat seinen an verlieren (Le.). Wer vieles bringt, wird manchem etwas bringen (F. 97). But Wer e in Mal lügt, dem glaubt man nicht meh wenn er auch die Vahrbeit spricht (Prov.). Ver da hat, dem wird gegeben (B.). The same is true of was: Was man nicht weiß, das eben brauchte man und was man weiß, sann man nicht brauchen (F. 1066-7). Früh übt sich, was ein Meister werden will (Sch.). For the gender in this illustration see 168.
- 4. The old short form wes is now archaic except in weshalb, weswegen: Bes Bret ich effe, bes Lieb ich finge (Prov.).
- 257. If the dative and accusative, governed by a preposition, do not refer to a person, we, now rarely ta, with that preposition, are generally substituted: Nichts ift Zufall; am wenigsten das, woven the Abjudt for flar in the Augen leader (Le.).
- 1. So, the oldest relative conjunction, has now been crowded out from the spoken language, though it was very common in the 16th and 17th centuries: Die linke Hand, bazu bas Haupt, so er ihm abgehauen (Uh.). Bon allen, so da famen (Bü.).
 - 258. The relative adverbs wv, "where" and ta (colloqui-

ally); ba, wann, wenn, wo, "when"; wic, "as" take the place of a relative pronoun governed by a preposition when they refer to nouns denoting time, place, and manner.

Ex.: Kennst bu bas l'and wo die Citronen blühn? (4.). Es gibt im Menschenleben Augenblick, wo er dem Weltgeist naher ist als sonst (Sch.). In diesem Augenblick, da wir reden, ist sein Tura'nn mehr in der Schweizer Lande (id.). "Die Art und Weise wie," "the manner in which." ("Wie" is more forcible than "in welcher.") O schöner Tag, wenn endlich der Soldat ind Leben heimschet (Sch.).

1. This construction is old only with the demonstrative adverbs used as relatives, viz., da, $da\hat{r}$, danne. Allow, allow, we felth are archaic.

Syntax of the Indefinite Pronouns.

- 259. Ein and einige can precede a numeral generally followed by a noun. They mean "some," "or so," "odd": ein act Tage, a week or so; einige vierzig Jahr, forty odd years. The order may also be: "ein Jahr fünfzehn."
- 1. Grimm thinks this phrase has lost "over," as if it meant einen Tag over zehn, ein Jahr over fünfzehn. No doubt "einige vierzig Jahr" has lost "und" and stands for einige und vierzig Jahr, forty (and) odd years.
- 260. Ein, etwas, was, wer, jemant, welche, einige can be strengthened by irgent (compounded of io + hwar and gin = "ever," "where," "you please," gin corresponding to L. -(un). For the origin of was, wer, welch, see 254. Ach, wenn ich etwas auf tich fönnte! "if I could influence you at all (F. 3423). Was anders suche zu beginnen (F. 1383). Die Jagt ist tech immer was und eine Art von Krieg (A.). Hier sind Kirschen zu verstausen. Wilst du welche? Hast du irgend was verloren?
- 1. They stand generally only in the nominative and accusative. Einig is rare in the singular, and for it irgent cin is better used.
- 261. All-. The following examples show the many various forms of all-: all bas Gelt, all bes Geltes, alles bas Gelt, was fell bas alles? Alle sangen. Alle Menschen mussen sterben.

- 1. Also stood in M. H. G. only after prepositions as still now, c. g., bet also bent, "withal." Are were also ben so bunn (F. 1946). The form also before the article and not preceded by a preposition, though very common in the classics and in the spoken language, is not so good as also rall with strong endings, e.g., All ber Somers (G.). All or also in such phrases as ber Wein iff all, "there is no more wine," has hardly been satisfactorily explained yet.
- 2. Notice the following meanings: Alle Stunden einen Theelöffel vell, "a teaspoon full every hour." The singular in the sense of "every" is rarer, auf allen Fall, in every case. Aller Anfang ift fewer (Prov.). Allee Ding währt feine Beit, (Bettes Vieb in Ewigleit (Hymn). The singular in the sense of Eng. "all" is archaic, allen Binter (Logan, quoted in Grimm's Dict.), all winter. For all day, all night, we say best die game Nacht, den gamen Tag. Notice also in aller Früh, "very early," in aller Stille, in alle Belt.
- 3. The plural of icter, itemeter, jeglider is rare. It is expressed by "alle," Even the singular of the last two is now archaic and rare.
- 262. Mander does not differ from the Eng. "many" in use and force. Compare ein mander, mand einer, mander gute Mann, mande ein guter Mann, mande idone Blume.
- 263. Biel and wenig, denoting the individual and used substantively denoting persons, must be inflected; if they denote an indefinite number, quantity, mass, they are generally uninflected. Tenn viele sint berusen, aber wenige sint ausers wählet (B.). Biel noch hast tu von mir zu bören (Sch.). Zwar weiß ich viel, toch möchte ich alles wissen (F. 601). Es studieren viel Ameristaner in Teutschlant.
- 1. Richer, -c, -cc denotes "various sorts," e.g., victor Vein; in composition victorici Vein, "many kinds of wine."

A fuller treatment of the large number of indefinite pronouns and numerals belongs rather to the Dictionary.

SYNTAX OF THE VERB.

CLASSIFICATION OF VERBS.

264. According to meaning and construction the verbs may be variously divided: 1, into independent verbs; 2, into the small class of *tense* auxiliaries and the *modal* auxiliaries. See **267.** Again: 1, into *personal* verbs, which can have any person, the 1., 2., or 3., as subject; 2, into *impersonal* verbs, which have the indefinite subject $c_{t,n}$ or regard. See **236.**

The personal verbs again divide: 1, into neuter or subjective verbs, as the Senne ident (see 179); 2, transitive or objective verbs, the direct object of which stands in the accusative (transitive proper, see 198) or in the genitive or dative (called also intrans., see 184, 190).

As subdivisions of transitive verbs may be regarded: 1, the reflexive verbs; 2, the causative.

The reflexives again: 1, into reflexives proper, which occur only as reflexives, e, g_* , fid gramen, to pine: fid erranen, to feel pity; 2, into both transitive and intransitive verbs used reflexively, e, g_* , fid wafden, fid vereinen, fid tet laden.

The pronoun is always in the accusative, but see 197.

1. Transitive verbs have often intransitive or neuter force, but there can be no direct object then. Das Pferd sicht den Bagen, but Die Welten sichen am Himmel. Personal verbs can also be used without a logical subject: Das Waffer randst, but Es randst im Nebre. Also the modal auxiliaries occur still as independent verbs: Was fell das? but Webin fell der Dieb geflüchtet sein? See 267.

Syntax of the Auxiliaries.

- I. Saben and fein.
- 265. Salen forms the compound tenses, active voice:
- 1. Of all transitive verbs: ich habe getragen, ich habe bereckt, ich habe angeklagt.

- 2. Of the modal auxiliaries, of reflexive and impersonal verbs proper. Er hat es nicht gemocht, hat sich gewaschen, es hat geregnet, es hat mich gereut.
- 3. Of intransitive verbs which have no direct object, at most the object in the G. or D. Er batte mein gespottet, er hat mir geschaft, er hatte gesacht, geweint, geschlasen.
- 4. Of (intransitive) verbs of motion when the mere action within a certain space, the effort, and its extent are to be emphasized, without reference to direction, point of departure or destination. At ven Humbelt hat viel gereift, was a great traveler. Ter Stallfnecht hat eine Stunde hin und ber geritten. Er hatte in Wien zehn Jahre gefahren (Le.). Das Lämmden hat gehüpft, der Fisch hat geschwommen. Das Kleine (the little one) hat nuch nie gegangen (has never walked). Sophie hat gesteltert und sich die Schürze zerrissen. Der Schnelläuser hat schon längst gesausen (sinished running long ago). Good usage favors: Die Ilhr hat einmal gegangen, aber setzt steht sie still. Die Mühle, die Maschine, das Rad hat gegangen, but ist is frequently used.
- 5. Of sipen, stehen, liegen, aufangen, beginnen, ausberen. But in S. G. sein is more common and it is also found in the classics. We habt ihr gesessen, gestanten? Wann hat tie Schule angesangen?

266. Ecin forms the compound tenses:

1. Of all verbs of motion, except some, which take haven, when action simply is denoted. See 265, 4. These take sein when the direction, points of departure, destination and arrival are mentioned. These circumstances are often expressed by inseparable and separable prefixes in compound verbs. Ex.: "Ter Mai ist gefommen." Er wird gesallen sein, = he probably fell. Wir sint somell hinabgestiegen. Die Seesahrer sind auf der Insel Stope gesandet. Die Störche sind nach Süden gezogen. Der Stallsnecht ist in einer Stunde hin und her geritten, = he rode to a certain place (there) and back. Die Teinde sind entslohen, entslausen, eingetrossen. Wir sind schon mehrere Male umgezogen (moved).

- 2. Of certain verbs denoting a springing into being or passing away, a transition and development, growth and decay, often expressed by er-, ver-, zer-, and separable prefixes. Die Mich ist gestoren (< gestieren, but es hat gestoren < street, there was a frost). Das Seil ist zerrissen. Der Schnee ist geschmolzen. Der Bruder wäre nicht gestorben." Das Bäumchen ist gewachsen. Die reichen Leute sind im Kriege verarmt. Das Licht ist erloschen. Die Schase ist gesprungen (cracked). Der Lehrling war eingeschlassen (had fallen asleep). In the compound verbs it is just this prefix that called for sein. Compare trinken— ertrinken, scheinen ersicheinen, wachen erwachen, hungern verbungern, stieren ersieren.
- 3. Of sein, bleiben, begegnen, folgen, gelingen, geschen, glüden, for which it is hard to account by meaning, but see 283, 2. Ex.: Es ist ihm nicht gelungen, geglüdt. Tas ist schon alles tagewesen. Ein süßer Trost ist ihm geblieben (Sch.).
- 4. Haben has gained upon sein in German, but not so much as English "to have" upon "to be." Felgen and begegnen were once generally compounded with baben. Also the tendency to use intransitive verbs as transitives, so strong in Eng., has increased in German. While in Eng. one can "run" a locomotive, a sewing machine, a train, a ship, in German sühren, leiten, in Gang bringen, gebrauchen, or the verb of motion + lassen or machen, will have to be used. Der Ruticer pat uns schullt gelabren. Der Resillien hat den Bagen vergesahren. Wan sennte die Fenersprüße nicht in Mang bringen.
- 5. The difficulty as to the use of basen and sein lies after all mainly in the way in which a verb is used, transitively or intransitively, and in the meaning. The student should attend particularly to these points and not be too timid, as in many cases usage is by no means settled.

As to the omission of baben and jein in dependent clauses, see 346.

II. SPECIAL USES OF THE MODAL AUXILIARIES.

This subject belongs really rather to the Dictionary, but the appreciation and translation of these verbs is so difficult that a brief treatment of them is given here.

- 267. 1. It önnen denotes ability: Der Fisch sann schminmen. Dier sich ich, ich sann nicht anders (Lu.). Possibility: Ibr sönnet ibr Werszeng sein, mich in das Garn zu ziehen (Sch.). Knowledge, "to know how." its oldest meaning: Kannst du Italie'nish? Compare sönnen, "to have learnt," then "to be able"; sennen (< kanjan, causative of sann—tönnen), "to be acquainted with"; missen, "to know."
 - 2. Dürfen denotes: 1. Permission and authorization: Du barift auch

ba nur frei erideinen (F. 336). Dine Sagbidein barf niemand auf bie Sagb gehn. 2. "To have occasion to," " reason for," " need ": Man barf ben Schluffel nur gwei Mal umbreben und ber Riegel fpringt gurud, " You noed . . . " Du barfit binandachen, die Luft ift bier sehr schlecht, "You have good reason to go out . . . " This force is the oldest, but rather rare now. 3. "To trust one's self to": Wer barf ihn nennen und wer befennen: 3ch gland ibn (Gett) (F. 3433-5). This force has sprung from 1 and 2 and from the verb tar --türren + dare, whose meaning was embodied in tarf - türfen. On the other hand, it has nearly given up the original force of "need," "want," still apparent in 2, to its compound feeirfen. In some editions of the Bible fürfen, "to want," and tar - türren, "to dare," are still the rule. In later editions before and turion have been substituted for them. 4. The preterit subjunctive (potential, see 284, 3) türfte is used for a mild assertion : Die Radwelt burfte Bebenten tragen, Diefes Urteil zu unterschreiben (Sch.). "Posterity very likely will . . . " Das burfte zu spät sein, "I fear very much, that is too late." Efficiette admits such redundant phrases as: Dürfte or barf ich mir erlauben, ete.

- 3. Mögen denotes: 1. In its oldest, but now rare sense except in dialect, "ability" and "power." This it has given up to "femen." Compare its cognates " may " and " can " in Eng .: Abr Anblid gibt ben Engeln Starfe, wenn feiner fie ergründen mag (F. 247-8), "although no one is able . . . " 2. Concession, no interference on the part of the speaker: Der Burfde mag nad Saufe gebu (It lies with him, I have no objection). Wer mir ben Beder fann wieder zeigen, er mag ibn behalten (Sch.). 3. Possibility, the action does not concern or influence the speaker; feman means a possibility that lies in the ability of another person or object. 29as für Grünred' megen bas sein (Sch.). Er mag bas acfaat baben, er mag bas thun, It is possible he said so, he may do it. Das Tier mag tehn Jahre alt fein. With this force it supplants the potential and concessive subjunctives; if it stands itself in the subjunctive of the present or preterit, it supplants also the optative subjunctive. 3ch munide tag bie gange Welt und beren mag, beren mege. Möchte auch bech bie game Welt und beren (Le.). 4. From 2 springs the force of "inclination," "liking," "wishing." Was fid vertragt mit meiner Pilidt, mag ich ihr gern gewähren (Sch.). 3ch möchte, bag er es nicht wieber erführe. 3ch effe was ich mag und leibe was ich mun (Prov.).
- 4. Müssen, + must, denotes: 1. In its oldest sense, "to have occasion, room," "to be one's lot," "it is the case." A trace of this is left in the following uses: Mein Sund war obne Maulterb hinausgelausen. Run mußte auch gerade ein Polizi'n daber tommen (as luck would have it, a pollce-

man came along). Der Zusall mußte ihn grade hin bringen. Imm weiten Mal soll mir kein Mang erschallen, er müßte denn (unless it should) besendern Sinn begründen (G., quoted in Sanders' Diet.). 2. Necessity of various kinds: Alle Menschen müßen sterben. Der Senne muß scheiden (Sch.). Ein Oberhaupt muß sein (id.). Das muß ein schlechter Müller sein, dem niemals siet das Wantern ein (Song). Er muß sehr frank gewesen sein; er ist noch so schwach. The force of dürsen: Ich muß nicht vergessen, "I must not forget."

Brauden : negative generally takes the place of muifen + negative when it denotes moral necessity. Tas braudit tu nicht zu thun, wenn tu nicht willft. Beld tem, ter mit ter neuen (Bell) nicht mehr braudit zu leben (Bell.).

- 5. Sellen, + shall, denotes: 1. Duty and obligation. On sellst Gette beinen Herrn lieben von ganzem Herzen, von ganzer Seele und von ganzem Gemüte (B.). On dättest da sein sellen, You ought to have been there. 2. Necessity and destiny: Diese Aurobi soll endigen! ihr Haupt sell fallen. Ich will Frieden baben (Sch.). Ich weiß nicht was sell es bedeuten (Heine). Was sell das? What (is that) for? Daria sellte er sich tänschen, In that he was bound to be deceived, disappointed. It denotes the statement and claim of another, "is to," "is said to": Das Meter sell acht Theler testen. Der Schah der Nibelingen sell im Noeine liegen. Sieden Straslinge sellen entsemmen sein. 4. Sellte approaches the sore of the conditional, + "should." Sellte er nech temmen, sag' ibm, ich dätte nicht länger warten lönnen. Sellte er auch webl frant sein? Is it possible that he is siek?
- 6. 28 etten, + will, denotes: 1. The will and purpose of the subject. Was wellten du mit dem Delde? hirid (Sch.). Id will es wider vergei ien, weil Sie dech nicht wellen, daß ich es winen sell (Cl.). Welle nar was du dannst und du wirst können was du willst. 2. "To be about," "on the point of." Ein armer Bauer wellte sterden (Nicolai). Es will regnen. Frequent in stage-directions, mvill geden," mvill abgeden." Will sid Gester ewig von mir wenden? (Sch.). 3. The claim and statement of another, who "says" or "claims to": Der Zenge will den Angestagten geschen baken. Du willst ibn at einem guten zweich betergen baken. Notice the ambiguity of such a sentence as Der Gerr will es getsan baken, "claims he did it," or according to 1, "wills or wishes that it be done."

28ellen is really the most difficult to understand and use. It occurs in a 24 at many more idioms with ever varying shades of meaning. Notice, e.g., 63 will certainen, "it is spread abroad," 28a3 will car shager? "What does that amount to?" what is nothing," Ad will es nicht geichen baken. I will act as if I had not seen it or "mabody shall see it," according to 1. 28cm ter 2 düler ted tiefe Regel leraen wellte, "if he only would ... - conditional. Wellte Gett tak..., would to God that ... Diefe Acter will nicht, this pen does not write (well). But it is impossible to give all these meanings.

Still Eng. "will" is not far behind the German. Sellen and wellen should not be confounded with Eng. "shall" and "will" of the future, see 279, 3.

7. Lassen, sometimes classed here, is really a causative auxiliary and never used as such without an inf., which stands as a further object. Keine Klage läßt sie schallen (Sch.). Unverzüglich ließ er brei Batterien außwersen (id.). See 202, 1. A second force is "to allow," "not to hinder." Der Gesangenwärter ließ ben Gesangenen entwischen. Lassen Sie bas bleiben (= to leave a thing undone. Lassen, to look, is a neuter verb.

For laffer + reflexive, see 272; in the imperative, see 287, 4.

REMARK.—Verbs of motion can be omitted, particularly when an adverb expresses the direction. Willft 'to mit? If muß bin. Tas Pade't fellte fort (ought to be sent). Ter hut muß in bie Schackel. But all except müßen and bürfen can be used as independent verbs, i.e., no other verb need be supplied. There is no call for a verb in Bas fell ber hut? (Sch.), "What is this hat (here) for? Notice that fellen, megen, and wellen are really the only ones that deserve the term modal auxiliaries, since they assist in expressing the mood. See 287.

THE PASSIVE VOICE.

- 268. The active voice needs no comment. Only transitive verbs form a complete passive. But transitives whose meaning admits only of an object of the thing, also intransitives and subjective verbs, form only the third person singular with the grammatical subject es or without it. Inner wird gebossen. Es wird gelacht und gesungen. Gestern wurde gespielt. Bei und zu hause (where I come from) wird viel Whist gespielt.
- 269. In the transformation of the active into the passive voice, the direct object in the accusative becomes subject-nominative and the former subject is expressed by von + dative denoting the agent and by turk + accusative denoting means and instrument. Baumgarten ericling ten Welfensichießen. 28. wurde von B. ericliagen. Der Brief wurde durch einen Dienstmann besorgt (through a porter). See prepositions, 304, 2.
- 270. When a verb governs two accusatives both accusatives become nominatives with the verbs of naming, calling, scolding. Er wurde sein Frank genannt. See 179, 2.

- 1. With schren and fragen the accusative of the thing may be retained, particularly if that accusative be a pronoun, e. g., Das Schsimmse, was any widersährt, das werden wir vom Tag geschrt (G.). For etwas geschrt werden it is better to use unterrichtet werden; for etwas gestragt werden, better nach etwas gestragt werden. The accusative of the noun now sounds pedantic, though schren in M. H. G. always retained the accusative in the passive. See 202, 2.
- 271. With a verb governing an accusative, a genitive, or a dative, the accusative becomes nominative in the passive, but the genitive and dative are retained. S. wurte tes hechverrate angestagt. Teiner wurte geracht (no grammatical subject) or es wurte teiner geracht. Mir wurte geracht, I was followed.
- 1. The verbs felgen, belfen, geberchen, ichmeideln, witerivrechen, tanten often form a personal passive in the classics and in the spoken language, but it is very questionable whether this use should be imitated; certainly not by foreigners who are accustomed to this construction in their own language and are apt to make mistakes in the active and say "id jelge tich" if they hear or say "ich weete gefelgt, geidmeidelt." Those who defend the personal passive appeal to the older accusative after beljen and fchneideln.
- 272. The reflexive encouraged by French influence, and man, of 4-active often replace the passive. For Es wird geinigen, gepecht stands Man fingt, pecht. Da öffnet sich das Iber, Then the gate is opened. Der Schüssel wird sich sinden, The key will be found. More frequent than the reflexive alone is sich lassen, e. g., Er wird sich bestimmen lassen at He will let himself be influenced to He can be induced to . . . Das sast sich sich besten, That is easily done. Das sast sich besten, That is plausible. See 290. 3, b. It is clear from this that the German passive is less frequent than the English. The grammars boast more of the full and long compound tenses than actual usage justifies.

273. Origin of the Passive Voice.

** In O. H. G. fein (sin, wesan), weren (werdan) were used to express the passive. Gothic alone shows traces of anything like a Latin passive, but even there the periphrastic form had to be resorted to. In M. H. G. the present is ich wirde gelobet; preterit, ich weart gelobet; perfect, ich bin gelobet; phyperfect, ich was gelobet. Worden was added to the perfect from the 13th century downward, but was not considered essential until the 17th century. The passive idea lies originally only in the past or passive participle and not in werben, which means only "I enter into the state of being ageliebt," "acfidiagen," etc. Compare the future, its werbe lieben, "I enter into the state of loving." The M. H. G. 4ch bin geliebet, ich was (war) geliebet are by no means lost. Only they are not called tenses now. Ad bin geliebt, bas Simmer iit gefest mean "I am

in the state of being loved," "the room is in a swept state," "has been cleaned," "Is clean." The participles are felt as adjectives. 35 \$\text{tin geliebt werken, ba8 } \text{3}\text{immer iff geligt werken mean 'I have passed into the state of being loved," "the room has passed into the state of being swept." The transition into this state, and not the present state, but the fact or action are emphasized, hence the idea of tense is prominent. The fitness of the name of perfect passive for this form and not also for ide bin geliebt is apparent because up bin geliebt wereen is composed of ide bin (geometren (the perfect)), geliebt. In O. H. G. fein still formed the present as "to be" now in Eng., but already in M. H. G. werden was the prevalent auxiliary (see above), while sein was prevalent in the perfect.

Perhaps the following examples will illustrate the force of the various forms:

Die Tochter ist verlobt, is engaged to be married. Bem Eise befreit sind Strom und Bäcke (F. 903). Dieser Ressel ist von Bergen begrent (Hu.) These three are not passive tenses. But compare: Bu bem Vackerlichen wird ein Centra'st von Bolltemmenbeiten und Unvelltommenbeiten erserbert (Le.) (present tense). Dieser Bunkt ist viel bestritten werden (pers. pass.). The same disserence between wurde + participle (= imperfect pass.) und war + participle (no tense). e.g., Home'r war vor Alters unstreitig sleisiger gelesen als iest (Le.). Die Säuser waren sestlich geschmicht (no tense). Der Nauberbauptmann war schen gesangen genommen worden, als seine Leute berbeisamen (pluperfect pass.). Der Spie'n wurde obne weiteres an einen Ast gesnücht und erbängt (imperfect pass.).

Examples of the future and conditional perfects passive are very rare in the classics.

Syntax of the Tenses.

SIMPLE TENSES.

274. The Present.

- 1. It denotes an action as now going on. We glangt the Sound, wie lacht the Flux (G.).
- 2. It is the tense used in the statement of a general truth or fact or custom, in which the idea of time is lost sight of. Dreimal trei ift neun. Gett ift tie Liebe (B.). Borgen macht Sorgen (Prov.).
- 3. The historical present is used in vivid narrative for a past tense. Tas zu Linz gegebene Beisviel findet allgemeine Nachsahmung; man verslucht das Andenken des Verräters; alle Arme'en sallen von ihm ab (Sch.).

4. For the English perfect German (also French) uses the present when the action or state continues in the present time, but there is generally an adverb denoting duration of time qualifying it. Ex.: Run bin ich sieben Tage bier (G.). 3mei Tage geben wir schen hier herum (id.). 3ch bin allhier erst furze 3cit (F. 1868).

This use is by no means new in German or unknown in English, e.g., "I forget why." "The world by what I learn is no stranger to your generos ity" (Goldsmith, quoted by Mätzner). It is closely related to the present sub 2 and 3, and generally translated by "have been" 4 present participle.

5. The future present, that is, the present with the force of the future, is much more frequent in German than in English. Ex.: Rein, nein, ich gebe nach ter Statt gurück (F. 820). Wer weiß, wer morgen über und besiehlt (Sch.).

It is a very old use of the present, from a time when the periphrastic future was not yet developed.

6. The English periphrastic present in "I am writing," "I do write" rarely has corresponding German phrases. For instance, that is dialectic and archaic. But the nicht mehr at 28 erten framen (F. 385). A large number of present participles are looked upon as adjectives and stand in the predicate after fein, but they do not form a tense (see 273, 1). There is a difference between the simple present and fein it pres, part. The former, if it occur at all, denotes an act of the subject, the latter denotes a quality of the same or of another subject. Ext. Man minut ted an emas, one takes part in something. Acmant in trimeburne, one is sympathetic. The Tarke febreit is hardly used, but hie Tarke in febreicate, the color is a loud one. Die Munficht reist cinen, immer höher at theight, the prospect entices one to climb higher and higher, but hie Munficht in reisent, the prospect is charming. Compare the Eng. "charming," "promising," etc.

275. The Preterit.

1. It is strictly the "historical" tense, used in narration, when one event is related in some connection with another event, as following it or preceding it. Ex.: Cajar fam, jac une flegte. Er wart geberen, er lebte, nabm ein Weib und flart (Gellert).

In the story of the creation in Genesis only the pret, is used until

chapter 2, verse 4, when the account is summed up Alio if Simmel und Erde geworden, which has the perfect as it should have. See 276.

2. It represents a past action as lasting, customary; also as contemporaneous with another action. Gestern sam ter Medicus hier aus ter Stadt hinaus zum Ammann (connect "hinaus" with "zum," not with "aus ter Stadt") und sand mich auf ter Erce unter Lottens Kintern, wie einige auf mir herumfrabbelten, andere mich neckten (G.). Kühn war tas Wert, weil es tie That nicht war (Sch.).

COMPOUND TENSES.

276. The Perfect.

It is used to denote a past event as a separate act or independent fact. The act is completed, but the result of it is felt in the present and may continue in the present. Ex.: 3d babe geneifen tas irrijde Olüd (Sch.). Obett bat the Welt erfdaffen = God is the creator of the world, but 3m Aniang iduf Obett Kimmel und Erre (B.). In hait's erreidt, Octavie (Sch.). See 279, 2.

1. In the best writers this distinction is generally observed, but not in the spoken language, in which the perfect is crowding out the preterit. As an illustration of the exact use of the tenses, particularly of the preterit and perfect, may be recommended the introduction to Schiller's Gefdidic bes Abfalls ber vereinigten Nieberlande.

277. The Pluperfect.

It denotes a past action which was completed before another past action began. Ex.: Tilly batte faum seinen Rüdmarsch angestreten, als ter König sein Lager zu Schwert ausbyb und gegen Franksurt an ter Over rückte (Sch.).

278. The Future.

- 1. It denotes an action vet to take place. Ex.: Bas wird aus dem Rintlein werden? (B.). Der Kaiser wird morgen abreisen.
- 2. It denotes probability and should then not be translated by an English future as a rule. Ex.: Der hund wird secht Jahre alt sein (= ist wohl or wahrscheinlich), the dog may be or is prob-

ably, six years old. Wer flopst? Es wird ein Bettler sein, it is probably a beggar.

3. In familiar language it stands for the imperative implying confident expectation of the result. In wirst vier bleifen, You shall stay here. In wirst vide butten, Take good care not to do it.

For the present with the force of the future, see 274, 5.

279. The Future Perfect.

- 1. It is the perfect transferred to the future. Bergebens werett ihr für euren Feltherrn euch geopfert haben (Sch.). More frequently than the future, the future perfect denotes probability: We wire er die Nacht jugebracht haben? (Le.), Where can be have spent the night? Es wire was antres wehl bereutet haben (Sch.), It probably meant something else.
- 2. As the present can have future force, so the perfect can have future perfect force. Richt over tent ich tieses Blatt zu brauchen, bis eine That gethan ist, die unwidersprechlich ten Hochwerrat bezeugt (Sch.).
- 3. In M. H. G., the future perfect is unknown and its force is expressed by ge prefixed to the present, and by the perfect.
- 1 a. Guard against confounding the modal auxiliaries in German with the Eng. future. Approach to a future might be felt in wellen and sellen, e. g., Was wellen sie denn berausverbören, wenn einer unschuldig ist? (G.). Der Reichstag zu Augsdurg soll bossentlich unsere Projekte zur Reise bringen (G.). Seo 283, 4.

280. The Conditionals.

They are future subjunctives corresponding to the preterit and pluperfect subjunctive as the future corresponds to the present. As in all subjunctives, the idea of tense is not emphasized. Preterit subjunctive and I. conditional, pluperfect subjunctive and II. conditional are nearly identical in force, but preterit and pluperfect deserve the preference, particularly in the passive. In dependent conditional clauses the preterit or pluperfect subjunctive only can stand. In the main sentence

there is no choice between them and the conditionals. Ex.: Ohne reinen Rat würze ich es nicht gethan haben or hätte ich es nicht gethan. Was würzest du an meiner Stelle thun? Wärest du hier gewesen, mein Bruder wäre nicht gestorben (B.).

281. The conditionals should be substituted for the subjunctive of the preterit and of the pluperfect: 1. When the force of the future is to be emphasized as in: Nähme der Kranke die Medigin regelmäßig ein, so würde das Fieder von dieser Stude an allmählich verschwinden. Sie glaubten, sie würden sich leicht als Helden darstellen (Sch.). 2. When the indicative and subjunctive forms coincide as is the case with certain persons in weak verbs: Naf einen Eid würde ich ihm nicht glauben. "Glaubte" might de pret. ind. Ihr würdet dies Nätsel mir erklären, sagte sie (Sch.). "Ihr werdet" could also be indicative future.

The Tense of Indirect Speech.

- 282. The rule is: The indirect speech retains the tense of the direct. Ex.: Die Bäume seien gebannt, sagt er, und wer sie schätige, tem machse seine Sant beraus zum Grabe (Sch.). Egment beteuerte, taß tas Ganze nichts als ein Taselscherz gewesen sei. Der Knabe behauptete, er batte es nicht gethan, wenn er nicht von seinen Gefährten tazu verleitet worten wäre. Er sagte auch, er wolle es nicht wieder thun, wenn man ibm jest vergebe. Der Zenge konnte nicht schwören, taß er ten Angeslagten je gesehen babe.
- 1. But this rule is not strictly observed. If the main clause contains, for instance, a past tense, the other clause may take a preterit for the present, a pluperfect for the perfect, or a conditional for the future: Tas warm vic Marcha, fagte mir ver different, fie regierten vas Orchid (Sch.). Is weither vice Marcha, fagte mir ver different vice Marcha, fagte mir ver different vice Marcha (id.). If any ambiguity arises, as is not unfrequently the case, this license should not be included in. If the main verb is in the present, it is not well to substitute the preterit or pluperfect in the subordinate clause, because this license is due to attraction of tenses, viz., preterit in one—preterit or pluperfect in the other. Compare: Er betweet, or fei vagegen, he asserts, that he is opposed. Er betweet, or ware bagegen might be construed as meaning or würze bagegen fein, which means "he would be opposed." Er betweet, or fei vagegen gewesen, he had been

opposed; or ware bagegen generical might moreover be understood as having the force of the II, Conditional.

For the mood of the indirect statement, see 285. For further remarks on the use of tenses, see 284, also the General Syntax.

283. ORIGIN OF THE COMPOUND TENSES

- 1. The compound tenses in all the living languages are products of the development of so-called periphrastic conjugation, which uses certain independent verbs denoting existence, possession, transition, or the beginning of an action, in connection with an infinitive, participle, or germulive. The more the inflectional endings of the simple tenses of the earlier periods weathered, the more favorable were the chances for the growth of analytical and circumfocutory tenses. Compare the Latin amor, amatus sum or fui; excusari, excusatam, -um habeo or teneo with French je suis atmé, -ée, je fus aimé, -ée; je l'ai excusé, -ée, je l'arais excusé, -ée. The Germanic languages have only two simple tenses. Gothic shows still a mutilated passive—But the future perfect and pinperfect active and passive sprang up within historic times from a combination of an independent verb with an infinitive or participle, which were at first felt only as predicate noun or adjective. The participle in O. H. G. could be inflected like any predicate adjective.
- 2. At different periods of High German there were different verbs which could be thus employed. Besides the modern auxiliaries haben, fein and werten, in O. H. G. eigan, 440 own. In Gothic haban i inf. was made to express the future in O. H. G. suln (shall) and wordan press, part.; in M. H. G. besides these, wellow, milezon. Ash have ben but abgenommen or anigeicht neans originally I have, possess the hat in some state or position, viz., in my hand (taken off) or on my head (put on). The German order, too, shows this early construction much better than the English "I have taken off my hat." Compare the Latin Excusalum habeas me rogo, "Have me excused, pray," ,, Vitte, habe (balte) mid (für) entidultigt." Saben could only be used with transitive verbs, but losing the distinctive meaning of possession, it could combine with verbs having an object in the G. and D. and even with no object, viz., with intransitive verbs. Saben required the past participle in O. H. G. in the A., but fein required it in the N. - Erin could not, from the nature of its meaning, form the perf, or pluperf. active of any transitive verb, but only of intransitives denoting a continuance of a state (bleiben, fein) or transition into another state, where it, however, collided with wetten, used in the future. But notice that the idea of transition and change is in most verbs, here in question, due to the prefix. Zein : past participle could only mean existence in a certain state, at most the beginning or ceasing of an existence.
 - 3. As to verbs of motion, their relation to these verbs is very intimate. When it is not, baken becomes the rival of join, as soon as the activity of motion is to be brought out and not the result. That join could be used with a past participle of a verb of motion at all, was partly brought about by its use with a present participle and maintive Such forms as vernment, vermégach, nadsgebend join, vernuten join are remnants of the use of sin_{\perp} press, part, or inf. in M. H. Q. We do not feel the participle or infinitive as such now. They form no tense.
 - 4. Werten + pres. part. was in M. H. G. more common than werten inf., but the

latter was the established future in the 16th century. From "I pass into the state of praising" to "I shall praise" is not a long step.

5. The conditionals formed with wurde sprang up in the 14th century and were settled in the 16th, according to Grimm. In M. H. G. before the 13th century "solde," "worde" were used as in the other Germanic languages, but these lacked the umlaut, and therefore were not easily distinguishable as subjunctives.

THE MOODS.

Subjunctive.

- 284. The indicative is the mood of reality, the subjunctive is the mood of unreality, contingency, possibility.
- 1. The imperative subjunctive helps to fill out the imperative for the third persons sg. and pl. and the first person pl. It is a strong optative, see sub 2.

Ex.: Alles schweige, jeder neige ernsten Tönen nun sein Ohr (Song). Sehe jeder wie er's treibe, sehe jeder wo er bleibe (Cl.). Seien Sie mir willso'mmen. Laffen wir das, let us not do this. Weben wir diesen Paragraph(en) noch mal durch, let us go over this paragraph once more. Weben Sie. Treten die herren gefälligst ein (rare).

Werte and fei, feit really subjunctives, are used as imperatives in the second person. Werte munier, mein demute (Hymn). Sei mir gegrüßt, mein Berg (Sch.).

2. The optative subjunctive expresses a wish or request. The present subjunctive implies confidence of fulfilment. Only the third person is used.

Ex.: Did führe burch bas wildbewegte Leben ein gnabiges Geschidt (Sch.). Dein Rame sei vergessen (Uh.). Gott vermehre bie Gabe (Cl.).

The preterit subjunctive implies less assurance, and, like the pluperfect subjunctive, even no expectation of realization.

Ex.: O wären wir weiter! o war ich zu Saus (G.). O fahft bu, voller Monbenschein . . . (F. 386). Wäre er nur noch am Leben! (Implying "er ift aber tot"). Frommer Stab, o hätt' ich nimmer mit bem Schwerte bich vertauscht (Sch.). Ses also F. 392-7.

3. The potential subjunctive expresses an opinion as such, a possibility, a mild assertion of an undoubted fact (diplomatic subj.); it stands in questions, direct and indirect; in exclama-

tions. The preterit and I. conditional are the potential subjunctives of the present; the pluperfect and II. conditional, of the past.

Ex.: Ich reime, bächt' ich, boch noch so ziemlich zusammen, was zusammen gehört (I.e.). Das ginge noch, "that might do yet" (id.). Wer wühte das nicht? Everybody knows that. Dätte ich boch nimmermehr gedacht, daß er so groß werben würbe (Le.). Wie ließe sich alles schreiben! (G.) (Implying "es ist unmöglich"). Fast hätte ich das Beste vergessen (id.). Beinahe wäre ich gegen einen Baum gerannt. Du hättest das gewußt? (Implying "ich glaube es nicht). Nicht, daß ich wüßte, not as kar as I know.

See also the modal auxiliaries, 267.

4. The concessive subjunctive denotes an admission, yielding, and supposition. Generally only in the third person of the present and perfect. It borders closely upon the optative and conditional.

Ex.: Es foste mas es wolle (Le.). Es sci, "(it is) granted." Gesclle, bu seift ein guter ober schlimmer, leg' bich aufs Ohr (Uh.). See mögen, 287, 3.

5. The unreal subjunctive stands in conditional sentences both in the premise and the conclusion, i. e. in the dependent clause and in the main clause, when the premise is not true. The preterit and pluperfect stand in the premise; the preterit, pluperfect, and the two conditionals in the conclusion. The preterit has present and future force, the pluperfect has future force only.

Ex.: Es ließe fich alles trefflich schlichten, fonnte man bie Sachen zweimal verrichten (G.). Ich mare nichts, wenn ich bliebe was ich bin (id.). Wenn wir Gelb bei uns gehabt hatten, fo wurden wir ben Armen was gegeben haben.

* The premise omitted or represented by an adverb, etc.: Ich that bas nicht an Deiner Stelle = wenn ich an Deiner Stelle wäre. Wir wären bes Todes. Ohne Alvenstof wäre ber Banderer in die Tiese binabacsallen.

The conclusion omitted: Ja wenn wir nicht wären, sagte bie Laterne zum Mond. Da ging ste aus (Folk-lore).

285. The subjunctive is the mood of the indirect statement, in which the speaker expresses the ideas of another in

his own words without sharing the responsibility for, and belief in, the statement. For examples see 282.

The third sentence shows that unreal conditional clauses are not affected when part of an indirect statement. The fourth, also the last of 328, show how other clauses are affected.

Imperative.

- 286. It expresses a command and occurs only in the 2. p. sg. and pl. For the 1. and 3. p. pl., see 284, 1. Gife mit Weile, Make haste slowly. Yebre tu mid meine Yente fennen (Sch.). Bintet ibn (id.). Wartet ibr, inten wir voran laufen.
- The pronoun is quite optional; only when there is a contrast, as in the last sentence (ibr — wir), it should stand. In the subjunctive it always stands.

The imperative is only used in the present and has future force, but by a license also a perfect imperative occurs; Refm! Refm

- **287.** Other verbal forms that take imperative force and a very strong one, are:
- 1. The infinitive : Maul (Munt) balten! Hold your tongue. Richt anfassen! Do not touch.
- 2. The past participle: Die Trommel gerührt (G.). Arifch auf Mameraten, auf's Pfert, auf's Pfert! in tas Felt, in tie Freiheit gezogen (Sch.).
- 3. The present and future indicative: Weorg, tu bleibst um mich (G). Du wirst ten Apsel schießen von tem Rops ter Anaben (Sch.). See 278, 3.
- 4. The modal auxiliaries denoting a necessity, duty, can express imperative force, also tajen. In julit micht steblen (B.). Rein Menjeh muß mujien (Le.), no man ought to be compelled.

Since the Eng. "let" shows no inflection, notice the German forms: Las uns gehen, to a person seldressed as bu; plural Lass uns gehen. Lassen Sie uns gehen, to a person addressed as Sie.

Infinitive.

- 288. It is a verbal noun and the present infinitive has neither voice, tense, nor inflection. The compound infinitive arose like the compound tenses (see 283): griots werren, to be praised; griots werren fein, to have been praised; griots haven, to have praised.
- 1. Notice the marked difference in meaning between the present of some of the modal auxiliaries + perfect infinitive, and the perfect or pluperfect + present infinitive. Ex.: Der Author will ben Orfangenen gefehen baben = claims to have seen him, but hat the fehen wellen = wanted to see him. Der Sauffer muß verbeigegangen fein = must have passed by, but hat verbeigehen müßen, was forced to pass by, etc.
- 289. We distinguish between the infinitive without 311 and with 311.

The former is the older construction. Being a noun, the infinitive always stood in the D. after 30 in O. and M. H. G. But in early N. H. G., when it was no longer infected, the prepositional infinitive gained ground and gave also rise to the gerundive (see 208). Usage is in many cases still unsettled as to the use of 30. Its frequent use is the source of much bad style (see Sanders' "Saurtiфwickigletten"... sub Inf.). The cases where the infinitive has taken the place of the present participle are mentioned below under each head. In the gerundive alone the participial form has taken the place of the infinitive. See 208.

THE INFINITIVE WITHOUT 311.

- 290. 1. It is dependent upon the modal auxiliaries. Ter Bote will es aus aller Leute Munt erfabren baben. Man foll ten Lag nicht vor tem Abent loben (Prov.). Also upon thun in quaint and dialect style, e. g., Ta thäten sie sich trennen (Uh.). See the speeches of Marthe and Margarete in F., I. Upon baben in the phrase gut haben. Du hast gut reten, it is easy enough for you to talk. Er thut nichts als . . . , he does nothing but . . .
 - 2. In certain phrases dependent upon some verbs of motion; also upon helsen, heisen (command), lassen, lebren, lernen, maden, nennen. The verbs of motion are: spazieren reiten, sahren, geben; schlasen gehen, sich schlasen legen, etc. heiß' mich nicht reden,

heiß' mich schweigen; benn mein Geheimnis ist mir Pflicht (G.). Lehre mich thun nach beinem Wohlgefallen (B.). See Schiller's Tell, 1549.

- 3. Dependent upon certain verbs of rest: bleiben (most frequently), liegen, stehen (rarely); and upon verbs of perceiving: sinden, fühlen (rarely), hören, schen; also haben. Steden bleiben, to stick fast (intr.). Schlasen liegen. Wir sanden den Leichnam im Balve liegen. Wir sahen den Führer über dem Abgrunde schweben. Der Tyroler hat gewöhnlich Federn am Hute steden, der Engländer Bänder herunterhangen. Ich hab' es östers rühmen hören, ein Komösbia'nt könnt' einen Pfarrer lebren (F. 526-7).
- a. Sein is still so used in dialect. Grift fiften, jagen, he has gone afishing, ahunting; er ift fiften gewesen, he has been afishing. With all the verbs sub 3 and several sub 2 the present participle was once the rule in older German. Compare the participle in the predicate, 294, 2.
- b. After fühlen, heren, lassen the infinitive has either passive or active force, and often an ambiguity arises which should be avoided by a different construction. We have heard it said. Die Degge läht sich nicht unden, The bulldog will not be teased. Vir heren ten knaben rusen, calling and called (generally the first). Der Lehnlussen sieh und nicht sahren, the hackman did not let us go, die not allow us to drive, did not have us driven. Der Meister ließ die Lechter uicht malen, did not allow her to paint and did not have her portrait painted.
- 4. As subject or predicate with sein and heißen, to be, to amount to: Noch ei'nmal ein Wunder hoffen hieße Gott versuchen (Sch.). Ein Bergnügen erwarten ist auch ein Bergnügen (Le.).

THE INFINITIVE WITH 3U.

291. 1. It expresses the purpose of an action and in general the indirect object; also necessity and possibility after neuter verbs, e. g., sein, bleiben, stehen, when it has passive force. Die Sache ist nicht zu ändern. Es bleibt noch viel zu thun. Das steht noch zu überlegen. Da treibt's ihn, den köstlichen Preis zu erwerben (Sch.).

This is the old and proper use of the infinitive, originally a noun in the D. governed by zu. In N. H. G. um was added to express purpose, but it was really superfluous, though common in the spoken language. Im bie Strömung abzuleiten gruben sie ein frisches Bette (Platen). Wir seben nicht

um zu essen, sondern wir essen um zu leben. The force of zu was much weakened when um could thus be added. Besides um, anstatt and ohne can precede zu: anstatt weg zu lausen, sam der Bär näher heran. Ohne sich umzusehen, sief der Dieb davon. But "um" should never de used except to express purpose. It is used too frequently. See sub 4.

2. It stands as direct object of verbs, often preceded by, or in apposition to, a pronoun or pronominal adverb + preposition. Ex.: Fang an zu haden und zu graben (F. 2355). Niemand fäume zu geben. 3ch denke nicht daran, dir das zu gewähren.

In older periods of the language there was no au in this case.

- 3. It stands as subject, in the spoken language, more frequently than without ju; there is no choice. Orfährlich ist's ten Yeu ju weden (Sch.). Eine schöne Menschensele sinten ist Oewinn (He.).
- 4. As adjunct of nouns and adjectives, the latter often being qualified by zu and genug. "Die Kunft sich beliebt zu machen." Zu stolz, Dank einzuernten, wo ich ibn nicht säete (Le.). Du wärest blind genug, bas nicht einzusehn? . . . Bereit, dir zur Gesculschaft hier zu bleiben (F. 1431).

After adjectives "um 3u" is now far more common than 3u alone. 3d bin 3u alt, um nur 3u spiclen, 3u jung, um ohne Bunsch 3u scin (F. 1546-7). Quite rare is als 3u + infinitive.

5. For the independent use of infinitive, see imperative, 287, 1. With or without 34 in elliptical expressions: 2Bas thun, fright Beas (Sch.). Was, am Rand bes Grabs 34 lügen! (F. 2961).

ACCUSATIVE WITH THE INFINITIVE.

- 292. In this construction the logical subject of the infinitive stands in the accusative. The infinitive stands with or without zu. Ex.: Her ruhet Martin Faulermann, wenn man ten ruhen sagen tann, der seinen Lebtag nichts gethan (Weckherlin, quoted by Blatz). Lügen, die man Lügen zu sein weiß (Le.).
- 1. Accusative with infinitive was not rare in O. H. G. in the translations from Latin and Greek. It is largely due to foreign influence. In M. H. G. it is very rare. In

modern German it is discouraged by the best authorities, though Lessing uses it quite frequently.

2. The corresponding English constructions must therefore be rendered freely into German. I believe him to be my friend, 3rd glaube taker mein Freunt ift or 3rd halte the für meinen Freunt. German loses thus a compact construction.

THE INFINITIVE AS A NOUN.

293. Some infinitives are felt as nouns only, e. g., das Leben, das Anschen, das Leben. The infinitive used as noun generally has the article. Das Rauchen ist hier verboten. Beim Überse'hen muß man dis an's Unüberse'gliche herangebn (G.). Der Erben Beinen ist ein heimlich Lachen (Prov.).

Participles.

294. The participles are really adjectives derived from verbal stems. The present participle retains more of the verbal construction and force than the past, in which the idea of tense only appears in intransitive verbs.

The present participle has active force in all verbs and the noun is the subject of the action. Ter facefine See, the angle genere Sounc, tas inhagence Setter, "fire-damp." Both participles can be used as nouns, adjectives, and adverbs very much as in English. They stand in apposition, in the predicate and as attributes.

- 1. Participles in which the noun is not the subject of the action, and those in which lies passive rather than active force, are still current, but not so frequent as in early N. H. G. They are not generally countenanced, e. g., bei schlasenter Nacht, "at night time," "when everybody sleeps"; eine schender, a sedentary habit of life; essente Baaren, eatables (better Eswaaren); eine vorbabende Reise, an intended journey. Some of these can be defended: sabrende Babe, movables, chattels (intrans. verb); erstaumende Nachricht, astonishing news (trans. verb); eine messente Sub (intrans. like "missen"); die reitende Post, postman on horseback. Poetic are der schwindelde Reis, the giddy rock. Son des Sauses weitschauendem Giebel (Sch.).
- 2. In the predicate appear now only such present participles as have become regular adjectives: becauted, important; reignd, charming; biarciped, ravishing; bibeat, in pain, ill health; bringend, urgent. See 274. 6.

- 3. In apposition: Rodend, wie aus Dfens Raden, gluhn bie Lufte (Sel.). Ich empfange fnicend bies Weichenf (id.).
- 4. The participial clause with the present participle is only in very restricted use in German compared with English. It cannot express an action preceding or following another action, a cause, purpose, etc. It has usually the value of an adjective clause and can often be explained as in apposition. Der Arme, fich an mich wentent, fprach: Saben Sie Mitteit, mein Gert.
- 295. The past participle of a transitive verb has passive force; that of a verb which forms its compound tenses with fein has active force: ter laubumfranzte Beder (Sch.); tas berges fübrte Belt id.); tie abgesegelten Ediffe; ter turdgesaltene (unsuccessful) Cantita't.
- 1. But not all verbs that have fein in compound tenses can be thus used; the participle must denote the state produced by the action of the verb. Die gefegelten Schiffe, der gelaufene Anady would not do. Der entlaufene Stlave means "the runaway slave." This force is clear from the origin of the compound tense with fein (see 273, 283).
- 2. Seemingly a large number of past participles have active force, but they are either quite wrong or they can be explained as having had originally passive force. Thus: "Ungefecte if man nidt" (Gerok); "ungegeffen in Bette gehn" are as wrong as their English equivalents: One does not eat unprayed, go to bed uneaten. "Bedient" means "in service," "invested with an office," hence a "servant," Bedienter. "Berdient," one who has merits, well er fid um chast or jemand verbient genadt hat; eingebiltet means conceited, taken up with one's self; ein verlegener Mende, a man given to lying; verfesser Mende, given to drinking, and many other compounds with ver : verweinte Mugen, eyes red with weeping.
- a. That some are now felt as having active force cannot be denied, else the wrong use mentioned could not have sprung up; getts, pflichtergeffen, forgetful of one's duty, for God; verfchafen, "one who slept too long"; vermeffen, "presumptuous"; verlegen, embarrassed; besides the above.
 - 296. The peculiar past participles of verbs of motion, which seemingly have active force, stand in a sort of apposition or as predicates with formen, rarely with geven. Ex.: Ram ein Bogel gestogen (Song). Da fommt tes Wegs geritten ein schmuder Exelfneckt (Uh.).

- 1. This use is by no means modern. Rommen and gehn are felt as auxiliaries. Compare vertoren gehen.
- 2. Special notice deserves the past participle with heißen, sein, and nennen, which has the force of an infinitive, but belongs under this head. Das heißt schlecht geworsen, That is a bad throw. Unter chrlichen Leuten nennt man bas "gelegen." Frisch gewogt ist halb gewonnen (Prov.).
- 297. The participle appears in an absolute construction. The logical subject is left indefinite (Lessing is very fond of this). The logical subject stands in the accusative and with a few, like ausgenommen, eingeschlossen, abgrechnet, even in the nominative. Alle waren zugegen, der Pfarrer ausgenommen. Und dieses nun auf Laokoon angewendet, so ist die Sache klar (Le.).
- 1. Closely related to this construction is the absolute accusative + a past participle (see 209) and in some cases there may be doubt as to which is meant. Und fic fingt himans in dir finster Nacht, das Auge von Beinen getrübet (Sch.).

The past participle is in elliptical construction in the imperative, see 287. 2.

THE GERHADIVE

298. It stands only attributively. In the predicate the old infinitive stands, which it has supplemed. Ter ned zu vertausente Schrant, the wardrobe which is still to be sold; but ter Schrant ist ned zu vertausen, the wardrobe is still to be sold. See 289, 452. It has always passive force.

Though the form is rather that of the gerund than of the gerundive, in construction it closely resembles the Latin gerundive. Hence the name in German.

SYNTAX OF THE ADVERB.

- 299. The adverb qualifies a verb, an adjective or another adverb. Ex.: Tu hast mich mächtig angezogen (F. 483). Die unbegreislich hohen Werke sind herrlich wie am ersten Tag (F. 249-50). Das ist sehr schön geschrieben.
- 1. The adverbs of time and place often accompany a noun with the force of an attribute: Vor Jenem broben sieht gebückt, ber helsen lehrt und hilse schick (F. 1009-10). Georg V. (ber Fünste), einst König von Hannover, starb im Auslande.

- 2. The adverb stands as a predicate: Die soven Action von Aranjuez sind nun vorüber (Sch.). Die Thür ist zu (one can supply "gemacht"). Der or dem Minister ist nicht wohl.
- a. Do not confound gut and well. Except in a few cases, as in well thun, to do good, well does not qualify a transitive verb. We do not say in German well foreiten, well antwerten, well animagen in the sense of English "well." (It hat es well geichteten means "he wrote it, indeed, (I assure you)"; or it is concessive and can mean: "to be sure he wrote it, but then —." In the last sense well has no stress.
- 3. With adjectives or participles used as nouns that are felt rather as substantives than as adjectives or as derived from a verb, the adverb changes to an adjective: ein nah Bermandter > ein naher Bermandter; ein intim Befannter > ein intimer Befannter. But compare Goethe's famous line: Das Emig-Beibliche giebt und hinan.
- 300. An adverb may strengthen the force of a preposition by standing before or after the preposition + case. This is always the case when the adverb is the prefix of a separable compound verb: rings um tie Statt (herum), mitten turn ten Walt, in tas Dorf hincin, aus tem Garten heraus. Es ritten trei Reiter zum Thore binaus (Uh.).
- 1. Mark the adverbs which are only adverbs and not adjectives: webt, jait, faon, jobr, neutide, freitide, frub (rare), feat (rare), bate, and others.
- 2. The uninflected comparative and superlative of adjectives serve also as adverbs. Notice the difference between any + A, and an + D. Sic fangen any bas begit (Uh.), they sang as best they knew how. This is absolute superlative. Sic fangen am beften, they sang best of all, any. This is relative superlative.

SYNTAX OF THE PREPOSITION.

- , **301**. The prepositions express the relations of a noun to a verb or to another noun.
- 1. Prepositions are originally adverbs, and the distinction between prepositions, adverbs and conjunctions is only syntactical. Dean is, for instance, a conjunction for, and an adverb = then, than; waferen is a conjunction while, and a preposition during. Prepositions could not originally "govern" cases. A certain case was called for independently of the preposition, then still an adverb. In Greek there are prepositions governing three cases, which shows how loose the connection between case and preposition was. In fact nearly all adverbs, old and new, can be traced back

to cases of nouns or pronouns. They are isolated or "petrified" cases, and as such could only stand in the loosest connection with the living cases, which they gradually began to "govern."

2. Prepositions can govern different cases in different periods of the language. The preposition has been partly the cause of the loss of case-endings. Its function becomes the more important the more uninflectional (analytical) a language becomes. It is one of the most difficult and subtle elements to master in the study of a living language. For another reason the preposition is very important, viz., the preposition + case has supplanted and is continuing to supplant the case alone, directly dependent upon a verb or noun. The two together are much more expressive and explicit than a case alone. In The Ciefe test Safers, the genitive may be subjective or objective, but there is no ambiguity about hie Liebe jum Safer, best Safers Liebe jum Sepne.

CLASSIFICATION AND TREATMENT OF THE PREPOSITIONS ACCORDING
TO THE CASES THEY GOVERN.

302. Prepositions governing the Genitive:

Unweit, mittels, fraft und während; laut, vermöge, ungeachtet; obershalb und unterhalb; innerhalb und außerhalb; diesseits, jenseits, halben, wegen; statt, auch längs, zusolge, trop.

These are all cases of substantives or adjectives (participles) and their number might be easily increased, e. g., by beginglide, with reference to; angefidets, in the face of; feitens, on the part of; immitten, in the midst of, etc.

(The order is the one in which they are given in German grammars. The semicolon shows the ends of the lines of the doggerel.)

We comment in alphabetical order briefly upon those that seem to require comment. Often a mere translation will suffice.

- 1. An flatt, an flatt, flatt, + instead of. Draud (from which, from whose breast) flatt der goldenen Lieder ein Blutzfrahl hoch auf fpringt (Uh.). An Tochter flatt, in daughter's stead. Statt sometimes with the dative. It also governs an infinitive like chuc, translated by "without + participle." See Infinitive, 291, 1.
- 2. Außerhalb + outside of; innerhalb + inside of; oberhalb, above; unterhalb, on the lower side of, below. They are all more expressive than the simple forms. They rarely govern the dative.
- 3. Die ffeit (8), jenfeit (8), this side of, on the other side, beyond. Rarely with the dative.
 - 4. Salben, halber, halb, on account of, + in behalf of. Follows

its case. Frequent in composition: brokalb, therefore; mrinthalben, on my behalf; Alters halber, on account of age. Comp. wegen and willen.

- 5. Rraft, according to, by virtue of. Rraft bes Gefetes; fraft bes Amtes. Formerly only in Rraft, e. g., daß stets ber liebste (Sohn) . . . in Braft allein bes Rings, bas Saupt, ber Fürst bes Saufes werbe (Le.). Comp. laut.
- 6. Laut, from, mad Laut, laut & (Luther), means "according to,' by." Laut Befehle, by command; laut bes Testamentes, according to the last will and testament.

Plural nouns without articles in which the genitive could not be distinguished stand in the dative: Laut Briefen, according to letters. Your means literally according to a verbal or written statement; fraft gives a moral reason.

- 7. Mittels, mittels (most common), vermittels, by means of, with. Mittelst eines Sammers, eines Bebrers. It is more expressive than mit or burch. Rarely with the dative.
- 8. Db, rare and archaic. With genitive if causal (on account of): with dative if local (above), and temporal (during). Da weinten zusammen bie Grenabier' wohl ob ber Mäglichen Munde (Heine). Ob dem Wald; nid dem Wald (Sch., Tell); ob dem Mare (id.).
- 9. Tree, with genitive and dative, in defiance of, in spite of; in the sense of "in rivalry with," "as well as," always with the dative. Tree bes bestigen Regens subren wir ab. Die Sängerin singt tree einer Nachtigall, as well as a nightingale. Comp. the forms 31 or 31m Tree preceded by a dative: Mir 31m Tree subre s
- 10. Unangefehen, setting aside, unbefchabet, without detriment to, ungeachtet, notwithstanding (very frequent). The last two also with a preceding dative; bemungeachtet is felt as an adverb. These are very modern prepositions. Unweit, unfern, not far from, occur also with dative.
- . 11. Bermöge, in virtue of through, in consequence of, by dint of. Denotes a reason springing from a quality of the subject: vermöge feiner Reblichfeit, through his honesty. We could not say fraft feiner R.; vermöge (and not fraft) großer Anstrengungen, by dint of great efforts. (Perhaps from "nach Bermögen.")
- 12. B ährenb, during. Sometimes with the dative: mahranbem, meanwhile.
 - 13. Begen, on account of, both preceding and following the noun;

also with the dative. Begen denotes also a motive and an impediment. Seiner Größe wegen tennte bas Schiff nicht burch ben Kanal. Der Müller war wegen seiner Stärke berühmt. Begen from von — wegen, still common in "von Rechts wegen," strictly, in justice.

- 14. Willen, generally um willen, denotes the purpose, the advantage or interest of a person. Um meiner Ruhe willen erstären Sie sich denstäher (Sch.). Um des Schnes willen, um meinerwillen, for the sake of or in the interest of the son, for my sake. Wegen, halben, and willen all appear with pronouns, and are used promiscuously.
- 15. Bufolge, as frequently with the dative, denotes the result, "in consequence of." Bufolge for Auftrages, in consequence of the commission; for Beratroungen sufolge, in accordance with the verbal agreements.

Prepositions governing the Dative.

- 303. Schreib: mit, nach, nachft, nebst, famt; feit, von, zu, zuwi'ber; entgegen, außer, aus stets mit bem Dativ nieber.
- 1. At b, still used in the Alemanic dialect (Baden, Switzerland) as a preposition. In business style it denotes the place at which merchandise is delivered or the time after which anything is to be had: ab Damburg, ab Renjahr, ab = "all aboard."
- 2. Aus denotes the starting point of a motion, the opposite of in + accusative, = "out of," "from": Aus den Augen, aus dem Sim, "out of sight, out of mind": aus dem Benfer schen, to look out of the window. Origin and descent: aus alten Beiten, from olden times; aus Dannover, from Hanover. Material: aus Achm, of clay: aus Mehl, of meal. Motive: aus Mitteld, Daß, from pity, hatred. Origin also in aus Ersahrung, from experience; aus Berschen, by mistake. Notice the idiom: aus Köln gebürtig, a native of Cologne, born in C.
- 3. Au fier, outside of, beside, the opposite of in + dative. Denotes also exception and "in addition to." More frequent in the figurative than in the local sense, because auterball is more precise. Muter bem Daufe, not at home; auter Daufe specifen, to dine out; auter side sein, to be beside one's self. Nur ber Vetter war auser mir ba. Mark once the genitive auser Landes gesen, to go to foreign parts; also the accusative in auser asset several severa
- 4. Bei. Original meaning is nearness, hence by, near, with: bei ber Scheune, near (by) the barn; bei ber Tante, near the aunt or at the house of

the aunt; bein Zene, by Jove; bie Schlacht bei Wörth, the battle of W.; bei Tisch sein, to be at dinner; bei Tag und bei Nacht, by day and by night; bei (einem) Namen nennen, to call by name (but Friedrich mit Namen, Frederic by name); bei (rare) neunzig Gesangenen, about ninety prisoners; bei Strase wen zehn Mart, ten marks sine. Ich habe tein Geb bei mir, I have no money about me. The accusative stands in bei Seite segen, bringen, stellen, to lay, put aside. In M. H. G. after verbs of motion regularly the accusative, but in the spoken language now disearded, though still sound in the classics.

- 5. Binnen, sometimes with genitive, expresses now time only, "within": binnen brei Jahren, within three years. < be innen.
- 6. Entge'gen denotes approach, both friendly and hostile, towards and against; stands generally after its case. Wir gingen bem Frembe ent gegen; fuhren bem Winbe entgegen. With verbs of motion it frequently forms separable compounds and is really more adverb than preposition.
- 7. Gegen ü'ber, opposite, facing; generally after its case; rarely gegen über. Dem Schloffe gegenüber.
- 8. O e m å ß, preceding and following its case, according to, in accordance with; really an adjective. Dem Bersprechen gemäß, according to the promise; gemäß bem Ociege, according to the law. It is more definite than nac.
- 9. Wit means "in company with," "with"; denotes presence, accompanying circumstances and instrument. Arm in Arm mit dir, so service it mein Sahrhundert in die Schranken (Sch.). Mit Frenden, gladly; eile mit Beile, hasten slowly; mit Fug und Recht, justly (emphatic); mit der Zeit pflüdt man Resen, in due time . . .; mit Ileiß, intentionally; mit dem Pseil, dem Bogen (Sch.). (See mittels, 302, 7.)
- 10. Na ch denotes originally a "nearness to," being an adjective (nahe); then "a coming near to," and generally corresponds to Eng. "after" in "point of time, order. With verbs of motion (literal and figurative) "to" and "after." Nach choose firehen, sich shure, to strive after, long for; nach Mitternacht; nach dir somme ich, it is my turn after you; nach Berlin reisen. "In accordance with," not so expressive as "gemäß," in this sense often after its case. Nach ben Geschen verbient er ben Teb; bem Bortsaute nach, literally. Aim: nach choose scholagen, schiefen, to strike at, shoot at. Nach choose schmeden, riechen, etc., something has the smell, taste of; nach choose arteilen, to judge by; nach choose or jemanb schiefen, to send for. (See 311 and gemäß.)

- 11. A å dift is the superlative of nahr (nad), and denotes very close nearness to in place, order, = + "next to." Bunådit has no different force. Ind nådit dem Echen was critchit du bir? (C.).
- 12. Rebst denotes very loose connection and connects also things and persons not necessarily belonging together; samt, on the other hand, only what naturally belongs together. Auf einer Stange trägt sie einen Sutnebst einer Fahne (Sch.) (a hat and a banner).
- 13. Samt, mit samt, zu samt, "together with." Mid samt meinem gangen Geere bring' ich bem Gerzeg (Sch.). See nebst. It implies a close union, which does not lie even in mit.
- 14. Seit, older fint, = + since, denotes the beginning of an action and its duration to the present moment. Seit diesem Tage schweigt mir jeder Mund (Sch.). Er ist berein seit medreren Stunden (id.), it is several hours since he came in (into the city). Seit einigen Jahren zahlt er seine Jinsen, For several years he has paid no interest.
- 15. Bon, "from," denotes the starting point of a motion or action in time and place. Its case is often followed by another preposition or by her. Bon her Hand in hen Mund; von Borten fam's zu Schlägen, from words they came to blows. Bon Often his Pfinghen iff fünfzig Tage. Origin: Balther von her Begelweide. Hürft von Bismarch. Herr von Schulemburg. Hence von in the names of persons denotes nobility: Herr von So und So. Bon Jugend anf; von Grund aus, thoroughly; von Often her. Separation: frei, rein von etwas. Supplants the genitive: ein Mann von Ehre, von großen Kenntnissen; ber Pöbel von Paris. Denotes the personal agent: Baltenstein wurde von Viccolemini hintergangen und von vielen Generalen im Sticke (in the lurch) gelassen. Notice: Schurfe von einem Wirt (Le.). Cause: naß vom (with) Tau, vom Regen.
- 16. Bu denotes first of all the direction toward a person (but nach toward a thing) + "to": zu jemanh gehen, fommen, sprechen, etc. Sie sang zu ihm, sie sprach zu ihm (G.). Bu sich sommen, "come to"; etwas zu sich steden, to put something in one's pocket. (This is its only use in O. H. G. In M. H. G. its use spread.) In dialect and in poetry it stands before names of cities and towns (= at). Bu Strasburg auf der Schanz (Folk-song). In sein Gast zu Schwaz (Sch.).

In certain very numerous set phrases and proverbs au stands before names of things. Direction: von Ort au Ort, from place to place; au Bettie), aur Kirche, aur Schule, au Grunde, au Rate gehen = "take council":

many loose compounds with fahren; ju Fall, ju Statten, ju Schaben, ju Enbe, ju Ehren fommen; ju Schanden, ju Nichte, jum Schelme werben.

Place where?: "zu beiden Seiten bes Mheins" (Song); zu Hause, zur Hanbseit; zu Küßen liegen. Manner of motion: zu Land, zu Wasse, zu Pserd (zu Neß), zu Wagen, zu Fuß = Eng. "by" and "on." Transition or change: zum König machen, wählen, erneunen; zum Aarren, zum besten haben, to make a sool of. Degree or size, numbers: zum Teil, in part; zu Hunderten, by the hundred; zu breien waren wir im Zimmer, there were three of us in the room; zum Tede betrübt ((1.), sad unto death. Combination of things: Nehmen Sie nie Psesser, Salz oder Senf zu (with) dem Ei? Ost batt' er saum Basser zu Schwarzbret und Burst (Bü.). Notice the use of zu besore nouns sollowed by hinein, heraus, etc.: zum Ihre hinaus; zum Fenster heraus. Time (rare): Und sommt er nicht zu Ostern, so sommt er zu Trinita't (Folk-song). After the noun = "in the direction of," "toward": dem Dorse zu, toward the village; nach dem Dorse, to the village.

Prepositions governing the Accusative:

- 304. Bis, turch, für, gegen, ohne, fonder, um, wider.
- 1. Bis, till, until, denotes the limit in time and space. When denoting space it is followed by other prepositions, except before names of places. The nonns of time rarely have an article or pronoun. Bis Fastmath; bis and Ende after Dinge; bis hierber and night weiter; bis an den hellen Tag; nemning bis hundert Marf; bis Braumschweig. (Bis $< bi + a\mathbf{z}, + \text{Eng.}$ by + at.)
- 2. Durch, + "through," denotes a passing through: burch ben Walt, burchs Nabelicht. Extent of time (the case often followed by bindurch): burch Jahrzehnte hindurch; die ganze Zeit (hin)burch. Cause and occasion, very much like aus: burch Nachlässigsteit, durch eigene Schuld. Means: burch einen Pseil verwunden, durch einen Diensmann besorgen, attend to through a porter. (Durch more definite than mit. See this and mittels. It denotes now no longer the personal agent.)
- 3. Für, + for, denotes advantage, interest, destination: Wer nicht für mich ist, ist wider mich (B.). Er sammelt für die Armen. Die Scheere ist tein Spiel zeug sür Kinder. Die Wahrheit ist verhanden für den Weisen, die Schönheit für ein sühlend herz (Sch.). Substitution and price: Da tritt sein anderer sür ihn ein (Sch.). Mein Leben ist sür Geld nicht seil (Bü.). Limitation: Ich sür meine Verson. Genug sür dieses Wal. Id zeigtet einen seden Mut. . . für enre Jahre (Sch.). Stück sür Stück, point by point. In its old sense (local) only in certain phrases: Schritt sür (by) Schritt, Tag sür (by) Tag, Sat sür (after) Sat. (See vor.)

4. Wegen denotes "direction toward," but with no idea of approach that lies in zu and nach. It implies either friendly or hostile feeling if persons are concerned: "towards," "against." Gegen die Band lehnen; gegen den Strom schwimmen. Benn ich mich gegen sie verpslichten sollt, so müssen sie's anch gegen mich (Sch.). Gibt es ein Mittel gegen die Schwindsucht? Gegen Dummbeit kämpsen Götter selbst vergebens. Exchange, comparison: Ich wette hundert gegen eins. Noland war ein zwerg gegen den Niesen. Indefinite time and number: "towards." Der Kranke schlief erst gegen Worgen ein. Der Feldherr hatte gegen dreibundert tausend Seldaten. Gegen drei Uhr. Gegen once governed the dative almost exclusively and traces of it are still found in Goethe.

O en is still preserved in "gen Simmel." Oen < gen < gen < gen+ again. See entgegen, which implies a mutual advance.

- 5. Ohne, "without," the opposite of "mit," "bei." Mit ever obus Mansel, gitt mir gleich (Sch.), "With or without reserve, it is all the same to me." Ein Ritter ohne Furcht und Tabel. In "obuschen" is a remnant of the D. in M. H. G.; preiselsehne of the G. occurring after the M. H. G. adverb âne, from. Emas ift nicht obus, there is something in it (Coll.). Ohne as Composition, see 489, 3; + infinitive, see 291, 1.
- 6. Souter, "without," is now archaic except in set purases like "femer (Mciden," "femer , 3weifel," "without compare," "no doubt," + Eng. asunder. Once governed the accusative and genitive.
- 7. Um, "around," "about." Und Die Conne, fie machte ben weiten Ritt um bie Welt (Arndt). Und um ihn die Großen ber Arone (Sch.). Ber or berum often follows the case: In einem Salbfreis ftanden um ihn ber feche ober fieben große Rönigsbilder (Sch.). It denotes inexact time or number: Um Mitternacht begrabt ben Leib (Bü.). Um brei bundert Berer, an audience of about three hundred. (Gegen is rather "nearly," um means more or less.) But num breiviertel fünf" means "at a quarter to five." "At about" would be "ungefabr um" or "um ungefabr," c. y., ungefabr um 6 lbr. It denotes further exchange, price, difference in size and measure: Mug' um Muge, Bahn um Babn (B.). Alles ift euch feil um Welb (Sch.). Um zwei Boll zu flein. Er hat fich um zwei Pfennige verrechnet. Loss and deprivation : um's Leben bringen, to kill; um's Weld tommen, to lose one's money. Da war's um ihn geschehn (G.), He was done for. Ber brachte mich brum? (um beine Liebe) (F. 4496), Who robbed me of it? It denotes the object striven for: um ctwas werben, spielen, fragen, bitten, streiten, beneiben, etc. The object of care, mourning, weeping ; Wein' um ben Bruber, bech nicht um ben Geliebten weine (Sel.). Schabe war's um eure Saare (id.). Richt um biefe thut's mir leib (id.).

8. Wiber, "against," always in the hostile sense. Denotes resistance and contrast: Was hifft und Wehr und Waffe wider den? (Sch.). Es geht ihm wider die Natur, It goes against his grain. + Eng. "with" in withstand.

Prepositions governing the Dative and Accusative.

- 305. Un, auf, hinter, in, neben, über, unter, vor, gwifchen.
- 1. In answer to the question whither? they require the accusative. In answer to the question where? the dative. Pflange die Bäume vor das Haus. Die Bäume stehen vor dem Hause.
- 2. In answer to the question how long and until when? they require the accusative. In answer to the question when? the dative: Im Jabre 1872 wurte Straßburg wieter als tentiche Universität eröffnet. Wir reisen auf vierzehn Tage ins Bat.
- 3. When an, ani, in, über, unter, ver denote manner and cause, then ani and über always require the accusative, but an, in, unter, ver generally the dative, in answer to the questions how and why? Wir frenen und über (= over) and ani (= looking forward to) seine Antunit. Ani die se Beise, but in die ser Beise. Der Bettler weinte vor Frenden über die herrliche Gabe.

The above general rules, as given in Krause's grammar, will be found of much practical value.

306. 1. $\mathfrak{A}\mathfrak{n}$ + Dative.

After nouns and adjectives of plenty and want: Mangel an Gelb, reid an Gütern. After adjectives when the place is mentioned where the quality appears: an beiden Füßen lahm, an einem Ange blind. After verbs of rest, increase or decrease, and after those denoting an immediate contact or a perception: An der Duelle saß der Anade (Sch.). Es sebtl an Büchern. Der Auswanderer litt am Abechselfieder. Der Bigeuner führt den Bären an einer Kette. Den Begel eisennt man an den Federn (Prov.). It denotes an office and time of day: am Ibeater, an der Universität, am Amte angestellt sein, to hold an office at . . . ; am Mergen, Abend; es ist an der Beit . . . , it is time

2. $\mathfrak{A} \mathfrak{n} + Accusative$.

After benfen, crimeru, mahnen and similar ones, and verbs of motion. Denfet an ben Ruhm, nicht an bie Gefahr. Sehen Sie sich boch and Benster (near the window). Inexact number: an bie brei mal hunbert tausend Mann (as many as). From its English cognate "on" an differs very much in meaning. "On" generally is aus. See also 300, 2.

3. \mathfrak{Auf} + "upon." For \mathfrak{auf} + Dative, see 305, 1, 2, 3. It denotes rest or motion upon the surface.

\mathfrak{Auf} + Accusative.

Stands after verbs of waiting, hoping, trusting, etc., e.g., auf etwas warren, hoffen, sich besunen (recall), gesaßt sein, sich stenen (see 305, 3), verzichten, (es) auf etwas wagen, hören. Here it stands generally for the old gen. without preposition. Ich sann mich auf die genauen Umstände nicht besunen, I cannot recall . . . Der Hund wartet auf sein Fressen. Merse auf die Worte des Lehrers. Treht nicht auf euer Recht (Sch.). After adjectives denoting pride, envy, anger, malice, e.g., eisersüchtig, neidisch, stell, böse, erbost eisersüchtig auf seine Ehre (Sch.); stolz auf seine Unschuld; erbost auf den Gesangenen (über would mean cause). Exact time, limit, and measure; often with "bis." Here belongs the superlative, see 300, 2. Bis auf's Blut. Bis auf Speis und Trant (Le.). Es ist ein Viertel auf brei, a quarter past two. Auf die Minn te, Schu'nde, auf Schusweite, at shooting distance. Bis auf die Reige, to the last drop. Auf sieden schon eines wieder (Le.). (Nathan had "toward" or "as a return for "his seven dead sons one child in Recha.) Auf eine Marf geben hundert Psennige.

4. hinter + "behind," opposite of "vor." See 305, 1, 2.

It denotes inferiority: Die französische Artisserie fland weit hinter der dentschen zurück (ambiguous, either stood far back of the G. or was much inferior to the G.). Notice the following idioms: sich hinter etwas machen, to go at with energy. Ich fann nicht dabinter femmen, I cannot understand it. Es hinter den Ohren haben, to be sly (coll.); binter die Ohren schagen, to give a box on the ear: sich etwas hinter die Ohren schreiben, to mark well.

5. $\mathfrak{J}\mathfrak{n} + i\mathfrak{n}$, into (Λ) .

The German and English prepositions are more nearly identical than any other two. See 305, 1, 2.

3n + Accusative.

Denotes direction, including transition, change, division : Wenn ber Leib in Staub zerfallen, lebt ber große Name noch (Sch.). Deutschland zerriß auf biesem Reichstage in zwei Religio'nen und zwei politische Partei'en (id.).

- 6. Meben, near, by the side of. See 305, 1, 2. < encben, lit. "in a line with."
 - 7. über + over, above. See 305, 1, 2, 3.

über + Accusative.

After verbs denoting rule and superiority over, e.g., hereschen, siegen, versügen (dispose); laughter, astonishment, disgust, in general an expression of an affection of the mind, e.g., über etwas lachen, exstancen, sich . . . betlagen, sich . . . entrüsten, sich ärgern. (For an older simple genit.) Karlber Große siegte über die Sachsen. Das Lestament versügt über ein großes Vermögen. Wie studte der Vöbel über die neuen Livre'en (G.). Die Gesangenen bestagen sich über ihre Behandlung. Über sein Venchmen babe ich mich recht geärgert. It denotes time and excess in time, number, measure: über's Jahr, a year hence, only in certain phrases, duration: über Racht, die Racht über. Den Sabbath über waren sie stille (B.). Über ein Jahr, more than a year (ambiguous, either "more than a year" or "a year hence"). Über drei tausend Kanonen. Über alle Begriße schön, beautiful beyond comprehension.

When it denotes duration or simultaneousness, or when the idea of place is still felt, then the dative follows; when it denotes the reason then the accusative follows. This is clear when the same noun stands in both cases, as in 3th bin über bene Buthe eingestellasen, means "while reading it I fell asleep." It is not dat Buthe eingestellasen means "it was stupid, therefore I fell asleep." Über der Bestereibung da vergess ich den gamen Krieg (Sch.). Schade, daß über dem schönen Wahn der Lebens desse Dahin gehr (Sch.).

Notice von ciwas and über ciwas frieden. Ich habe bavon gefrieden, I have mentioned it. Ich habe barüber gesprochen, I have treated of it, spoken at length.

8. Unter + under. See 305, 3.

In the abstract sense this rule holds good. It denotes protection, inferiority, lack in numbers (Dative, opposite of über), mingling with, contemporaneous circumstance (D.). It stands for the partitive genit. (= among). Unter tem Schute. Der Kelbwebel steht unter tem Officier. Wer will unter tie Sobaten, der . . . , he who wants to become a soldier (Folk-

song). Er ist brunter geblichen, he did not reach the number. Cambrai öffnete seinem Erzbischose unter (amid) freudigem Juruse die Thore wieder (Sch.), Wer unter (among) biesen (D.) reicht an unsern Friedland I (Sch.) (von diesen would be "of these"). It denotes time when none of the exacter modes of expressing time is used: Wir sind geboren unter gleichen Sternen (Sch.). Unter der Regierung der Königin Victoria — in the reign; während implies not a single act, but a commensurate duration, — during. Der Safrista'n schlief mährend der Predigt, but ging unter der Predigt hinand. In "unterdessen," and other compounds of that class, indessen, etc., the gen. is probably adverbial and not called for by the preposition.

See aviiden.

9. \(\mathbb{g} \, \mathbb{v} \, \tau + \text{ before, in front of. See 305, 1, 2, 3.} \)

Bor + Dative.

Introduces the object of fear and abhorrence: Kein Eisengitter schütt vor ihrer Lift (Sch.). Ber gewissen Erinnerungen möcht' ich mich gern hüten (id.). Mir graut vor dir. Time before which anything is to happen or has happened: Der König ist gesennen, vor Abend in Madrid nech einzutressen (Sch.). Ber dreißig Jahren, thirty years ago. Ber acht Lagen, a week ago. Hindrance and cause: Die Gresmutter wird vor Kummer sterben (Sch.). Den Bald vor lauter Bäumen nicht sehen (Prov.). Ber Hunger, vor Turst sterben. Preserence: vor alten Dingen, above all things; herrlich vor alten.

Bor and für are doublets and come from for and furi respectively. In M. H. G. $f\ddot{v}r + \Lambda$, answered the question whither? vor + D, the question where? In N. H. G. they were confounded, even in Lessing very frequently, but in the last seventy years the present syntactical difference has prevailed. Goethe and Schiller rarely confound them.

10. 3mijden.

"Between" two objects in place, time, and in the figurative sense. Rein muß es bleiben zwischen mir und ibm (Sch.). Die Welfensäule kam zwischen das heer Agupter und das heer Israels (B.). See 305, 1, 2; also unter = among, sub 8.

SYNTAX OF THE CONJUNCTIONS.

307. The conjunctions are divided: 1. Into the coordinating, like unt, tenn, etc.; 2. Into the subordinating, c. g., weil, ta, als, etc. They are treated in the General Syntax, where see the various clauses.

GENERAL SYNTAX.

I. THE SIMPLE SENTENCE

308. Subject and verb make up the simple sentence. This sentence may be expanded by complements of the subject and of the verb. The subject may be either a substantive, a substantive pronoun, or other words used as substantives. The attributes of the subjects may be adjective, participle, adjective pronouns, numerals. These are adjective attributes. Substantives, substantive pronouns, and the infinitive are substantive attributes. Their relation to the subject may be that of apposition and of coordination; or they may be connected by the genitive, or by preposition + case in subordi-Preposition + case is more expressive than the nation. genitive alone, when the subject is to be defined as to time. place, value, kind, means, purpose.

The predicate is either a simple verb or a copula + adjective or substantive or pronoun which may be again expanded like the subject. The complements of the verb are object and adverb. The object is either a noun, substantive pronoun, or other words used as nouns. It stands in the accusative, dative or genitive, or is expressed by preposition + case. The adverb qualifies the verb, adjective, and other adverb. It is either an adverb proper or preposition + case of substantive or what is used as such. It may also be a genitive or an accusative.

- **309.** As to form the main sentences may be divided as follows:
- 1. Declarative sentences, which either affirm something of the subject or deny something with regard to it. Affirmative: sturz ist der Schmerz und ewig ist die Freude (Sch.). Du hast Diama'nten und Perlen (Heine). Negative: Das Leben ist der Güter

höchstes nicht (Sch.). Sie sollen ihn nicht haben, den freien deutschen Rhein (Beck).

- 1. The double negative is still frequent in the classics and colloquially, but it is not in accordance with correct usage now: Reine Lust von seiner Seite (G., classical). Man sieht, daß er an nichts seinen Anteil nimmt (F. 3489) (said by Margaret, coll.). After the comparative it also occurs in the classics: Bir musien das Bers in diesen nächsten Tagen weiter fördern, als es in Jahren nicht gedich (Sch.).
- 2. After verbs of "hindering," "forbidding," "warning," like verbüten, verhindern, warnen, verbieten, etc., the dependent clause may contain "nicht": Nur hütet euch, daß ihr mir nichts vergießt (G.). Nimm bich in Acht, daß bich Nache nicht verberbe (Sch.).
- 3. When the negative does not affect the predicate, the sentence may still be affirmative. Nicht mir, ben eignen Augen mögt ihr glauben (Sch.). But nicht mir stands for a whole sentence.
- 2. Interrogative sentences: Haft du das Schloß gesehen? (Uh.). Wer reitet so spät durch Nacht und Wint? (G.). Double question: War der Bettler verrückt oder war er betrunken? Glaubst du das oder nicht? Willst du immer weiter schweisen? (G.). Wer weiß das nicht?

For the potential subjunctive in questions, see 284, 3.

For the indirect question, see 325, 2.

3. The exclamatory sentence has not an independent form. Any other sentence, even a dependent clause, may become exclamatory: D, tu Walt, v ihr Berge trüben wie seit ihr so jung geblieben und ich bin worten so alt! (Uh.). Das ist tas Los tes Schönen auf ter Erre! (Sch.). Was tant' (owe) ich ihm nicht alles! (id.). Wie ter Knabe gewachsen ist!

For the imperative and optative sentences, see 284, 2; 286.

310. Elliptical clauses generally contain only the predicate or a part of it, including the object or adverb. Guten Morgen! Gelt! Truly! Getroffen! You have hit it! Langiam! Schuelt! etc. It is very frequent in the imperative, see 287.

Proverbs often omit the verb: Viel Geschrei und wenig Wolle. Kleine Kinder, sleine Sorgen; große Kinder, große Sorgen. See 309, 3, in which the last examples are really dependent questions.

Concord of Subject and Predicate.

311. The predicate (verb) agrees with the subject in number and person.

Two or more subjects (generally connected by unt) require a verb in the plural: Unter ten Anwesenten wechseln Furcht und Erstaunen (Sch.). Doch an tem Herzen nagten mir ter Unmut und die Streitbegier (id.).

- 1. If the subjects are conceived as a unit and by a license greater in German than in English, the verb may stand in the singular; also in the inverted order if the first noun is in the singular. Ex.: Bas ift bas für cin Mann, daß ihm Bind und Meer gehorsam ist (B.). Eh' spreche Welt und Nachwelt, etc. (Sch.). Da sommt der Müller und seine Anechte. By license: Sagen und Thun ist zweierlei (Prov.). Das Mistrauen und die Eisersucht . . . erwachte bald wieder (Sch.).
- 2. The plural verb stands after titles in the singular in addressing royalty and persons of high standing. In speaking of ruling princes the plural also stands. Servants also use it in speaking of their masters when these have a title. Ex.: Eure (Ew.) Majeftät, Durchlaucht, Ercellen bejehlen? Seine Majeftät der Kaifer haben geruht, etc. Der herr Gebeime Hofrat find nicht zu hause. Die herrschaft find ausgegangen.
- 312. After a collective noun the verb stands more regularly in the singular than in Eng. Only when this noun or an indefinite numeral is accompanied by a genitive pl., the plural verb is the rule. In early N. H. G. this plural was very common. Die Menge flob. Alle Belt nimmt Teil (G.). Und das junge Bolf der Schnitter fliegt zum Tanz (Sch.) Dort kommen ein paar aus der Küche (Sch.). Eine Menge Eier sind verdorben.
 - 313. When the subject is a neuter pronoun, et, dies, das, etc., the neuter verb agrees with the predicate noun or substantive pronoun in number: Das waren mir selige Tage (Overbeck). Es sind die Früchte ihres Thuns (Sch.). Es zogen drei Jäger wohl auf die Birsch (Uh.). In this case es is only expletive. Wer sind dies?

- 314. When subjects are connected by entwerer over, night nur fourern and, werer nod, fourth als (and), the verb has the person and number of the first subject and joins this one if the subjects are of different persons. The verb for the second subject is omitted. Entwerer tu gehit (or gehit tu) over id). Trits war id idult, trits cr. Subjects of the same person connected by the above correlatives; by ever, nebit, mit, famt have as a rule a singular verb and the verb joins the second subject. Tem Belie fann werer Fener bei ned Baijer (Sch.), Neither fire nor water can harm those people.
- 315. If the subjects are of different persons, the first has the preference over the second, the second over the third. Moreover, the plural of the respective pronouns is often added. Ter to unt ich, wir fint aus Eger (Sch.). Du unt ter Better, (ihr) geht nach Haufe.

The adjective as a predicate or attribute has been sufficiently treated under the adjective, see 210–225.

- 316. The noun as a prediente agrees with the subject in case; if the subject is a person, also in number and gender, but in the latter only when there are special forms for masculine and feminine. See 167. Ex.: Die Lettgeschickte ist tas Lettgesicht (Sch.). Die Not ist die Mutter der Ersindung (Prov.). Das Märchen will jest Erzicherin werden, zuerst wollte sie Schauspielerin werden.
- 1. If one person is addressed as Sie or Ihr, the substantive stands of course in the singular. "Sie find ein großer Meister im Schießen." Poetic and emphatic are such turns as: Regierte Recht so läget ihr vor mir im Staube jeht, benn ich bin Euer König (Sch., spoken by Maria Stuart).
- 317. The substantive in apposition has the same concords as the substantive in the predicate, only the rule as to case is frequently found unobserved in the best writers. Bus Benus band, die Bringerin des Glüds, fann Mars, der Stern des Unglüds

schnell zerreißen (Sch.). Ihr kennet ibn, ben Schöpfer kühner Geere (id.).

The apposition may be emphasized by namlich and als: Ihnen, als einem gereisten Manne, glauben wir.

II. THE COMPOUND SENTENCE.

318. The compound sentence consists of two or more clauses, which may be coordinate (of equal grammatical value) or subordinate (one dependent upon the other).

COORDINATE SENTENCES.

We may distinguish various kinds of coordinate sentences, which may or may not be connected by conjunctions.

- 319. Copulative Sentences. The conjunctions unt, auch, tecgleichen, gleichfalls, ebenfalls, and their compounds, tecgleichen auch, so auch, ebenso auch; nicht nur—sontern auch; nicht allein—sontern auch; sowohl—als (auch); weter—nuch indicate mere parataxis. Zudem, außerdem, überdies, ja, sogar, ja sogar, vielmehr emphasize the second clauses. Partitive conjunctions are teils—teils, halb—halb, zum Teil—zum Teil. Ordinal conjunctions are erstens—zweitens, etc.; zuerst—tann—serner, envich, zulest; halv—balt. Explanatory are nämsich, unt zwar. Ex.: Die Müh' ist klein, der Spaß ist groß (F. 4049). Halb zog sie ihn, halb sant er hin (G.). Ich will weder lengnen noch beschönigen, taß ich sie beredete (id.). Nicht allein die ersten Blüten sallen ab, sondern auch die Früchte (id.).
- 1. Notice that the adverbial conjunctions such as balb, sufert, bann, noter noch, halb, tells, etc., always cause inversion. Some admit of inversion, but do not require it, c. g., and, erflens, nämlid. The ordinal conjunctions and nämlid are frequently separated by a comma, then no inversion takes place. Erflens ift es so ber Branch, sweitens will man's selber and (Busch).
- 320. Adversative Sentences. 1. One excludes the other (disjunctive-adversative): ver, or, entwerer ver, jount (else),

andernsalls, otherwise. Ex.: Er (Wallenstein) mußte entweder gar nicht besehlen oder mit vollkommener Freiheit handeln (Sch.). One contradicts the other (contradictory-adversative): sondern, vielmehr, sondern . . . vielmehr. The first clause contains nicht, zwar, freilich, allerdings, wohl. So wagten sie sich nicht in die Rähe der Feinde, sondern kehrten unverrichteter Sache zurück (Sch.).

2. The second sentence concedes the statement of the first in part or wholly. The first may contain nicht, etc., as above; the second has aber, often in the connection aber took, removed aber, aber gleichwohl; allein, übrigens; nur. Allein is stronger than aber.

Mark the contrast between aber and sendern, Eng. but. Aber concedes, sondern contradicts. Er war zwar nicht frank, aber doch nicht dazu aufgelegt, "but he did not feel like it." Er war nicht frank, sondern er war nur nicht dazu aufgelegt (he only did not feel like doing it). Biele sind berusen aber wenige sind auserwählet (B.). Den Ungeheuern, den Gigantischen hätte man ihn (Corneille) nennen sollen, aber nicht den Großen (Le.). Wasser thut's freisich nicht (It is not the water that is effective in baptism), sondern das Wort Gottes, so (which) mit und bei dem Wasser ist (Lu.).

- 3. The second sentence states something new or different or in contrast with the first without contradicting or excluding or limiting the same. It occurs commonly in narrative and may be called "connexive- or contrasting-adversative." Conjunctions: after, hingegen, tagegen, übrigens, treptem, gleichwohl, inteffen, etc. Tie Beleidigung ift groß; after größer ift seine Gnate (Le.). Es scheint ein Rätsel und boch ist es seins (G.). Es ist die schöffnung; boch ist es nur eine Hoffnung (Sch.).
- 321. Causal Sentences. One gives the reason or cause for the other. Conjunctions: b(a)rum, beswegen, baher, benn, nämlich, etc. The clause containing the reason generally stands second, the one beginning with "benn" always. Notice benn, "for," always calls for the normal order. Ex.: Solvaten waren tener, benn die Menge geht nach bem Glück (Sch.). Eine Durchlauchstigkeit läßt er sich nennen; brum muß er Solvaten halten können (id.).

322. Illative Sentences. One sentence is an inference or effect of the other. Closely related to the causal. Conjunctions: [v, a'liv, somi't, folglich, mithi'n, te'mnach, etc. Meine Rechte (right hand) ist gegen ten Truck ter Liebe unempsintlich . . . sv (then) seid ihr Göh von Berlichingen (G.). Die Sonnen also scheinen und nicht mehr (Sch.).

SUBORDINATE SENTENCES.

- **323.** We shall distinguish three classes of dependent clauses, according to the logical value of the part of speech they represent:
 - 1. Substantive clauses, with the value of a noun.
 - 2. Adjective clauses, with the value of an adjective.
 - 3. Adverbial clauses, with the value of an adverb.

SUBSTANTIVE CLAUSES.

- 324. The clause is subject: Tas eben ist der Fluch der bösen That, daß sie sortwährend Böses muß gebären (Sch.). Mich renet, daß ich's that (id.). Predicate (N.): Tie Menschen sind nicht immer was sie scheinen (Le.). Object (A.): Glaubst du nicht, daß eine Barnungsstimme in Träumen vorbedentend zu und spricht? (Sch.). Bas man schwarz auf weiß besitzt, kann man getrost nach Hause tragen (F. 1966-7). Dative: Bohl dem, der bis auf die Neige (to the very end) rein gelebt sein Leben hat (He.). Genitive: West das herz voll ist, des geht der Mund über (B.). Apposition: Den edeln Stolz, daß du die selbst nicht genügest, verzeih' ich die (Ct.).
- **325.** As to their contents the substantive clauses may be grouped as follows:
- 1. Daß, or declarative clauses, always introduced by "taß." Schon Sofrates lehrte, daß die Seele des Menschen unsterblich sei, or die Lehre, daß die Seele . . . , or wir glauben, daß die Seele . . .

More examples in 324.

2. Clauses containing indirect questions: a. Questions after the predicate always introduced by vb; in the main clause may stand as correlatives es, das, dessen, davon, etc. Er hatte nicht geschrieben, ob er gesund geblieben (Bü.). (See F. 1667-70). Questions after any other part of the sentence, introduced by an interrogative pronoun, by an interrogative adverb, simple or compounded with a preposition, viz., wer, was, wir, we, wann, womit, wober, wohin, etc. Ex.: Fraget nicht, warum ich traure (Sch.). Begreifft bu, wie andachtig schwarmen viel leichter als See F. 1971. aut bandeln ift? (Le.). Noch fehlt und Runte, was in Unterwalten und Schwyz geschehen (Sch.). c. The question may be disjunctive, introduced by ob - over; ob - over ob; ob - ob. Ex.: Aber jag' mir, ob wir stehen over ob wir weiter geben (F. 3906-7). Und ch' der Tag fich neigt, muß fich's erflären, ob ich den Freund, ob ich ben Bater foll entbehren (Sch.).

REMARKS.—1. The mood in 1 and 2, according to circumstances, is either the indicative or the potential subjunctive. See the examples sub 1 and in 324.

- 2. In "baß"-clauses the other two word-orders are also possible, but without baß: Sefrates lehrte, die Seele sei unsterblich. Es wurde behauptet, gestern babe man ihn noch auf der Straße gesehen.
- 3. When the subject is the same in both clauses or when the subject of the dependent clause is the object of the main clause, in short, when no ambiguity is caused, the infinitive clause can stand in place of baß + dependent order. Man bessit, bas untergegangene Schiss ned zu heben. Die Velizei hat dem Rausmanne besohen, sein Schild höher zu hängen.
- 3. Clauses with indirect speech—after verbs of saying, asserting, knowing, thinking, wishing, demanding, commanding. They either begin with taß with dependent order or they have the order of the direct speech. The subjunctive is the reigning mood. For examples and tense, see 282.
- 4. Clauses containing direct speech, a quotation: Das Wort ist fret, sagt ber General (Sch.). Der König rief: Ist ber Sänger ba?

ADJECTIVE CLAUSES.

326. The clause is introduced by a relative pronoun or by a relative adverb. Nothing can precede the pronoun in the clause except a preposition. Unless the personal pronoun is repeated after the relative, the verb stands in the third person. Ex.: Du pricht von Zeiten, die vergangen find (Sch.). Die Stätte, die ein guter Mensch betrat, ist eingeweiht (G.). Der du von dem himmel bist, süßer Friede . . . (id.).

For use of the pronouns and more examples, see 255-258.

- 327. 1. The relative pronoun can never be omitted as in English. In several relative clauses referring to the same word, the pronoun need stand only once, if the same case is required; if a different case is necessary, the pronoun should be repeated. This is often sinned against, for instance by Schiller: Sich ba bic Berfe, bic er fabrich and feine Glut geftch, instead of worin er . . . geftcht.
- 2. The relative clauses beginning with wer, was without antecedents are really identical with substantive clauses, e.g., Da scht, daß ihr tiessming saßt, was in des Menschen Sirn nicht past. Für was drein geht und nicht drein geht, ein frastig Bort zu Diensten steht (F. 1950-3).
 - 3. Case-attraction between relative and antecedent is now rare.

Als welcher, denoting rather a cause than a quality, is now archaic, but still quite frequent in Lessing's time. Ancas, als welcher sich an den bleschen (mere) Figuren ergestet, — "Ancas, since he delights . . ." (Le.). Ven der Tragödie, als über die uns die Zeit ziemlich alles daraus (of Aristotle's Poeties) gönnen . . "about tragedy, in so far as time has favored us . . ." (id.). "Da" in the relative clause is no longer usage. Wer da stehet, sehe zu, das er nicht salle (B.).

328. The mood depends upon circumstances. The potential subjunctive (of the preterit and pluperfect) is frequent after a negative main clause. Es ist seine große Start in Deutschand, die der Onsel nicht besucht bätte (= did not visit). The subjunctive of indirect speech also stands. Die Regierung der Bereinigten Staaten beschwerte sich über die Landung sovieler Armen, welche manche europäische Regierung sortschiede.

140

ADVERBIAL CLAUSES.

- 329. They are introduced by the subordinating conjunctions. The main clause often has an emphatic adverb, e.g., asi, tann, ta, tahin, jeht, taher, tarum. So does not, as a rule, stand after dependent clauses expressing time and place, and generally becomes superfluous in English after dependent clauses of manner.
- 330. Temporal Clauses. 1. Contemporaneous action implying either duration or only point of time. Conjunctions: während, indem, index (indeffen), wie, da (all meaning "while," "as"); solange (als); so vit (als); so bate (als); da, wo (rare and colloquial) = when; wenn (wann is old) + "when," refers to the future; als, "when," refers always to the past with the preterit; weil, dieweil, derweil, = + "while," are archaic. Solange, so oft, sobalt are now much more common without gals."

Ex.: Ach! vielleicht indem (as) wir hoffen, hat und Unheil schon getroffen (Sch.). Nur der Starfe wird das Schickal zwingen, wenn der Schwäckling unterliegt (Sch.). Und wie (as) er sibt und wie er lauscht, teilt sich die Flut empor (C.). Als des Sanctus Worte tamen, da schellt er dreimal bei dem Namen ("Sanctus . . ." is part of the mass) (Sch.). Es irrt der Mensch, solang' er stredt (F. 317). Sobald die ersten Lerchen schwirrten (erschien) ein Mädchen schwin und wunderbar (Sch.). Das Eisen muß geschmiedet werden, weil es glüht (Prov.). Will mir die Sand noch reichen, derweil ich eben sab (— while I am loading the musket) (Uh.).

2. Antecedent action, i. c., the action of the dependent clause precedes that of the main clause. Conjunctions: nadyem, after; ra, als, wenn, after, when; jettern, jett, jettem raß (all mean + since); jetale (als), jewie, wie, as soon as; the adverb faum + inverted order.

Ex.: Rimmer (no more) sang ich freudige Lieber, seit ich beine Stimme bin (Sch.). Wenn (after) der Leib in Staub zerfallen, lebt ber große Name noch (Sch.). Und wie er winft mit dem Finger, auf thut sich der weite Zwinger (id.). Naum war der Later tet, so kommt ein jeder mit seinem Ring (Le.). (Notice the inversion.)

Der König verließ Rürnberg, nachdem er es zur Fürsorge mit einer hinlänglichen Besahung versehen hatte (Sch.).

- 3. Subsequent action. The action of the dependent clause follows. Conjunctions: Chr., hever, + "ere", "before"; his, until, with or without daß.
- Ex.: Nie verachte ben Mann, ch' bu sein Inn'red erfannt hast (He.). Bever wir's lassen rinnen, betet einen frommen Spruch (Sch.). Bis die Glode sich ver fühlet, lasst die frenge Arbeit ruhn (id.). Che wir es und versahen (unexpectedly), brach der Wagen zusammen.
- a. The main clause may be emphasized by bann, banale, bann, barauf, and fe, if it follows the dependent clause.

In 2 and 3 the potential subjunctive can stand.

- 331. Local Clauses. They denote the place and direction of the action of the main clause. They begin with we, wehin, weher, and the main clause may contain a corresponding ba, rahin, raher, hier.
- Ex.: Wo Menschenkunft nicht zureicht, hat ber himmel oft geraten (Sch.). Die Welt ift volltommen überall, wo ber Mensch nicht hintommt mit seiner Qual (id.). Denn eben wo Begriffe sehlen, ba stellt ein Wort zur rechten Zeit sich ein (F. 1995-6). Bein Wasser ist zu haben, wohin man sich auch wende.
- a. The demonstratives ba, babin, baber in the local clause are now archaic. Do not confound the relative clauses and indirect questions with the local clauses which generally refer to an adverb.

The potential subjunctive may stand in them.

Clauses of Manner and Cause.

- 332. Modal clauses express an accompanying circumstance and are therefore related to contemporaneous clauses. Conjunctions: intem, tag nicht, ohne tag, without, intem nicht, statt or austatt tag, instead of. Ex.: Der Nitter ging sert, intem er aus ten Wegner einen verächtlichen Blid wars. Ich bin nie in London, tag ich nicht das Museum besuchte (subj.).
- 1. They may have the potential subjunctive. But these clauses occur more frequently in the form of participial and infinitive clauses with

"ohne zu," "anflatt zu": Al-Baff, anflatt zu empfangen, mußte zahlen. Er ritt fort obne fich umzwieben.

- 333. Comparative clauses denote manner, degree, and measure. Conjunctions: wir, als, "as," "than" with the corresponding [v, alfv, even[v] (= so) in the main clause. After the comparative als, tenn, werer, "than." Other forms: gleidwir [v;]v wir [v; just as as, so. Wir denotes rather manner and quality, als the degree and quantity. When both clauses have the same predicate, contraction is common. Then wir denotes likeness, als identity.
- Ex.: 3ch finge wie der Bogel singt (G.). Danket Gott so warm als ich für diesen Trunt ench danke (id.). Wie du mir ("thust" understood), so ich dir (Prov.). Du bist mir nichts mehr als sein Sohn (Sch.). Der träge Gang des Urieges hat dem König ebensoviel Schaden gethan als er den Nebellen Verteil brachte (id.). Hatte sich vin Räntlein angemäst't als wie der Dotter Lutber (F. 2129–30) (als wie is colloquial). "Wie ein Ritter," "like a knight"; "als (ein) Ritter," "as a knight." Sein Glück war größer als man berechnet hatte (Sch.). Eines Hauptes (by one head) länger denn alles Velt (B.). Weder is very rare.
- 1. Specially to be noticed are the clauses with als et, alswenn, generally followed by the potential or unreal subjunctive. For wenn + dependent order occurs also the inverted without wenn. Ex.: 3br cilet ja, als wenn ihr Kügel hättet (Le.). Suche die Biffenschaft, als würdest ewig du hier sein; Tugend, als hielte der Ted dich schon am sträubenden Haar (He.). But the indicative is possible: Und es waste und siedet und brauset und zisch wie wenn Wasser mit Feuer sich mengt (Sch.).
- 2. Dem is preferable after a comparative when several "als" occur. Wie is colloquial. Es fragt fid et leffing größer als Dichter tem als Menich gewesen sei. Nicht in the clause after als is no longer good usage, though common in the 17th and 18th centuries. Lessing has it very frequently. Ich tebte se eingezogen, als ich in Meisen nicht geseht hatte (Le.).
- a. Wichts weniger als means "anything but," literally "nothing less than that," generally felt by English speakers as meaning "nothing but," e. g., Aber ich barf fagen, daß biefe Ginrichtung ber kabel nichts weniger als wehvendig ift, i. e., that this arrangement of the plot is anything but necessary (Le.). In "nichts als" = "nothing but," as after all negative pronouns, "niemant als bu" = nobody but you, als has exclusive force, "but."
- 3. Other correlatives are so ciner wie; ber namtiche wie; berjelbe wie; sold-, so + positive adjective wie (quality) and als (degree); after

zu, allzu + positive and after ein anderer stand als + daß or wenn, als and infinitive, e. g., Er denkt zu edel, als daß er so etwas von uns erwarten könnte. Er ist der nämliche wie er immer war. Eure Berköhnung war ein wenig zu schnell, als daß sie dauerhast hätte sein sollen (G.).

Notice the potential subjunctive after note bas."

- **334.** Under this head comes really the proportional clause, which expresses the proportion of the decrease or increase of what is asserted in the main clause. The conjunctions are the following correlatives: je—tejte, um je (or um tejte, rarely); je—je, = the—the; je nadrem (or nadrem or wie, rarely), according as. If the main clause stand first, its correlative is dispensable.
- Ex.: 3e mehr ber Borrat schmols, besto schrofticher wuchs ber Sunger (Sch.). 3e langer, je lieber (Prov.). 3e mehr er hat, je mehr er will. (3e) nachdem einer ringt, nachdem ihm gefingt (4.), "The success depends upon the effort."
- 1. $\Re = \text{ever}$; $\Re \Re = \text{ever}$; $\Re \Re \Re = \text{ever}$; $\Re = \text{ever}$
- 335. Consecutive clauses express the result or effect of the predicate of the main clause. Conjunctions: tağ (joraß), that; in the main clause, if any correlative, is, is self, tergestalt, terart, jeld. Ex.: So verabscheut ist the Tyrannet', taß sie fein Wertzeug sintet (Sch.). Er schlug, daß laut ter Wald erslang und alles Eisen in Stüden sprang (Uh.).
- 1 The result may also be expressed in the form of a main clause or of an infinitive clause: Dody übernähml ich gern noch ei'nmal alle Plage, so lieb war mir das Kind (F. 3123-4). Ich bin zu alt, um nur zu spielen, zu jung um ehne Bunsch zu sein (F. 1546-7).
- 2. Mark the potential and unreal subjunctives of the preterit and pluperfect which may stand in these clauses: Vermeint Ihr mich se jung und idwach, daß ich mit Riesen stritte? (Uh.). Das Pserd war so lahm, daß wir schneller u Tuß heim gesommen wären.
- 336. Restrictive clauses limit the value and scope of the statement of the predicate and border closely upon the conditional and comparative clauses. Conjunctions: nur raß, only

144

(that), anger daß, except that, in so sern (als), wosern, in wie sern, in so or in wie weit, in as far as, in as much as. The negative force is given also by the subjunctive and the normal order with the adverb tenn or by es set tenn, es ware benn, daß, which is now more common.

Ex.: Wir waren gar nicht so übel bran, nur baß wir nichts zu trinken hatten, Wo were not at all so badly off, only . . . In so sern nun diese Wesen Körper sind, schildert die Vessie auch Körper (Le.). Er entsernte sich niemals weit, er sagt' es ihr denn (II. and D., IV. 42–3). Ich sasse sich nicht, du segnest mich denn (unless thou bless me) (B.). Ruhig (gedenke ich mich zu verhalten); es sei denn, daß (unless) er sich an meiner Ehre oder meinen Gütern vergreise (Sch.).

- 1. This is a very old construction, quite common in M. H. G. The negative force lies not in benn, but in the lost ne + the potential or concessive subjunctive. Denn < M. H. G. danne, is unessential. Compare M. H. G. den lip wil ich verliesen, si en werde min wip = my life will I lose, (she become not my wife) unless she, etc. Swaz lebete in dem walde ez entrünne danne balde, das was zehant tot, = Was im Walde lebte, das war auf der Stelle tot, es sei denn daß es daß davon lief or gesausen wäre (quoted by Paul). Ne disappeared as early as late M. H. G., particularly after a negative main clause. It is left in nur < ne waere = (cs) wäre nicht daß. See Paul's M. H. G. gram., § 335-40.
- 337. Causal clauses denote the cause, reason, and means. Conjunctions: \$a\$, since, well, because, intem = by + present participle in Eng. Correlatives, if any: \$a'rum, \$a'her, \$e\$, \$teshalb etc. Ta'rum' \$ta\beta\$, \$ta'mit \$ta\beta\$ express rather the instrument. Bell expresses the material cause; \$ta\$ the logical reason; "instem" is a weak causal and borders rather closely upon the contemporaneous "intem." Tenn + normal order expresses a known or admitted reason. It is emphatic. See 321.

Ex.: Das Schlepptau (hawser) zerrift, weil ber Schleppbampfer (tug) zu schnell anzog. Mit bem besten Willen leisten wir so wenig, weil uns taufend Willen freuzen (G.). Zeben andern zu schieden ist besser, ba ich so tlein bin (G.). Dir blüht gewiß bas schönste Glück auf Erben, ba bu so fromm und heilig bist (Sch.). Richelien wußte sich nur badurch zu helsen, daß er ben Feindseligseiten ein schleuniges Ende machte (Sch.).

1. Run, dieweil, alldieweil, maßen, fintemal, and others, are rare and archaic.

- 2. The clauses with ba'burch baß, ba'mit baß border closely upon the substantive clause. Da, says Becker, denotes the real and logical reason, wit the logical only when the kind of reason is not emphasized. Beil stands in a clause that answers the question as to the reason. Barum wurde Ballenstein abactebt? Beil man ibn für einen Berrater hielt.
- 338. Final clauses express intention and object. Conjunctions: Dami't, daß, "in order that." Auf daß, und daß are archaie. In the main clause rarely stand darum, dazu, in ter Absidt, zu dem Zwecke (both followed by taß).

Ex.: Darum eben leift er feinem, bamit er stets zu geben habe (Le.). Dazu ward ibm ber Berstand, baß er im innern herzen spüret, was er erschafft mit seiner hand (Seh.). Ehre Bater und Mutter, auf baß bir's wohl gehe und bu lange lebest auf Erben (B.).

- 1. The reigning mood of this clause is the subjunctive. If the object is represented as reached, the indicative may also stand. Im $\mathfrak y\mathfrak u+\inf$ forms a very common final clause: Man left nicht um $\mathfrak u\mathfrak u$ essen, sendern man ist um $\mathfrak u$ leften.
- 339. Concessive clauses make a concession to the contradiction existing between the main clause and the result expected from it in the dependent clause. They are called also adversative causal clauses. Conjunctions: vbglei'd (vb...gleid), vbgdo'n (vb...fdon), vbwohl (vb...wohl), vb and, vbgwar, wenn and, wenn gleid, vb, all = "although." The main clause may contain te'nnode, bod, nidstreftoweniger, gleidwohl, but iv only if it stands second.

Relative clauses with indefinite relative pronouns and adverbs, wer . . . and (immer, nur), wir . . . and, iv . . . and (nud); inverted clauses and those with the normal order, containing the adverbs iden, gleid, zwar, well, freilid, nuch have also concessive force.

Ex.: 3st es gleich Nacht, so leuchtet unser Recht (Sch.). (Compare Obgleich es Nacht ist, ob es gleich Nacht ist . . .) Was Feuerswut ihm auch geraubt, ein süßer Trost ist ihm geblieben (id.). Mutig sprach er zu Reinesens besten (in favor of R.) to salsch auch dieser bestannt war (G.). Ein Gott ist, ein heiliger Wille lebt, wie auch ber menschliche wante (Sch.). Erfüll' bavon bein herz, so groß es ist (F. 3452).

Man tommt ins Gerebe, wie man sich immer stellt (G.). Dem Bösewicht wird alles schwer, er thue was er will (Hölty). Zwar weiß ich viel, boch möcht' ich alles wissen (F. 601).

- 1. Mark also the form of the imperative and und + inversion: Sei noch so dumm, es gibt boch jemanb(en), der bich für weise halt. Der Mensch ist frei geschaffen, ist frei, und würde er in Ketten geboren (Sch.).
- 2. Mood; if a fact is stated, the indicative; if a supposition, the concessive and unreal subjunctive. See examples above.
- 3. When certain parts of speech are common to both clauses, there may be contraction. Obwohl von hohem Stamm, liebt er bas Bolf (Sch.).
- 340. Conditional clauses express a supposition upon which the statement of the main clause will become a fact. If the supposition is real, the conditional clause has the indicative; if only fancied or merely possible, the potential subjunctive; if it implies that the contrary of the supposition is about to happen or has happened, then it has the unreal subjunctive of the imperfect or the pluperfect. Conjunctions: wenn, if; falls, im Falle tay, in case that; wenn anters, if . . . at all; also weigen, veren (such often difficult to distinguish from a concessive clause); we, iv (rare). The main clause may have ta, tann, in ten Falle, and if it stand second, generally begins with iv.

Ex.: Wenn sich die Bölfer selbst befrein, ba kann die Wohlfahrt nicht gebeihn (Sch.). Wenn du als Mann die Bissenschaft vermehrst, so kann bein Sohn zu höh'rem Biel gekangen (F. 1063). Wer miede nicht, wenn er's umgehen kann, das Unserste (Sch.). So du kampfest ritterlich, freut dein alter Bater sich (Stolberg).

- 1. Other forms of the conditional clause are the inverted order, the imperative, and the normal order with beam + subjunctive (= if . . . not, unless; see 336, 1). Sei im Besse und du wohnst im Recht (Sch.), Possession is nine points of the law. Dem lieden Gotte weich' nicht aus, sind'st du ihn aus dem Weg (Sch.).
- 2. Wofern nicht außer wenn, es sei benn daß, if not, unless, denote an exception to a statement true in general. Der Bolf ist harmlos, außer wenn er Hunger hat. See 336, 1.
- 3. Sometimes the preterit ind, is substituted for the unreal subjunctive in the dependent or in the main clause or in both. Its force is

assurance, certainty. Traf ein Kürbis mein Gesicht, ach, so lebt' ich sicher nicht (Cleim). Mit diesem Pfeil durchschos ich Euch, wenn ich mein liebes Kind getrossen hätte (Sch.). O wärst du wahr gewesen und gerade, nie kam es dahin, alles stünde anders (Sch.).

4. Contracted and abbreviated forms: Entworfen blod ift's ein gemeiner Frevel; vollführt ift's ein unsterblich Unternehmen (Sch.). Wenn nicht, wo nicht, wo möglich are very common. Wir versuchten ihn wo möglich zu beruhigen, wenn nicht ganz zu entfernen.

For the tenses see also 275-280.

WORD-ORDER.

- **341.** We distinguish three principal word-orders according to the position of subject and verb:
 - 1. The normal, viz., subject verb.
 - 2. The inverted, viz., verb subject.
 - 3. The dependent, viz., verb at the end.

(By "verb" we shall understand for the sake of brevity the personal part and by "predicate" the non-personal part of the verb, viz., participle and infinitive.)

- 342. The normal occurs chiefly in main sentences: Ter Wint webt. It is identical with the dependent order if there is only subject and verb in the dependent clause. Die Müble gebt, weil der Wind webt.
- 343. The inverted order occurs both in main and dependent clauses: Geht die Mühle? Weht der Wind, (w) geht die Mühle. It occurs:
 - a. In a question.
 - b. In optative and imperative sentences.
- c. In dependent clauses, mainly conditional and after als + subjunctive, when there is no conjunction like went, ob, etc.
- d. If for any reason, generally a rhetorical one, any other word but the subject, or if a whole clause, head the sentence.
 - e. For impressiveness the verb stands first.

Examples with adjuncts (objects, adverbs, etc.) added:

a. Schreibt ber Freund? Bleibt ber Diener nicht lange aus? Bas schreibt bir ber Freund?

But when the inquiry is as to the subject the normal order stands of course. Wer schreibt einen Brief? Bas ist der langen Rebe kurzer Sinn? (Sch.).

b. Möge nie der Tag erscheinen, wenn des rauhen Krieges horden dieses stille Thal durchtoben (Sch.). For more examples, see 284, 1, 2.

But the inverted order is not required: Die Bahl ber Tropfen, bie er hegt, sei euren Tagen zugelegt! (F. 989-990).

c. Willst en genau erfahren was sich ziemt, so frage nur bei edlen Frauen an (G.). Wird man wo (= irgentwo) gut aufgenommen, muß man nicht gleich wiederkommen (Wolff). (Er) Strich drauf ein Spange, Kett' und Ring', als wären's eben Pfifferling'; danst' nicht weniger und nicht mehr, als ob's ein Korb voll Rüsse wär' (F. 2843-6).

Notice here the inversion after all alone, but dependent order after all ob. See **340**, 1; also F. 1122-25, 1962-3.

But for emphasis and to add vividness, the normal is still possible: Du fitheft fill, or wartet auf; bu firithft ihn an, or firebt an bir hinauf (F. 1168-9). This is more parataxis.

- d. Die Botschaft hör' ich wohl, allein mir sehlt ver Glaube (F. 765). Ernst ist vas Leben, heiter ist vie Kunst (Sch.). Mich hat mein Herz betrogen (id.). Wo aber ein Aas ist, va versammeln sich vie Avler (B.). Deines Weistes hab' ich einen Hauch verspürt (Uh.). See also F. 860-1, 1174-5, 1236. Überse'hen fann Caylus vies Gemälte nicht haben (Le.). Weschrieben steht: "Im Ansang war das Wort" (F. 1224). See also 236. 3.
- 1. The main clause, inserted in any statement or following it, has inversion according to this rule. Das, spricht er, ift sein Ausenhalt, was fördert himmelan (Sch.). Wie seib ihr glüstlich, edler Graf, hub er voll Arglist an (id.). For emphasis the speaker can insert a clause uninverted: Denu, ich weißes, er ist der Güter die er tereinst erbt, wert (H. and D., III. 53).
- 2. The coordinating conjunctions after, allein, beam, namilidy, ofter, funders, and standing generally at the head of the sentence, any advert with the force of an elliptical sentence (war, ja, etc., having generally a comma

after them) call for no inversion. After entweder there is option. Ex.: Aber die Kunst hat in ben neueren Zeiten ungleich weitere Grengen erhalten (Le.). Zwar euer Bart ist fraus, boch hebt ihr nicht die Niegel (F. 671). Fürmahr! ich bin ber einzige Sohn nur (H. and D., IV. 91). Ja, mir hat es ber Geist gesagt (id., IV. 95). Denn die Männer sind hestig (id., IV. 148).

- 3. When the dependent clause precedes, the main clause can for emphasis and very frequently colloquially have the normal order. Ex.: Sätte er die Ursachen dieses allgemeinen Aberglaubens an Shafspere's Schönheiten auch gesucht, er würde sie balb gesunden haben (Le.).
- e. hat die Königin toch nichts voraus vor tem gemeinen Bürgerweibe (Sch.). Stehen wie Felsen toch zwei Männer gegen einander! (H. and D., IV. 229). Generally contains toch.
- 344. The dependent order occurs only in dependent clauses. The clause begins with a relative or interrogative pronoun which may be preceded by a preposition; with a relative or interrog. adverb; or with a subordinating conjunction. Ex.: Wenn identify alleranter ware, modet identify well Diageness sein. Be mehr er bat, je mehr er will (Claudius). So stoly ide bin, muß ich mir selbst gestebn: tergleichen bab ich nie gesehn (G.). Wie solche tiefgeprägte Bilter toch zu Zeiten in uns schlasen können, bis ein Bort, ein Laut sie wedt (Le.). See also F. 2015–18, 2062.
- **345.** The dependent order does not occur in main clauses, but it is not the only order of the dependent clause.
- 1. The verb precedes two infinitives. One may be the past participle of a modal auxiliary. Ex.: Rann ich vergeffen, wie's hätte kommen können? (Sch.). Daß ein Mensch roch einen Menschen verlegen soll machen können! (Le.).
- a. But in this case and in other compound tenses the "verb" (i. e., the personal part) may also stand between the participle and the other auxiliary or the infinitive, c. g., well bet Maufmann bas Saus fell gefauft haben or gefauft fell haben (in poetry). Gefauft haben fell is the common order.
 - 2. The normal order may stand:
 - 1. In dependent clauses containing indirect speech. Er

glaubt, Shaffpere habe Brutus jum helben tes Studes machen wollen (Le.).

- 2. In a second or third dependent clause. See 358.
- 3. In certain clauses with negative force containing an enclitic "rem": es sei rem ras + dependent order. See 336.
- 4. In substantive clauses: Out wrif, id bin nicht jour (Le.). This is mere parataxis without conjunction.
- 346. The auxiliaries baten and join are also frequently dropped in dependent clauses to avoid an accumulation of verbal forms, both in prose and poetry. Lessing, Goethe, and Klopstock, especially the first, drop the auxiliary very freely and skillfully.

Ex.: Wie unbegreiflich ich von ihm beleitigt worten (supply bin here or before beleitigt) unt noch werte (Le.). Möglich, tag ter Bater bie Tyranne'i tes einen Rings nicht länger in seinem hause (supply bat) tulten wollen (id.).

- 347. The dependent order in main clauses is archaic and poetic. Ex.: Siegfried ben Hammer wohl schwingen funnt (dialoct for tennte) (Uh.). Urahne, Großmutter, Mutter und Kind in dumpfer Stude beisammen sind (Schwab).
- 348. 1. The inverted order in the conditional clause and in a main clause for the sake of impressiveness has spring from the order of the question. Compare, for instance: 1. If ter Freunt tren? (question). Quit, to wird er mir beifteben. 3. If ter Freund tren (conditional clause), to wird er mir beifteben. 4. If mir ber Freund bed tren geblieben! (impressive inversion).
- 2. The main clause has inversion when the dependent clause precedes, because it generally begins with an adverb like fc, tann, etc. (%efft tu nicht, fc thuft tu Unredt. Without fc, the inversion really ceases. Hence we say, the normal order may still stand for emphasis. But fc, etc., were so frequent that inversion became the rule. Inversion is therefore limited originally to the question and to the choice of placing the emphatic part of the sentence where it will be most prominent.
- 349. 1. The dependent order was in O. H. G. by no means limited to the dependent clause. Toward the 10th century it begins, to become rarer in the main clause. In early M. H. G. it became limited to the dependent clause, so that now we may justly call it the "dependent-clause order."
- 2. The verb at the end is, no doubt, a great blemish of German style—second only to the separation of the little prefix of separable compound verbs, which may turn up after many intervening parts at the close of the sentence. According to Delbrück, the dependent order—subject, object, verb—was the primitive one, still in force in Latin.

GENERAL RULES FOR THE ORDER OF OTHER PARTS OF THE SENTENCE BESIDES SUBJECT AND VERB.

Position of the Predicate.

350. The predicate, be it an adjective, a substantive, participle, infinitive, or separable prefix of a compound verb or the first element of a loosely compounded verb, stands at the end of a main clause in a simple tense. The adjuncts of the predicate, such as objects, adverbs, stand between verb and predicate.

Ex.: Der Senne muß scheiten, ber Sommer ist bin (Sch.). Ihr sein Meister (id.). Er bat verlor ge Worte nur gesprochen (id.). Kein Schild fing biesen Morbstreich auf (id.). Straflose Frechbeit spricht ben Sitten Hohn (id.). Gestern fant ein Wagner-Conce'rt statt.

In the dependent clause only the verb changes position, subject and predicate remain as in the main clause, and the adjuncts stand between them. For instance: What has night! The werket highest stamples Ende nimmer criticism (Sch.), becomes What nicht, daß ihr dieses Rampses Ende je erblichen werdet.

351. In the compound tense the separable prefix immediately precedes the participle, be it in a main or in a dependent clause. Treißig Zabre baben wir zusammen ausgelebt und ausgehalten (Sch.). Die Cholera will (is about to) überhand nehmen. See 137.

Order of Objects and Cases.

- 352. a. Case of a person before a case of the thing. Aber auch noch bann . . . fuhr ber Raiser fort, ben Ständen ben Frieden zu zeigen (Sch.).
- b. Case of a prououn before a noun. Man bestimmte sie (them) dem allgemeinen Unwillen zum Opier (Sch.).
- c. The dative stands before the accusative; if both are persons, the accusative may stand before the dative. Er fellest hatte dem Tienste dieses hauses seine ersten Feldzüge gewidmet (Sch.).

- d. The accusative-object stands before remoter objects, a genitive or a preposition + case. But see also a. Man möchte sagen, Beltaire habe ein Befühl von ter Bichtigkeit tieser Persönlichkeit gehabt (H. Grimm). Die Schülerin schrieb einen Aussah über ben Winter.
- c. As to pronouns, sich stands generally before es, and both before every other pronoun. The personal pronoun stands before the demonstrative. The personal and sich may stand before the subject, if it be a noun, in the inverted and dependent orders. Er hat sich es angesignet. Arumman (a proper name) nähert sich ihm (Sch.). Wer darf sich so etwas erlanden? Jenem ten Beg zu dem bömischen Throne zu perschließen, ergriss man die Bassen schon unter Matthias (Sch.). Bas ihm die vergrößerte Macht der Stände (estates) an Selbstthätigkeit noch übrig ließ, hielten seine Agnaten (relatives) unter einem schimpslichen Zwang (id.). Hat sich die Flotte ergeben? Haft du es ihm wieder gegeben?
- 1. c also includes the personal pronouns: Wie fount' ich ohne Zeugen mich ihr nahn? (Sch.). The rules a, c, d are by no means strict.
- 353. For the position of the adjective, see the use of the adjective, 194, 212. Notice that what depends upon an adjective, participle, or infinitive precedes these. Tie Engsländer find ibrem Herricherhause ergeben. Jum Schen geboren, zum Schauen bestellt, dem Turme geschworen, zefällt mir die Welt (G.). Wir baten ihn, den Brief auf die Post zu geben. (Shafspere's Werte sind) keine Tugendlehren, in Kapitel zebracht und durch redende Erempel erläutert (Le.).

Position of Adverbs.

354. In general, adverbs stand before the words they qualify. The modal adverbs nicht, etwa, zwar, jchon, wel, etc., and the adverbs of time immer, jchon, jeht, nic, nimmer stand generally immediately before the predicate or in place of it if there is none. Dies Bildniß ist bezaubernd schön (Mozart's Zaubers

- stive) Ein sehr hestiger Husten greist den Kranken stark an. Das schwere Herz wird nicht durch Worte leicht (Sch.). Schon viele Tage seh' ich es schweigend an (id.). Ich habe euch noch nie erkannt (B.). Hast du ihn noch nicht besucht? (Notice the opposite of the English order in "never yet," "not yet.")
- 355. An adverb of time stands before one of place, and both before one of manner. Ex.: Biele Bauern waren gestern nach ber Stadt zu Martte gesahren. Wir sahren morgen per Cisenbahn nach Rudolstadt. Es tangt sich auf biesem glatten Jusboden nicht sehr aut.
- 1. Of several adverbs of time or place the more general precede the more specific. Wir reifen morgen früh um 6 Uhr 59 Minuten ab. Der Poligist fant ben Betruntenen auf ber Fahrstraft im Drecke liegen.
- 2. Adverbs of time precede objects when these are nouns, but pronouns precede all adverbs. Bir feiern balb ben 4ten Juli, ben Tag ber Unabbängigfeiterflärung. Bir hoffen ihn morgen auf bem Bahnhofe zu treffen.
- 356. Only aber, namlich, jedoch, and a few others, can separate subject and verb. Ex.: Der Richter aber sprach (Le.). Tie Rachtigall jedoch singt wunderschön.
- **357.** As to the position of the prepositions, they, with very few exceptions, precede the noun; when they follow the noun has been stated under Prepositions. See, for instance, **303**, 7, 8, **10**.

Position of Clauses.

358. Dependent clauses have, in general, the positions of those parts of speech and of the sentence which they represent, i. c., the substantive clause standing for the subject or object has the position of the subject or the object in the sentence, etc. No special rules are needed for them. When there are several dependent clauses, the last often takes for variety the normal order introduced by unt.

The following examples show well-placed dependent clauses: Rein Raifer fann, was unfer ift, verschenfen (Sch.). Berfiegelt hab' ich's und verbrieft,

Baß er mein guter Engel ift (id.). Die Ehr', die ihm gebürt, geb' ich ihm gern; das Recht das er sich nimmt, verweigr' ich ihm (id.). Als ich jünger war, liebte ich nichts so sehr, als Roma'ne (novols) (C.). Richelieu wußte sich daburch zu helsen, daß er ben Feindseligseiten zwischen beiden ein schleuniges Ende machte (Seh.). Mein guter Geist bewahrte mich davor, die Ratter an den Busen mir zu legen (mir before die Ratter in pross) (id.). Der Mensch begehrt, alles an sich zu reißen (G.). Wenn dann die rollenden Leagen vorbeigesaust sind und man hört sie nur noch in der serne, . . . (sor und man sie . . . hört (Auerbach).

359. The rules given can hardly be abstracted from poetry. Even in prose they will be found frequently infringed. Bhythm, rhyme, and, in prose, emphasis control the order of words and allow of much choice. But stu lents translating into German should adhere to the rules very strictly. It will be noticed that the German word-order coincides very nearly with the old English, and does not differ after all so much from the modern English word-order. The chief points of difference are the dependent order, the position of adverbs of time, which in English stand generally at the end, and the position of the adjuncts of adjectives, participles, and infinitives, which precede the latter instead of following them as in English.

 The word-order required by certain conjunctions has been frequently mentioned in the General Syntax. See, for instance, 320.

SECOND PART.

ADVANCED GRAMMAR.

CONTAINING PHONOLOGY, HISTORICAL COMMENTARY ON THE ACCIDENCE, HISTORY OF THE LANGUAGE, AND WORD-FORMATION.

A. PHONOLOGY.

Historical Notes on the Orthography.

- 360. The letters used in Germany are the strongly modified Latin (Roman), called "Gothic," in vogue all over Europe during the later Middle Ages, when printing was invented. Germany is the only nation of the first rank which retains them, and for this reason they may be justly called "German" now. In Denmark, Sweden and Norway they are also still in use to a certain extent. Italy, France, England and Holland abandoned the ugly "Gothic" alphabet very early and returned to the Roman. The German people and the more conservative among the scholars make the retention of the "German" letters a matter of patriotism.
- 1. An edition of Schiller in Latin type ruined a Leipzig publisher twenty years ago. Yet in the 18th century much literature was printed in Latin type. It is an interesting fact, stated by a correspondent of the "Evening Post," of New York, that the first German book published in America was printed in Latin type by Benjamin Franklin. It was a sectarian hymn-book, "Harfe Zions."
- 2. Nearly all German scientific books are printed in L. type to-day, because all scholars and civilized nations that would read such books are accustomed to this type. Grimm advocated it strongly and had all his books printed in it. Koberstein's Literaturgeschichte: Bauer's, Krause's, and Wilmanus' grammars are printed in it. That G. type was not banished from the schools by the new "Rules" is due to the personal prejudice of the Chancellor of the German Empire, who, not long ago, when a publisher sent to him a book in Latin type, returned it, because it was more troublesome for him to read than German type.
- 3. German children therefore still continue to learn to read eight alphabets and to write in four, viz., capital and small Latin script, and capital and small German script. In the Swiss schools German type and script have just been given up. The Latin type and script seem bound to prevail in Germany before very long.
- 361. The German alphabet represents the sounds of the language more adequately than the English does the English sounds, but that is not saying much. In no living language do the signs keep step with the sounds; they are always behind, nowhere more so than in English. But

in German also are several signs for the same sound and one sign may have to stand for several sounds. For instance, the in "adh" and "ith," in fünf, fand, fand, denote different sounds; to, f, ff, ff stand for the same sound; also à (short) and to. The long vowel is indicated by doubling in Saal, Bott, Bett; by h in Bahl, Botl, Both, and not at all in Buth, Fuff, but. And yet, while German spells more phonetically than English, its standard of spelling is as uncertain as the English, if not more so.

- 1. In 1876 an orthographical conference was called at Berlin, which was to discuss certain modifications and propositions aiming at uniformity, laid before them by R. von Ranmer. They met and agreed upon certain rules, which proved, however, unacceptable both to the government and the public.
- 2. In 1879 and 1880 the various governments in Germany took the matter in hand and prescribed the spelling to be followed in their schools. Thus we have Prussian, Bayarian, Saxon, Austrian rules, but they vary very little. The kingdom of Würtemberg alone, with true Suabian tenacity, still clings to the old spellings. Some seven millions of children, therefore, now have to learn spelling according to these official All new school-books must be spelt according to them, fluential journals and periodicals have taken up the matter, excellent new edition of the classics now appearing in Cotta's "Bibliothek der Weltliteratur" is spelt accordingly. While these "Rules" leave much to be wished for, yet no one can deny that some of them are a great step in advance. They change the spelling about as much as the five rules for modified spellings of the American Spelling Reform Association would change English spelling. This grammar is spelt according to the rules. We shall not give them, since they can be so easily obtained. For title of the speller, see 37.

A few explanatory remarks are given on certain points.

362. Umlaut signs.

Of the numerous signs in M. H. G. only two are left, viz., c after and "over the vowel; c is to be discarded now entirely even with capitals, after which it was generally put. Umlaut of ă was always c, not to be confounded with \ddot{c} , which is old c. In N. H. G. ā has been put for c in words whose connection with words containing a was transparent. Batcr, pl. Bătcr, but Better; alt, âlter, but Eltern; Mann, Männer, but Menfch.

1. Dictionaries and encyclopedias often put δ , $\tilde{\mathbb{N}}$ after ab, \mathbb{N} b, which is very annoying. Unfortunately none of the unlants have a fixed place in the alphabet. They stand generally mixed up with a, c, u.

2. \bar{a} was at, \hat{a} , or in M. H. G. \bar{b} was rarely marked; \bar{b} was ot, α , \bar{b} ; \bar{u} , also frequently not marked, was \hat{u} , ut, \bar{u} , \bar{u} . The stroke over ω is the remnant of v over u, which stood for the diphthong uv. This became \bar{u} in N. H. G. (see 488, 4), hence the stroke.

363. On the marks to show length.

- 1. M. H. G. it > i, but the sign it of the old diphthong remained and was put also where i was lengthened as in kil > Sticl, spil > Spicl.
- 2. \$\Delta\$ was used as a sign of length for several reasons. 1. It became silent as in \$\chi_0\$th, \$\Sigma_0\$måfer, feben, \$\chi_0\$chien. It stands frequently now, where an old j or w was dropped, as in blühen, \$\Rangle_0\$th, broken, \$\Rangle_0\$th, \$\Sigma_0\$th, \$\Sigma_0\$th it is not pronounced. The preceding vowel was long originally, or became long according to the general vowel-lengthening. See \$488,2-2. O.H.G. th (: Eng. th) passed into d. This sign after the sound had changed appears still in the M. G. of the 12th and in the succeeding centuries, and stands not only for \$\Delta\$ but also for \$t\$.
- 3. Since the 15th century many MSS, have regularly th for t, and this the was used indiscriminately whether the vowel after or before it was long or short, when printing was invented. In the 16th and 17th centuries the was very frequent. Whether the breath-glide (aspiration) after the was then pronounced, and if so, whether it was appreciated and expressed by the interval of the end of the end
- 4. The doubling of vowels is the oldest method to show length. II, is and the unlauts are never doubled.

364. The use of initial capitals.

This is a self-imposed task of great difficulty and "Stepferbrechen." In the MSS, capitals were only used for the beginning of a paragraph, sometimes of each line; so also in the early printed books, in which the capitals were added by hand. In 1529 Kolross prescribed capitals for the beginning of every sentence, for proper names, for "Gett" and "Serr"

(Lord), as he says "Gett au crea and reverents." Soon capitals spread over appellatives, then over neuter nouns, and then over the abstract. In the 17th century every noun and any part of speech that could possibly be construed as such got a capital. English can boast of some superfluous capitals in the names of the months, days of the week, points of the compass, adjectives derived from proper nouns, but German carries off the palm among the languages of civilized nations. The official spelling reduces capitals considerably.

365. The spelling of foreign words is in a hopeless muddle. There is no system and no rule. All that can be said is that there is a preference of one spelling over the other. The official spelling leaves much liberty.

ANALYSIS AND DESCRIPTION OF GERMAN SOUNDS.

366. In Part I, we have treated of the alphabet and the pronunciation of the letters in the traditional way. But this way is quite unscientific and is barely sufficient to start the student in reading. To describe the sounds of a language, however, is not an easy matter. If the instructor were acquainted with the Bell-Sweet system as presented in Sweet's "Handbook of Phonetics," Oxford, 1877 and in Sweet's "Sound-Notation," the matter would be comparatively easy and might be disposed of within small space. The system analyzes the vowels as well as the consonants according to the position of the organs, for nothing is more delusive than to "catch" vowels by the sound alone as is generally done. Sweet's Hdbk, gives specimens of German, French, English, Dutch, Danish, Icelandic, and Swedish, transcribed in Latin type, and if the student have a little perseverance, these transcriptions will be a great help to him in learning to pronounce any of the above languages.

The system uses none of those big Latin terms, which hide a multitude of inaccuracies and which are so much affected by philologians.

The Vowels.

- 367. 1. The most tangible quality of vowels is "roundness," produced by the rounding of the mouth-cavity in that region where the vowel is made. Pronounce it of Birnt, round it and you have it of Birnt. Pronounce a of Bette, and round it and you have it of Birt. Pronounce a of Falter, round it and you have of Falter. In v is very little lip-rounding (labialization), but mostly check or inner rounding.
- 2. The second, but less palpable quality, of vowels is "narrowness." Its opposite is "wideness." A vowel is "narrow"

by the convexity of the tongue caused by a certain tenseness in it. It is "wide" when the tongue lies flat and relaxed. This is the difference between $\bar{\imath}$ of Birm and $\check{\imath}$ of bin, between long $\check{\imath}$ of Mühle and short $\check{\imath}$ of Mühler, between $\bar{\imath}$ of Sohle and $\check{\imath}$ of foll, between the Eng. vowels of "mare" and "man," "sought" and "sot."

3. The third important element in producing vowels is the position of the tongue. Two positions should be distinguished, the vertical (height) and horizontal (forwardness or retraction). In each we distinguish three grades, viz., "high," "mid," and "low"; "back," "mixed," and "front." In the vowels of "liegt," "liegt," "liegt," "liegt," "liegt," and "such" the tongue is "high" and "front"; in the vowels of "lied" and "liedt" the tongue is "high" but "back." The table on next page shows the relation of the German vowels to each other and also to the English vowels.

Key-words for Vowels.

We give below some more key-words, some hints as to acquiring the sounds and some of the dialect-variations in pronunciation.

HIGH VOWELS.

- 368. 1. u (high-back-narrow round) is only long. Ex.: but, Tuch, Ruce, Uhu. Short it is rare in S. G. Mutter, Hutter. Since $\bar{u} < uo$, the second element still appears in S. G. as ch (in (Bace), but this pronunciation is not classical. See Hart's Goethe's prose, p. 40. Identical with Eng. oo in too, boot. Its length is either unmarked or indicated by b, c. g., Tuch, buhn, thum. It is never doubled.
- 2. u (high-back-wide-round) is identical with Eng. u in "full," but for a stronger labilization in G. Ex.: Mutter, Sunger, Spruch. It is always short. The \ddot{u} pronounced by the extreme N. G. is rather like Eng. u.

TABLE OF ENGLISH AND GERMAN VOWELS.

	NARROW.			WIDE.	
high-back	high-mixed	i high-front Biene E. bean	high-back	high-mixed	i high-front bitten E. bid
g mid-back E. but	eh mid-mixed Gabe	e mid-front Erefe E. sale	a (*) mid-back Bater E. father	ch mid-mixed E. eye (ch[ih])	e mid-front Meníc E. men
low-back	æh low-mixed E. err, bird	æ low-front E. air	a low-back Sc. father	æh low-mixed E. how (æh[oh])	e, lowered mid-front Afre æ low-front E. man
Z	NARROW-ROUND	Ď.		WIDE-ROUND.	
u high-back gut E. woo	high-mixed	y high-front Müßte N. G.	u high-back nuğ E. pull	high-mixed	y high-front Wüller N. G.
O mid-back fo E. so	mid-mixed	s mid-front string S.G. Goethe	o mid-back Some N. G.	oh mid-mixed Fr. homme	ə mid-front fábin Götter } N. G.
o low-back E. water	low-mixed	æ low-front Fr. peur	o low-back E. not	low-mixed	low-front

- 3. **y** (high-front-narrow round). This differs from u by having the tongue-position of $\tilde{\imath}$, that is, it is high-front, instead of high-back. Ex.: hüten, grüßen, Hüße. Long all over Germany, but diphthongal in S. G. "Güte" = "Gütet," which, like ue for $\tilde{\mathfrak{u}}$, is not classical, though old. M. and S. G. rounding of $\tilde{\mathfrak{u}}$ is not so emphatic as N. G., so that $\tilde{\mathfrak{u}}$ sounds more like $\tilde{\mathfrak{l}}$. Its length is sometimes shown by \mathfrak{h} , oftener unmarked. Ex.: Müble, Stüle, hüte, Tücker.
- 4. y (high-front-wide-round). This is N. G. short ü in Sütte, Hüffe, etc. S. G. short ü is only slightly rounded and rather the short of their long narrow ü, and therefore itself narrow. Extreme N. G. ü (in Bremen, Holstein, etc.) is rather "mixed" than front. The first ü (N. G., Hanover) is classical.

In the alphabet the ü-umlauts are represented by ü, üh, and y, as in Fine (short), Pfühl (long), Myrte, Ly'rif.

- **369.** 1. i (high-front-narrow). The same all over Germany. Ex.: Sieg, mir, vier, sieh. Before final l and r it is slightly diphthongal, showing a "vanish" or "glide" before the consonant. Siel, vier are not fil, fir, but, marking the voice-glide by $_{\Lambda}$, $\mathrm{fi}_{\Lambda}\mathrm{l}$, $\mathrm{fi}_{\Lambda}\mathrm{r}$. (See Sweet's Hdbk., p. 133.) Always long. It is represented by i, ih, ieh, but generally ie. Ex.: Mir, the, Sier, stieht.
- 2. i (high-front-wide). Peculiar to Hanover and M. G., as in bin, Wind, Rind. The strict Low Germans of Holstein, Hamburg, Bremen lower this i toward c as in Eng., making it o', so that their Rind sounds much like kent. In S. G. neither i occurs. For it the medium long narrow i is substituted. Hence a S. G. pronunciation of Eng. little sounds like "leetle," while a N. G. has no difficulty with it. The wide i of Hanover and M. Germany may be considered classical. Always short. It is represented by i; by it in viergely, viergig, generally also in vielleight.

MID VOWELS.

- **370.** 1. **o** (mid-back-narrow-round). The regular German $\bar{0}$ of Sohn, Thron, Hof. $\check{0}$ is S. G., as in boffen, Loch, roch. $\bar{0}$ is represented by v, vh, vv. Ex.: Mond, wohnen, Boot.
- 2. o (mid-back-wide-round). \check{o} of M. and N. G., where S. G. has the narrow \check{o} . Ex.: Sound, tell, Stod. This and \check{v} are perhaps the most difficult vowels for Eng. speakers. Do not lower \check{o} to low-back, making it like Eng. o of stock, not. Eng. o is equally hard for N. G., as they too feel that the effect upon the ear is much the same, and they do not readily appreciate the difference in articulation.

The c-umbant has very different shades in different parts of the country. The S. G. ö, whether long or short, is narrow (more "close"). The N. G. is wide (more "open").

- 3. 3 (mid-front-narrow round) is both long and short in S. G. Long ö in töse, sösen, Goethe; short ö in Löcher, Köcher, Stöcke, S. G. ö is identical with Fr. eu in feu.
- 4. » (mid-front-wide-round) is long and short in N. G. Long ö in schön, Möve, Löwe; short ö in Götter, Spötter, Störde. Do not confound ö with the vowels of Eng. bust, bird. The v-umlants are represented by ö and öh; by en in French words: Couleu'r.

Popularly speaking, S. G. ō is closer than N. G. ō. To acquire the sound it is best to start with ē as in "beete" and contract the mouth corners, in which the rounding mainly consists in this vowel, and "bōte" will have to result. In ā the rounding is mainly in the lips (labialization).

In Berlin and M. G. there is a provincial pronunciation of è which sounds very much like 5. It is caused by imperfect rounding and is by no means to be imitated.

371. 1. e (mid-front narrow) is easily produced. But guard against diphthongizing and widening it as in Eng. may, paid, pate. Ex.: Beet, web, Thee, Reb. Pure Fr. and G. narrow e sounds as if it were cut off short, and so it really is compared with Eng. et in say. Signs are ch, et. Always long.

- 2. e (mid-front wide) is the common short e in Eng. and G. Ex.: Mensch, wenn, Bett(cl).
- \tilde{e} (e_1) is slightly lowered toward the Eng. vowels of man, mare; for instance, Käfe, Ähre, märe. Complete lowering to the Eng. vowel is provincial. Signs, c, ä, äh: menden, Sände, Mähr. Distinguish therefore: Ehre—Ähre; Meer—Mähr.
- 3. **eh** (mid-mixed-narrow) is unaccented e and distinct from "long" and "short" e. It is more closely related to the Eng. "neutral" vowels of "cut" and "cur" than to any German vowel. Ex.: trage, glaute, Getränf, gewettet.
- 4. a (mid-back-wide). This has various sounds. In the eity of Hanover \bar{a} is almost fully lowered to low-back. It sounds affected. The average G. a is almost identical with the a of Eng. father, only the latter, as I have frequently heard it, has the slightest trace of rounding.

The Austrian long \tilde{a} has a very "deep" hollow sound. It is distinctly rounded and lowered, and is either low-mixed or low-front-wide-round. Signs, a, aa, ab: Tage, Saal, Wahl.

DIPHTHONGS.

- **372.** There are three of these, in which both elements are short and by no means the same throughout Germany.
- 1. The first is represented by ci and at in the alphabet. The value of the signs is the same in N. G. and is $\check{a}c'$. Its first element is not fully retracted and is exactly identical with the first element of Eng. "long" *i*. In S. G. the second element is clearly raised and even narrowed $\bar{\imath}$, and is better represented by ai. The first element of S. G. at is clearly mid-back. (See Sweet's Hdbk., p. 133.)
- 2. The second diphthong, spelt au, is composed of a and o (short wide o) = ao, certainly in S. G. In N. G. the second element is, in my opinion, mid-mixed narrow-round, *i.e.*, the e of Gabe rounded.

- 3. The third diphthong, spelt cu, au, rarely vi, is oe' (e' = e raised towards i) in N. G. and oi in S. G., e. g., Freute, Gelaute. The former is classical. Any approach of cu towards ci is provincial and not elegant.
- 373. General Remarks on the Vowels. There are thirteen vowels, counting either N. G. or S. G. ö and not counting a lowered mid-front. There are no "low" vowels in G. at all as in Eng. naught, not, snare, err, bag. All Eng. long vowels tend toward diphthongization, as in say, so, saw. The German vowels are pure single sounds and seem to an Eng. ear cut off short, ≥cc, jo. Fr. and G. vowels are alike in this respect. They are strictly narrow. While German has no low-backround vowels (saw, sot), the front-rounding is very emphatic, and the back-vowels are very fully back, yielding a full sonorous tone. See Sweet, p. 132.

The Consonants.

OPEN CONSONANTS.

374. 1. H (throat-open-surd) is the same in Eng. and G. It has always the articulation of the following vowel, and might be called therefore a surd vowel. Ex.: hat, but, hier, tords.

Sign: h. A h not initial is always silent, e. g., gehen, geht, thun, Rathe'ber.

2. **R** (throat-open-sonant) is strongly "guttural," and the provincial N. G. pronunciation of r, rh, e. g., in Regen, Reger, Bär, Furche.

For the regular, classical r (divided) see 377.

- **375.** 1. **kh** (back-open-surd) is the surd guttural spirant after back vowels, viz., \tilde{a} , \tilde{u} , \tilde{u} , \tilde{v} , \tilde{o} , \tilde{o} .
- Sign: \$\phi\$. Ex.: Led, Madt, waden, Dud, Daud. This is the Sc. ch, as in lock. After a, finally and before a consonant, it is more easily acquired than after u and before a front vowel. In S. (4. dialect this is the only \$\phi\$-sound, the front \$\phi\$ being unknown there.

TABLE OF GERMAN AND ENGLISH CONSONANTS

Nasal	Shut (Mutes, Ex- plosive)	Divided	Open (Spirants)		
	l		ğunğ H	Surd.	Throat.

		-	wh E. which	Surd.	Lip
			w E. h water	Sonant.	Lip-back.
	1		funk	Surd.	Li ho
		1	ENE A	Sonant.	Lip-teeth.

"Front" means the front or middle of the tongue and the roof of the month (pala;al). "Point" means the point of the tongue and the 376. In explanation of some of the terms it may be necessary to state the following. See Sweet, p. 31-35. Throat and Back are included in "guttural," but are formed by the root of the tongue and the soft palate. Front, point, blade, back refer to the tongue. the current of air is stopped in the middle of the passage and allowed to escape on the sides. Surdness (voicelessness) and sonancy upper gums or teeth (alveolar, dental). "Point-teeth" means interdental. "Blade" is very forward "front." "Divided" means that passage. Nasal means closed mouth passage, but open nasal passage. It is a mere diacritic atter k, g. etc somants or stops are so called from the entire closure of the passage. θ_{peh} means no contact or closure, all most a narrowing of the (= voice, produced by the vibration of the vocal cords) apply to every consonant, though the liquids are not surd in German. Shut con-

- 2. jh (front-open-surd) is sometimes called the "palatal-guttural." It stands after the front (palatal) vowels (i. e., after all vowels except a, v, u), including the diphthongs, at it, it au, and always in the suffix —den. Ex.: 3d, cud, Büder, mödte, feidet.
- 3. The sonants corresponding to kh and jh are gh and j; gh stands after back vowels, j after front vowels and initially. Ex.: Rege, Ruge; Riege, Riege, lügen, je, jagen, böge. But gh for g (back-shut-sonant) in this position, though very common, is not classical.
 - 4. In the alphabet these four sounds are represented as follows:

kh by d after back vowels, as above; by final g in N. G. after back vowels, not counting consonant suffixes, c. g., Tag, Bug, logft, wagt, Bagb. See dis, 383.

jh by diafter front vowels and consonants; always in —den no matter what precede. Ex.: Lidt, Furde, Stord, Mädden, Mamaden, leudten, eud, Mold, Mild. See do. 383. Also by a final or at the end of a syllable in N. G. after front vowels and consonants, not counting consonant suffixes. Essay, light, light, seguen, leght. Also by initial d in foreign words before front vowels, e. g., Chemi'c, Che'rub, Chiru'rg. See also 383. Do not consonant this sound with H + j (= y) in Eng. huge, hue.

gh by medial g after back vowels, e.g., Lage, Begen. See sub 3.

j by medial g after front vowels, liegen, gauge, guit'ger. But this sound of g is provincial even in N. G. and the "hard" one (= shut, stop) is preferable.

Regularly by j initial. In N. G. a strong friction (buzz) is heard as in Eng. ye, yew. Ex.: $\Im iger$, jung. S. G. j is a mere i, je : : ie, jung = iung. The latter is, no doubt, the better pronunciation. I have heard even a regular Eng. j (= dzh) in Bremen.

- 5. Sweet, I believe, was the first to notice a slight labial element after ϕ when preceded by u and au, indicated by w. Hence $au\phi = aokhw$. See 378.
- 377. r (point-open-sonant) is the classical r of M. and S. G. Eng. r is rather "blade" (dorsal) than "point."

Popularly speaking, Eng. r is "rolled," G. r is trilled. The effect upon the ear is very different in the two r's, though their articulation is not so dissimilar. See Sweet, § 109 and p. 134.

- 378. s, z, sh, zh (blade and blade-point) form a group of "sibilants" closely related to each other and to Eng. th, dh (point-teeth). They are very much alike in Eng. and G., and no description is needed to acquire the German. (For the different varieties see Sievers' Phonetik, § 15, 2, and Sweet's Hdbk., p. 39.) The N. G. sounds are more forward than the S. G. and Eng. Eng. th is farthest forward (point-teeth), then s, and then sh, on the palate. In th the current of air passes over the "point" (tip of the tongue), in s over the "blade" which is back of the point, and in sh over blade and point, presenting more tongue-surface. In the G. sounds a slight labialization is noticeable, marked by Sweet shw. It consists in a slight contraction of the mouth corners.
- 1. **s** (blade-surd) is represented by various letters of the alphabet (except in N. G.), viz., by f, ø, ß, ff. Ex.: joll, Haus, Fluß, Waffer.
- 2. **z** (blade-sonant) by medial and initial \mathfrak{f} , peculiar to N. G., as in team, rafen. Initial \mathfrak{f} begins surd, marked by Sweet s_h , as in $s_h ol$, but ends sonant. The standard is hardly fixed in favor of s or z. See **391**, 4.
- 3. sh (blade-point-surd) by ich and f in the initial st, sh of S. and M. G., as in Schlange, Schinken, waschen, Stadt, Spracke. The first word would be = shwlage. By ch in foreign words, Champa'gner, Chisa'ne. See 375, 4. On st, sh also 389, 4.
- 4. **zh** (blade-point-sonant) occurs only in foreign words; by g in Charge, Gage, Page, Loge, Genedarm. = i in Journal. In invial i = j and frequently i in Journal = dzh, Eng. j. Compare Eng. azure, crosier, glacier.
- 379. **bh** (lip-sonant) is the S. and M. G. w, pronounced with the lips only. Blow to cool which would be surd bh and then intonate the breath (Sweet, p. 41). Do not confound with Eng. w, in which the back of the tongue is raised and

the cheeks are narrowed. S. G. ${\mathfrak w}$ is less consonantal than Eng. ${\mathfrak w}$.

- **380. f** (lip-teeth-surd), **v** (lip-teeth-sonant). The above sounds are "labio-labial." These are labio-dental. The passage is formed by the lower lip and upper teeth.
- 1. f is represented by f, v, as in hafer, faul, Sclave, Frevel, Nerv, Passev, Leviose; by ph in foreign words: Philologic. For pf see 389, 1.
- 2. v is represented by w in N. G., like Eng. and Fr. v but less energetically buzzed. Ex.: Lagen, Löwe, Schwester. After st, however, w is often made labio-labial in N. G., as well as in M. and S. G. The pronunciation of v as th or v between vowels is hardly classical, for instance, Frevel or freehol. By initial v in foreign words, as in Lasa'ng, Lase, Beht'tel, nervo's.
- 381. German I, I, I, I, I differ somewhat from the Eng. The place of contact (on the palate) in the G. sounds is much more forward than in the Eng. and the "point" of the tongue is used in the former while the "blade" is used in the latter. Eng. "well" is the shibboleth of the German speaking Eng., and G. "woll" that of the Englishman speaking German. The difference should be thoroughly appreciated by all who wish to speak "pure" German.
- 1. 1 (point-divided) is represented by I, as in Licht, Fall, well, Falter.

German it is peculiarly hard. Practise upon Belle, Balle, Salle, Bolle. See 376.

SHUT CONSONANTS OR STOPS.

382. Next comes a group of sounds in which there is a complete closure of the mouth-channel. When the closure is opened an explosion takes place, hence their name "explosive." "Stops" is a less pedantic name. When the closure is far back, formed by the root of the tongue and the soft palate, we get the back-stops k, g, called also not so well "gul-

tural" and "palatal." When the closure is forward, formed by the point of the tongue and the teeth, gums, or palate, as the case may be, we have the point-stops t, d, called also "dental" or "lingual," or "alveolar." If the closure is made by the lips, we have the lip-stops or "labrals." The great difference between G. and Eng. stops, particularly the surd ones, lies in the more energetic closure and explosion of the G., amounting almost to an **H** (aspiration).

383. 1. **k** (back-shut-surd) is represented by f, as in Mate, but, Mragen; by th: a, before s (in the same stem); b, in foreign words before back vowels. Ex.: a. Judys, jedys, Budyshaum, wadjen; but wadjam. b. Chara'cter, Chaos, Cholera. But see 375, 4; 378, 3. Also by th, th, with prolonged closure: Bute, gurüffehren. By final g in S. G. and according to the standard pronunciation. See 375, 4; 385, 3; 20.

This g is not strongly exploded, has no aspiration, and is called with final b and b by German phonetists "tonlose media," by the people "hard" b, b. To English speakers it seems absurd to speak of a "surd" or "hard" b. We would call these sounds p, t, k; i, e, surd stops, unaspirated, slightly exploded.

- a. Also by final g preceded by n, but only in N. G., as in lang, jung. See 386, 1.
- 2. g (back-shut sonant) is represented by g initial and when doubled, as in gehen, jagen, ärgern, baggern, Egge. See 375, 4.
- 384. 1. t (point-shut-surd) is represented by t, tt, as in Bette, heute, Taute, Hut; by th, as in That, That, formerly very common finally, as in Muth, Heirath, Heimath which are now spelt without h. Also by t final, as in Tod, geigheid, find, Aleid, Haid Hut. See 385, 3. By it only in Start and its derivatives, but formerly more frequent, as in todt, Brott, geigheidt, Ernte, which are now spelt tet, Brot, etc.
- 2. d (point-shut-sonant) is represented by b initial and medial, as in banken, ter, Boten, Meiter, Witter.

- 385. 1. p (lip-shut-surd) is represented by p, pp (see 382, but Eng. p before vowels is often as strongly aspirated, e. g., pound, par, pat. Ex.: Pulver, Pracht, Haupt, Rappe, Wappen. Also by b final, as in Dieb, gab, lieb, hob, hobst, webst, liebst. See sub 3.
- 2. **b** (lip-shut-sonant) is represented by medial and initial b. For final b see sub 3. Ex.: Böje, Bube, Ebbe, trabbelu.
- 3. Final b, b are therefore pronounced t, p all over Germany, and g as k according to the standard pronunciation, but not in N. G. See 383, 1. For g after n see 383, 1, a.
- 4. Before b, b, g, pronounced as surd stops, the liquids L, n, m are short, and not long as in English. Pronounce wift therefore nearly with the lt of Eng. will, und with the nd of hunt, not of hound, wild.

NASALS.

- 386. The nasals are also "shut" consonants, but they are not stops (with explosion). The air passes through the nose, and we distinguish them according to the place of contact.
- q is the "back-nasal-sonant" common to Eng. and G., as in Eng. bring, G. bringe, singe.
- 1. **q** is represented by n before f, before g in N. G., and by medial ng. Ex.: Trant, Wint, bange, lange, Finger. Final ng is **q** according to the standard, c. g., Wefang, hing. For N. G. final ng see **383**, 1. Also by n of en, in, on, an, ent final in foreign words, as in Tauphin, balancieren, Avancement, Escarron, Bonbon.

This is an unsuccessful attempt of Germans at pronouncing the French nasal vowels, which are not at all identical with \mathbf{q} ; \mathbf{q} does not exist in French. Though incorrect, this sound is given by the educated classes and by the stage.

387. n is the "point-nasal" (half-dental). For Eng. and G. n, see **381.** n is represented by n, n as generally written, except where it becomes either guttural or labial by the proximity of guttural and labial consonants. (See **386**.) Ex.:

jenden, hand, Spinne, Bündel, manche, Tünche, wohnen, Thron, wandten = vantn.

- **388.** m, the lip-nasal, is identical in Eng. and G. It is represented by m, mm: Mund, Stimme, warm; also by en after \mathfrak{b} and \mathfrak{p} , as in pumpen = pumpm, Treppen = trepm.
- 1. In untaught pronunciation not influenced by the letter, n is also pronounced as m before f, as in fauft, fünf, Sauf, Bufunft, Bunft. Overprecise speakers pronounce as two full syllables words like blei-ben, Lumpen, fin-ben, fin-gen, etc., but persons speaking naturally pronounce as stated above.

COMPOUND CONSONANTS.

- **389.** These are composed of single sounds already described, but some of them seem to call for special mention. Their elements are closely joined together without any glide.
- 1. **pf** is composed of p and f, and is always represented by pf, as in Pfirfith, Rampf, Rarpicu, Sumpf. But this pf is not pronounced except by a special effort. The current and "natural" pf is composed of a lip-teeth-stop and f. (This was first noticed by Sievers and Sweet.) The first element being formed by lower lip and teeth instead of by lower and upper lips, as in a real lip-stop. Final pf is in N. G. commonly made into f, but it is not to be imitated.
- 2. **ks** is composed of the surd back-shut and the surd blade-open, as in Eng. Represented by r, as in Urt, Tert, Rire, Mirranter; also by the and the same stem, as in Wath, Other. See **383**, 1.
- 3. ts is composed of the surd t (point-shut) and s the surd blade-open. Represented by 3, as in Zunge, Ziel, Weizen, Warze; by t3, as in Sprüßen, schwißen, Rate; by c in foreign words before front vowels, as in Acce'nt, Civi'l, Recense'nt, Cöliba't, etc.; by t in foreign words before i, as in Patic'nt, Nativ'n, etc.

- 4. G. ts differs from Eng. ts in cats, hats in this respect. in G ts s is long, in Eng. ts t is long. In $\hat{\mu} = sht$ and $\hat{\mu} = shp$ (see 378.3) the first element is also short. In "natural" pronunciation final $\hat{\chi}$ in N G is made into $\hat{\chi}$ after $\hat{\mu}$, rarely after $\hat{\chi}$ and $\hat{\chi}$; so that gain becomes Gain, Somman > Somman. But this is not classical.
- 5. Though there are doubled letters, both vowels and consonants, there are no doubled sounds. Double vowels denote one long vowel, as in Saal, Staat, Meas, and double consonants are long energetic consonants, as in Bette, haffen, Trepfer, gerren, Treffer, Some, alle. But the consonants are not always long and short in G. in the same places where they are so in Eng. See, for instance, 385, 4. Final consonants are short in German. Compare Mann, well, but with Eng. man, well, but The Eng. sonant stops d, g, b are very long and their sonancy is very emphatic. This is not so in German. Compare Compare Compare Compare dagger, etc.

ON A STANDARD OF PRONUNCIATION.

- **390.** While Germans have a common literary language, they have not a common spoken language. German cannot boast of such authorities in pronunciation as French has in Paris, in the French Academy and in the Théatre Français. Provincialism, so strong in German politics and other institutions, is particularly strong in pronunciation. All sections of the country readily acknowledge the "Schriftsprache" as the common language of the country, but in pronouncing the same they claim the utmost liberty.
- 1. One can hear professors of the German language at the universities speaking in the purest dialect pronunciation; so one can, preachers in the churches and representatives in the state-legislatures and in the "Reidstag."
- 2. The great authors of the classical period, Lessing, Goethe, Schiller, Klopstock, etc., pronounced the literary language with strong dialect coloring. One of Lessing's favorite phrases was: "Es femmt both night back berei beraus," which he is said to have pronounced "'s femmt both nightarti 'raus," Goethe was called "Gēte" by them. Compare Goethe's defence of dialect in "Mus mainem Leben" (Hart's Goethe's Prose, p. 19-20).

- 3. To dialect pronunciation are mostly due such bad rhymes as: Lette: Beite; schin; gehn; früh: nic; Söh': Sec; ferne: Behörne; which occur in their poems. Platen, Rückert, and Bodenstedt carefully avoid these rhymes. In families of culture in Cologne you hear dit and dat for bics and bas. In Bremen are still families who take pride in having the children learn the L. G. dialect first.
- 4. In Hanover, both in the city and in the surrounding districts of the province, the pronunciation is generally considered classical, and yet Hanoverian has three strong provincialisms: 1, \mathfrak{f} , \mathfrak{f} , which most Germans pronounce \mathfrak{f} (\mathfrak{f}), \mathfrak
- **391.** The only institution that claims to have a standard and tries to come up to it is the stage. The best theatres of Germany and the better actors, followed by a very small number of the cultured, strive after a dialect-free pronunciation. The standard set up by them decides the disputed points as follows:
 - 1. Initial st, sp are to be pronounced sat, sap. See 24.
- 2. Final g is surd except after n (386, 1), but see the Preface: Berg bere, Berg wee, first liet.
- 3. Pronounce r trilled, not uvular or guttural, as in North Germany and in the larger cities.
- 4. North and Middle Germans pronounce initial f and f between vowels as sonants; the standard is not quite settled, but will probably come to sonant f.
- 5. The rounded vowel should be fully rounded. The extreme N. G. pronounces \mathfrak{u} , \mathfrak{v} , \mathfrak{u} (short) in fragebutte, femm', white too much like Eng. but, come, hut. The extreme S. G. likes to unround $\mathfrak{u} > \mathfrak{i}$, $\mathfrak{v} > \mathfrak{e}$.
- 6. Fag, \mathfrak{Zug} , \mathfrak{Ueg} have long vowels, = tae, zue, wee. See \mathfrak{sub} 2; also **488**, 2, b.
- 7. The lip-teeth w and not the S. G. labio-labial bh has the preference.

- 392. 1. But it is possible to have a dialect-free pronunciation and yet have dialect-accent, i.e., "intonation," "modulation of voice." Very pronounced are, e.g., the "accents" of Berlin, Vienna, Bavaria (München), Saxony, which can be distinguished without much difficulty even in a good pronunciation. The stage favors the North German "accent," particularly the Hanoverian, and this is at bottom what is meant by saying the Hanoverian is the best pronunciation.
- 2. There is another reason, however, why the N. G. pronunciation is "purer," as it is generally called, than S. G. The Low German dialects are farther removed from the classical language than the High German. The contrast is felt more in North Germany than in South Germany. The school and the educated make a stronger effort to acquire the standard pronunciation as far as there is any. The N. G. is more influenced by, and has a higher respect for, the written language. He pronounces according to the letter before him. Compare, for instance, b and b, which the Saxon calls a "soft b" and a "hard b."
- 3. Another reason for the purity of N. G. lies also in the political and intellectual predominance of the Northern half of Germany for nearly two hundred years. The speakers of S. G. dialects are divided between Switzerland, Germany, and Austria. The modern theatre also developed earlier in N. Germany than in S. Germany.
- 4. The Swiss too can speak dialect-free German when conversing with strangers, of whom they of course see a great many. They make then a special effort to drop their dialect, which is nearly as far removed from the written language as is a Low German dialect.
- 5. One thing is surprising, viz., that the excellent G. school-system has not more power to spread a common spoken language. It is true, the school does modify the dialect, but when the child has left school, its language relapses, as a rule, into pure dialect.

SOME PHONETIC LAWS, LIKE ABLAUT, UMLAUT. GRIMM'S AND VERNER'S LAWS, ETC.

ABLAUT.

393. Ablaut is the gradation of vowels, both in stem and suffix, under the influence of accent. The vowels vary within certain series of related yowels called ablaut-series.

The ablant of suffix-vowels, e.g., of case-suffixes, is difficult to determine even for so early a period as O. H. G. or Ags. We shall speak only of the stem-vowel-ablant.

The phenomenon of ablant appears in all the I. E. languages and is characteristic of the Teutonic languages, only in so far as a very large system of verb-inflection has been developed. On the Greek ablant, see Amer. Journ. of Phil. vol. I., No. 3, p. 281—, an article by Bloomfield.

394. Osthoff and Brugman have the credit of establishing as many as four grades or stages of ablaut, viz., hochstufe, strong and weak; tiefstufe, strong and weak, which may be called in Eng. strong, medium, weak, zero. They do not appear in every series. But the second has them all, viz., "au" strong; "eu—iu" medium; "û" weak; "ŭ" zero. The first two stand under the strong accent; the third under the secondary, the last in the unaccented syllable.

Why there should be a difference of vowel under the strong accent is not clear, but the fact of two grades is undeniable.

- 1. For the I. E or Parent-speech-period three series have been reconstructed with tolerable certainty and there are traces of several more. But the exact quality of the vowels can hardly be determined. o of the first I. E. series was probably unrounded, and more a than o, see **459**.
 - 1. e-o, G. T. e, i-a, appears in I. to V.
 - 2. ă-ā, G. T. a-ô, in VI., see 459, 4.
 - 3. ē-ô, O. H. G. ā-uo, in G. tât, That tuon, thun.

We give the Germanic series in Braune's order. (See his Gothic grammar, followed also by Sievers in his Ags. and Paul in his M. H. G. grammar.)

395. * I. Ablaut-series.

Compare Gr. πέποιθα, πείθω, κλίμαξ, πέπιθμεν; οίμος, είμι, ίμεναι, ιμεν. I is the zero stage, because the first element of the diphthong, e—o, has disappeared, while the second, the consonant element of the falling diphthong, has become a vowel.

^{*} The figures I., II., etc., always refer to the ablaut-series: the figures 1, 2, 3, 4 refer to the ablaut stage.

Ex.: 1, lêren, lehren, < laisjan, to teach; lêra, Lehre, + Ags. lâr, Eng. lore; Leisten + last (Kluge); pret. sg. of strong verbs of Cl. I. 2 and 3, pres. of verbs of Cl. I. 4, Lift, lernen, with the words of 1, from the same $\sqrt{l_{xs}}$. x represents the vowel that is to appear according to accent and is an unknown quantity in the root. 1, Leigen, Leigenger; 2 and 3, Leihen; 4, Leigen, verzichten, all from a $\sqrt{d_{xc}}$. Compare L. deere. Notice the Eng. cognates show in 1, a, \bar{o} : ladder, wrote, last, lore, loaf; in 2 and 3: 1, rise, smite; in 4, 1: risen, smitten, list.

396. II. Ablaut-series.

	1	2	3	4
G. T.	au	ëu	û	ŭ
O. H. G.	ou, ô	iu, eo, io	û	ŭ, ŏ
N. H. G.	ŭ, ŭ	ic, cu	au	u, ō, ŏ.

All four grades still apparent in German. "t bears the same relation to εu, au as I to εi, ai. See above. Compare χεΓω, χοΓή, χυμός, χυτός.

Ex.: From the Vixk: 1, Lohe, flame. 2, Light < light, lendyen, + light. 4, Ludye + lynx (1). From a Vklu: 2, Lemmund. 3, lant < hlat + loud; 4, Ludwig, Luther, Gr. $\kappa\lambda\nu\tau\delta\epsilon$, L. inclinus. Again, 2, fied + sick, Sende, and 4, Sudyt. See the strong verbs of Cl. II. < Vb xd': 1, bet pret. of bitten. 2, bitten, Gebiet. 4, Bote, Gebot, Büttel + beadle. Eng. bid represents older beodan II. and biddan V. The corresponding Eng. vowels are very irregular.

397. III. Ablaut-series.

	1	2	8, 4
G. T.	\mathbf{a}	ë, i	u before r, l, m, n
German	a, e (umlaut)	c, i	u, v.

As to 3 and 4, sec 459, 3, a. The roots all end in r, 1, m, n + cons.

Ex.: See the strong verbs of Cl. III. From the root of winden, wanter genunden, + wind: 1, die Band, wenden < *wandjan, + Eng. wend, genundt wandern + wander, etc. 2, die Binde, Bindel. < Germanie Vorg. 1, darg pret. sg. 2, Berg, Gebirge, bergen. 3, 4, Burg, + burgh, borought to burrow. Bürger, Bürge, bergen + borrow(?). Also + bury. Corresponding Eng. vowels in verbs before nasals are i in 2, a in 1, u in 4, e.g., spin. span, spun. In nouns, etc., they are quite irregular, but generally also e or i, a, u, o.

398. IV. Ablaut-series.

	1	2	3, 4
G. T.	a, ê	ë	u
O. H. G.	a, â	ë, i	u, o
N. H. G.	ā	ē, č, ie, i	ū, ŭ, ō, ŏ.

The roots end in a single liquid or masal, or these stand before the vowels. ê, â are not yet explained.

Ex.: Verbs of Cl. IV., stehten, stahl, gestohten. 1, Diebstahl. < Vdxm. 1, sahm, zähmen + tame. 2, gesiemen. 3, 4, Bunst. < Vb\u00edxr. 1, bie Babre, + bier, barrow(?), sich gebahren, bie Gebärde, -bar. 2, gebären + bear, Eimer < cin-her. Buber < zwiber (see Kluge). 3, 4, bie Bürde + burthen, bie Gebürt + birth, bie Gebühr (?), gebührlich. Eng. cognates show generally ea, \u00f3, c. y., bear, bore.

399. V. Ablaut-series.

	1	2, 3, 4
G. T.	a, â	ë
O. H. G.	ă, ā	ë, i
N. H. G.	ā, ă	ē, ĕ, i, te

Only two grades. The roots end in a single consonant, not a liquid or nasal.

Ex.: Verbs of Cl. V. < Germanic Vgxb. 1, gab, Gabe. 2, 3, 4, arten, gegeten, bu girbit, bir and bas Gift. Eng. vowels the same, + give, gave, gift.

400. VI. Ablant-series.

	1	2, 3	4
G. T.	ô	a (o?)	\mathbf{u}
0. H. G.	uo	a, e	\mathbf{u}
N. H. G.	ũ, ũ	a, c (umlaut)	ũ, ŭ

⁴ Not in the past part., only in nouns. A difficult series.

Ex.: Verbs of Cl. VI. < Vpxr. 1, fuhr, führen. 2, 3, fahren, die Fahrt. 4, die Furt + ford. < Vmxl. 1, M. H. G. muol (now mahlte). 2, 3, mahlen, Mehl + meal, malmen, Malter. 4, Mühle + mill, Müller, Mull, Maulwurf + mole, by popular etymology < moltwurf + mould-warp.

TIMEATIT.

- 401. Umlaut is the modification of an accented vowel by an i (j) in the next syllable. See 362.
- 1. By it a, o, u become sounds lying nearer to i. In other words, back and mixed vowels become more like front vowels through the influence of front vowels. The tongne-position of back and mixed vowels changes to "front," while the rest of the articulation remains the same. This "fronting" is called by the Germans "monil lierung," i.e., palatalization. Sievers' theory is that the intervening consonants were first affected and then the immediately preceding vowel. Such palatalized consonants are the Fr. I and a still in "feuille" < follows, Espagne < Hispania.
- 2. To understand umlaut we must go back to a period in which i (j) was still tolerably intact as in O. H. G. But there was only one umlaut marked in that period, viz., that of $\check{\mathbf{a}}$ and its sign was e just like the original e now distinguished by "= $\check{\mathbf{e}}$. In M. H. G. the umlaut of the other vowels appears and is unfortunately very irregularly represented. Sievers supposes that the consonants were already palatalized in O. H. G. and that they imparted their change to the vowel in M. H. G. But it is also very likely that the vowels were already palatalized in O. H. G., only the alphabet was not sufficient to show the change.
- Ex.: lamp-lembir, Lämmer; gabi > gaebe > gaète, pret. sbj.; gast-gasti > geste, Gäfte; *ali-lantjo > eli-lenti > ellende > clent, unfortunate because in an "other country;" scôni > schoene > fixen; angil > Engel; bôsi > bife, etc.
- **402.** The extent of this phenomenon varies with the period and the dialect. Certain consonants have prevented undant. But we cannot enter upon a further discussion. Compare gebuildig, genealig. By undant, then, $a > \tilde{a}$, c; o (*) $> \tilde{a}$ (*); $n > \tilde{a}$ (*); and and, but this only seemingly in cases where au < 0, since 0 passed into 0 in and this into 0, 0, 0 and 0 are coording to 0.
- 1. While in German undant is still a living factor, it is dead in Eng. and has been for some 8-900 years. Eng. only has isolated forms with undant, e.g., mouse—nice, cow—kine, etc., that belong to no system of inflection or derivation in which undant serves as the expression of a function or meaning. We call the above examples "irregular" plurals.
- 2. There is no such thing as "rückumlant" = "umlant reversed," as the old grammarians called it. e.g., in tenten, tachte, getacht. See 454, 3.

Interchanges of Vowels: c — i, ie; no Umlaut — Umlaut; u — o; ic — cu.

403. $\mathfrak{e} - \mathfrak{i}$ (ie). 1, where \mathfrak{e} is original, that is G. T. and I. E. $\ddot{\mathfrak{e}}$. $\ddot{\mathfrak{e}}$ passed into i before i (j) standing in the unaccented syllable, a process exactly analogous to umlaut; $\ddot{\mathfrak{e}} > \mathfrak{i}$

also before a nasal belonging to the same syllable, generally before nasal + cons. The physiological reason for the latter change is not clear.

Ex.: The present of Cl. III., IV., V., see also the O. H. G. paradigm. The first p. sg. nimu may be due to analogy, but in O. II. G. and Ags. $\ddot{v} > i$ also before u and it may therefore be a phonetic transition. figur, liegen, bitten have i all through, see 457. 1. but Selfel < sez_3al . Rele—Wellite < giflldi. redt—richten < *ribtjon, + L. rectus. Reder — Wellichter; fern—firm—firm. Verbs of III. Cl.; finden, fdyminmen. Weben—Wift < gifti.

2, i is original, but passed into ë before a, e, o in the next syllable or if the word ended in a consonant. i remained before i (j) and before w.

The cases of i > c are not numerous. It is a High German and Old Saxon peculiarity. Eng. has still i. This is still called Vredung after Grimm.

Ex.: fcf — crquiden + quick, quicken; leben + live, steben + cleave, stoweren belong to ablauts. I. with the zero grade. Verwesen, to decompose, compare L. virus, Skr. vish-am. Leber + liver. Ved + Eng. pitch < 1. pic-s. Steg < same root as steigen I.; Wedsel — + Lat. vic-cs. er < ir. + Lat. is.

404. Umlaut — no umlaut.

Ex.: Verbs of VI. and VII. Cl., but in the latter mostly by analogy, e.g., faru, ferst, fert — faire, fährl, fährt. Alt — Eltern < eltirôn. Comp. + elders. Abel < adal — ebel < edili. Comp. + Ethel. Very numer ous and the umlaut often more or less hidden.

405. $\mathfrak{u} - \mathfrak{v}$. In the stem-syllable u is always the older and passed into o before a, e, o. It was preserved like i before i (j), w and a nasal belonging to the same syllable.

This process is also one of assimilation similar to umkaut, called "brechung" by the offer grammarians.

Ex.: See verbs of Cl. II., III., IV. in the past part, and compare with them the pret, pl. and nouns from the same stem, e.g., Flucht, Bucht, Bermunft, Bunft. Solite < scolita — Schule; helb — huld; held ; held — huld; held —

406. if (io) — \mathfrak{ru} (iu). in being levelled away and it standing for both io and iu, this interchange is not common now. Both in and io < G. T. ëu. ëu > iu before i (j) and w, but > co before a, e, o; and later eo > io > ie, it. The process is $\ddot{e} > i$ and u > o in the same diphthong.

Ex.; Ablauts, and Cl. II., see 124, Remark. Bas da freucht und fleugt (Sch.). bieten — Beute (?), Beutel (?).

Grimm's Law or the "shifting of mutes," Lautverschiebung.

407. It concerns the so-called "mutes," b, p, f; d, t, th; g, k, ch, media, tenuis, aspirata. This law was discovered by Rask, but first fully stated by Jacob Grimm. It includes two great shiftings, the first prehistoric, that is, General Teutonic or Germanic; the second, historical or German. The first is a peculiarity of the whole group and shared to very nearly the same extent by every member of the group; the second is a peculiarity of the German dialects proper, is partial both as to the number of sounds and of dialects affected. We very briefly represent the first shifting. See the author's article in the Amer. Jour. of Phil., vol. I., for a fuller account. Let y represent the sonant stops, z the surd ones and x the so-called "aspirate," which represents various sounds. The following formulas will be of use. G. is added now merely for illustration.

	Parent-speech.	I. E.	G. T.		G.
I.	x	>	y	>	\mathbf{z}
П.	y	>	Z	>	x
III.	Z	>	x	>	у

Notice I. E. is the oldest stage of the language reconstructed from the various I. E. dialects. You can substitute for I. E. any language 1-at the Teutonic, provided you make allowance for any changes in that particular language, e.g., d' has become for d in Latin. By General Teutonic or Germanic is meant that stage which is reconstructed from all the Teutonic dialects. By G. we mean the written language of Germany; H. G. means South and Middle as opposed to Low German.

Substitute in each formula the labials, dentals, etc.

- **408.** Form. I. 1. $\mathbf{x} = \mathbf{d}'$. I. E. $\mathbf{d}' = \mathbf{d} + \text{sonant aspiration}$ (Ellis), "sonant affricate," this d'through G. T. dh (sonant spirant) $> \mathbf{d} > \mathbf{H}$. G. t, but dh remains in Go. and Scand., e.g., I. E. * d'ur-, Gr. $\theta v q a$, L. fores, > G. T. * dur-, Eng. door > G. Ther Thir, doublets.
- 2. $\mathbf{x} = \mathbf{b}'$. I. E. b' > G. T. bh, b > G. b, e. g., I. E. $\sqrt{\mathbf{b'xd'}}$, ablauts. II., Gr. $\pi\nu\vartheta_-$ > G. T. $\sqrt{\mathbf{bxd}}$, Eng. bid > G. bicton, bet, gebeten. No German shifting of b > p therefore.
- 3. $\mathbf{x} = \mathbf{g}'^{1}$. I. E. $\mathbf{g}'^{1} > \mathbf{G}$. T. \mathbf{gh} , $\mathbf{g} > \mathbf{G}$. \mathbf{g} , e. g., $< \sqrt{\mathbf{g}'^{1}\mathbf{u}}$ (Skr. $\sqrt{\mathbf{h}\mathbf{u}} > \mathbf{G}$. T. $\sqrt{\mathbf{g}\mathbf{u}}$), *gud-, Eng. God $> \mathbf{G}$. Obtt, "the being invoked" (see Kluge). No German shifting of $\mathbf{g} > \mathbf{k}$.
- 4. $\mathbf{x} = \mathbf{g}^{2}$, the second series of gutturals, the "labialized" > G. T. g, gw (w) if medial, > G. g, or zero if medial, e. g., I. E. * ang". L. angustus > G. T. angu-, Go. aggwus > G. enge < angi < * angwjo. I. E. * g" ostis, L. hostis > G. T. ghast, gast, + Eng. guest > G. Gaft.
 - 409. Form. II. x in G., see later.
- 1. $\mathbf{y} = \mathbf{d}$. I. E. $\mathbf{d} > G$. T. t, Eng. t. $\sqrt{\mathrm{dxnt}}$, to eat, I. E. dont, L. dont-s > G. T. tunth-, Eng. tooth > β oun, < zand. Before d the vowel has disappeared by apocope. The form is participial = "the eater" (Kluge). Comp. L. edere > Eng. eat > G. effen.
 - 2. y = b. I. E. b is very rare and examples doubtful.
- 3, $\mathbf{y} = \mathbf{g}^1$, \mathbf{g}^2 . I. E. $\mathbf{g}^1 > G$. T. $\mathbf{k} = G$. \mathbf{k} . $< \sqrt{\mathbf{g}} \mathbf{x} \mathbf{k}$. L. getare > G. T. * kald, Eng. cold, cool + G. talt, tübl, ablants. VI. I. E. $\mathbf{g}^2 > G$. T. kw, $\mathbf{k} = G$. f, an, e. g., $< \sqrt{\mathbf{g}^2} \mathbf{x} \mathbf{m}$, L. venio (< * gvemio) > G. T. quëman, Eng. come, + G. tummen, adj. bequem. The phonetic change of $\mathbf{y} > \mathbf{z}$ consists in the loss of sonancy.
- **410.** Form. III. x = G. T. surd spirant, I. E. z = unaspirated surd stop.

- 1. $\mathbf{z} = \mathbf{I}$. E. t. t through the transition stage $\mathbf{t}' = \mathbf{t} + \mathbf{surd}$ aspiration $> \mathbf{G}$. T. th $> \mathbf{H}$. and L. G. d, e. g., L. tertius $> \mathbf{G}$. T. thridj-, Eng. third, $> \mathbf{tritte}$.
- 2. $\mathbf{z} = \mathbf{p}$. I. E. $\mathbf{p} > \mathbf{G}$. T. f, bilabial, Eng. $\mathbf{f} > \mathbf{G}$. \mathbf{f} : L. pisc-is $\mathbf{g} > \mathbf{G}$. T. fisk-os $\mathbf{g} > \mathbf{G}$ if $\mathbf{g} \in \mathbf{g}$. Fish.
- 3. $\mathbf{z} = \mathbf{k}^1, \mathbf{k}^2$. I. E. $\mathbf{k}^1 > \mathbf{G}$. T. h, $\mathbf{kh}, > \mathbf{G}$. h, d). Ex.: L. pecus $> \mathbf{G}$. T. fëhu, Eng. fee, $> \mathfrak{Bich}$. I. E. $\mathbf{k}^2 > \mathbf{G}$. T. hw, h, Eng. wh, $> \mathbf{G}$. w, zero = silent h. L. sequ-or $> \mathbf{G}$. T. sëhw-an $> \mathfrak{hen}$, + Eng. sec. L. quis, quod $> \mathbf{G}$. T. hwër, hwat + Eng. who, what, $> \mathbf{G}$. wer, was.

Verner's Law.

411. After the first shifting and when the accent was not yet limited to the root-syllable (see 420, 2) a new phenomenon appeared, viz., Verner's Law or the "shifting of spirants." The G. T. surd spirants th, kh, f, s became sonant spirants and later sonant stops, when the immediately preceding vowel was unaccented. This affects only form. III., but the transition of sonant spirants into sonant stops is identical with the transition of the sonant spirants which sprang < sonant affricate according to form. I. See 408. Hence there is an interchange of the following consonants: th — dh, d which became G. t; f — bh, b; kh, khw — gh, ghw, g, w; s — z, r. See 416.

As to accent, see 420. Students who know Greek can generally go by the Greek accent, which is often still the L.E.

Ex.: Gr. πατήρ, G. T. fathar > fadhar (Go.) > fádar (Ags.) > G.
Bater, M. Eng. has again dh (through Norse influence?), but 1. fráter,
G. T. brôthar, Eng. brother > G. Bruber according to form. H. G. T.
lithon, laith, but pl. lidhon-, part. lidhan-, Eng. louthe, > G. leiben (litt by
levelling), gelitten. L. sequ.or, G. T. söhwan, sahw, ségwan-, sögwan-,
O. S. sehan, sah, sálwum, gisewan, Eng. see, saw, seen (levelling) > G.
fehen, ſah, geſehen (levelling, h silent). G. T. wösan, was, wérum-, wösan->
Eng. was — were > G. war (levelling), waren, geweſen (levelling). Compare ſteſen — foð (for, levelling) — geſoren.

- 412. In certain consonant groups the first shifting of Grimm's Law allows of modifications.
- 1. Original st, sk, sp remain, e. g., L. vestigium + G. Steg, Steig; L. se in poscere + G. T. sk, Eng. and G. sh, sh in sprihen, washen (see **457**, 4). L. sp in spicere, speculum + G. spähm + cspy, spy.
- 2. Before t every dental has become s, every labial f, every guttural kh, &, while t remains intact, but st can become ss by assimilation. Examples are very numerous.

Du weißt < waist < * waid+t; I. cap-tus + G. -haft (but see Kluge); L. noct-em + G. Racht + night; Macht + might < Vmxg', from which mag — mögen, ablauts. VI.; gewiß < *wid-to' a past participle < Vwxd, + L. vid-, + to wit, wist. The differentiation into st and ss is difficult to explain. Kögel ascribed it to accent, but see Kluge, P. and B. Beiträge, vol. VIII. A different origin has the st of Reft, Maft (of a ship), Gerife, and a very few others, viz., < zd. For these see Kluge. See also 454, 3.

THE GERMAN SHIFTING.

The second or German shifting we shall treat chiefly with a view to represent Eng. and G. cognates. We shall not treat of every dialect separately. It must suffice to say that upon the extent of shifting the classification of the dialects is based. See 480. For a full account, see Braune's article in P. and B. Beitr., vol. II. In fact, to Braune we owe the best light that has been thrown upon this difficult subject. This second shifting, though coming within the historic period of the language, had been much less understood and more misrepresented than the first shifting. The material was very different from that of the first shifting and the result had to be different, though Grimm supposed that the first stage was reached again in H. G. Nor is there room to enter into the chronology of the various steps, though it has been tolerably settled. The latest shifting, th > d, we find still going on in the 12th century, and is the most extensive of all the shiftings. Geographically the movement began in the South and the farther North it spread the less it grew and the later it occurred. See 480. We follow the order of the formulas. Where Eng. is identical with G. T., as is generally the case, the Eng. examples will at the same time illustrate the corresponding sounds and the cogreates of Eng. and G. For foreign words see 492-494.

- 413. Form. I. 1. G. T. d > G. t. Eng. dead G. tot; do —thun; bed Bett; steady—firtig; mother for M. Eng. moder Mutter (see 411); hoard + Hort.
- a. Where Eng. d G. b in a small number of words, there d has been restored in N. H. G. through L. or M. G. influence, M. H. G. showing t; or the word has come from L. G. into the written language. Eng. dumb

- —bumm; dam Damm; down Dünc; "Dutch" is L. G. > Eng., while G. beutsch belongs to form. III. After 1 and r are some cases of d-b, e.g., wild witb; mild milb; murder Morb. These are due to a change of Ags. th > d. Also after n, e.g., wind winden; bind binden. These are due to a change of O. II. G. t > d.
- 2. Eng. b and g = G. b and g, see 408, e.g., bold bab; beck Bah; gold Gold; garden Garten. For mb mm, see 490, 4. But b and especially g have often disappeared in Eng. Compare hawk Habit; Haupt, < houbit, head; Regen rain; Bagen wain. G. b Eng. v, haben have; lichen love, etc.
- 3. G. T. bb > G. pp: Rappe < * rappo, G. T. rabbo-, but Rabe raven. Rnappe < * knappo, G. T. knabbo-, but Knabe knave. Ebbe + ebb, is L. G.
- 4. G. T. gg > G. đ, but G. T. gg > Eng. dzh (-dge). *mugjô, Ags. myeye, Eng. midge G. Müdt. *hruyjo, Ags. hrycge, Eng. ridge G. Nüdtu. Eng. edge Edt, bridge Brüdt, etc. Egge, harrow, is L. G.
- 5. y = sonant stop has sprung either from I. E. x = sonant affricate according to form, I. or from I. E. z = surd stop > G. T. surd spirant according to form, III. and Verner's Law, in both cases through a sonant spirant. Notice "affricate" is a double consonant, "spirant" is a single one. The process of G. T. y > G. z is loss of sonancy the same as I. E. y > G. T. z.—Notice that consonants were doubled, i. e., lengthened before West-germanic j, w, r, l, as the examples show, see 389, 5.
- **414.** Form. H. G. T. z > G. x. 1. G. T. t > G. ts $(3, \mathfrak{k})$ and this remains when initial, after r, \mathfrak{l} , u and when sprung from tt, but becomes z (Grimm's sign), supposed to have been a lisped s, and later s $(\mathfrak{l}, \mathfrak{k})$, see **490**, 2.

In M. H. G. this z and s never rhyme, hence they must have been different sounds tt > ts is much later than t > ts.

Examples exceedingly numerous: tongue — Junge; wart — Barge; holt — Hinge < L. monēta through * mānita; * sattjan > Eng. set — G. seta ; whet — wesen; wheat — Beigen; sweat — someta is water — Basser; hate — Hissen, etc. All seeming exceptions can be explained in some way or other, e. g., in foreign words introduced since the shifting: tar — Terr < L. G.; temple — Temps < L. templum; tun

- Tonne < Keltic(?). The combination tr is an exception. Compare also ft, kht, st, 412, 2. True—tru; bitter—bitter < G. T. bitr-os; winter—Binter. Sinter and unter are M. H. G. hinder, under, see 413, 1, a. Words introduced before the shifting are Germanized, e.g., plant—Phance < L. planta; tile—Bicgel < L. tegula.
- 2. G. T. $\mathbf{p} > G$. $\mathfrak{p}\mathfrak{f}$, which remains initially, after m, and when sprung from pp, but passes into f after vowels and r. l.

Ex.: Eng. path — G. Pfat; pea(-cock) — Pfat < L. pavo; plight — Pfith; swamp — Sumpf(?); rump — Rumpf; hop, hip — hüffet; stop — ftopfet; sleep — fchlafet; hope — heffet; sharp — fchaf; help — heffet.

- a. Where Eng. and G. p correspond, they indicate either L. G. or other foreign words introduced since the shifting, e. g., pocks Poden; poke poden < L. G.; pain Pein < L. pana; pilgrim Pilger < L. peregrinus; pulpit Pult < L. pulpitum.
- 3. G. T. k > G. kh, jh (fi), except initial k and double k, which appears as f. Eng. has frequently palatalized its k into tsh, written ch, tch.

Ex.: Eng. like — gleich; bleak — bleichen; knuckle — Knöchel; knee — stnie; church — strick; cook, kitchen — stoch, stücke. Westgerm. kk — Eng. k — G. d: bake, baker — baden, Bäder; waken — weden; acre — Ader; naked — nadt.

- a. The links between G. T. z and G. x are probably surd stop + aspirate, surd stop + spirant, spirant, e. g., k > k + H > kkh, an affricate, > kh. kkh is still S. G., this the Irish pronunciation of Eng. th. The processes are identical with those of I. E. z > G. T. x. But G. x is a long consonant or an affricate, while G. T. x < I. E. z is a single, weaker consonant. Compare the present wagen having a long and strong d with Bagt; beffen, Sanf with the initial f as in für, Fener, ver. The latter corresponds to G. T. f. the former to G. T. p. See below.
- 415. Form. III. G. T. x > G. y. This shifting only took place in the dentals. G. T. th > G. d. Eng. thing G. Ding; that tas; hearth Here; earth Erre; brother Bruter.

As to extent and time of this shifting, see p. 185. The process of the shifting of the G. T. surd spirant under the accent> G. sonant stop, final surd stop is identical with that of G. T. surd spirants unaccented> G. T. sonant spirant> G. T. sonant stop in certain positions. For this G. T. y> G. z. see 411.

1. Eng. h, gh, f correspond to G. h, d, f (v), but Eng. gh is often silent.

- Ex.: Eng. floor G. Flur; fowl Beggi; heart Serz; hart Sirst < hirz,; might — Macht; fraught, freight — Fracht.
- 2. G. T. hw, Eng. wh G. w. Ex.: Eng. which G. weld; whelp Welf.
- 3. All irregularities must be explained as before, either as due to levelling or to foreign origin. See 414, 1. herd parks, L. G., but hint—shep-herd according to rule; throne—Thren < Gr.-L. thronus. The relation of Taufinh to thousand is not cleared up.
- Eng. f G. &, L. G., see **493**, 4. h before I and r has been lost in both languages. Comp. $\kappa^2 \nu \tau \acute{o} c$, Ags. $\hbar \ell \acute{o} d$ Eng. loud, G. laut; $< V \acute{k} r x$, ablauts II. Lat. cruor Ags. $\hbar r ca$ Eng. raw, G. ray.

THE INTERCHANGES RESULTING FROM THE SHIFTING OF G. T. SPIRANTS. See 411.

- 416. Levelling has so largely done away with the results of Verner's law in German that what is left of them may be looked upon as isolated cases. They appear more in derivatives of the same stem than in the verb-inflection.
- 1. t—t most frequent: leiten litt, gelitten; leiten; sieten jott, gesotten. f—b: tarf, türsen, Notturst tarben, verterben (?). h, ch g: ziehen (h silent), Zucht gezogen, Herzog. f—r: Bersluft, + loss verlieren (levelling), verloren + forlorn; siesen Kur, erforen, + choose, chose, chosen (s is due to levelling).
- **417**. Correspondences between Eng. and G. consonants outside of the shiftings.
- 1. Loss of n before spirants in G. T. and later. Before G. T. kh as in fahen (archaic for fangen) < *fanhan; tachte < *danhte, + thought, etc. Ags. Eng. also before th and f, where G. has preserved n. Compare: tooth 3ahn; mouth Munt; but south Süt, of L. G. origin; soft fanft, but facht, of L. G. origin.
- 2. Eng. wr G. r: Eng. write reißen, rißen; wrench rensen; wretch Recte; wring ringen.
 - 3. Eng. w, r, l, m correspond to G. w, r, l, m.

- 4. For Eng. m G. n, see **490**, 5. For Eng. mb G. mm, see **490**, 4.
 - 5. Eng. s (original s) G. s: house haus; sink finten.
- a. Eng. x G. x, φφ. The phonetic value of the sign is the same in both languages. The sign x, borrowed from Latin, stands for φφ, fφ, fφ. Ex.: Eng. wax G. wadfen; fox δυφφ; axle Aφfe; box Büdge < Gr. πυξίς; box Budgeaum < L. buxus. Eng. s—G. fφ, see 490, 1.

ACCENT.

418. We are following still the traditional method of treating of the accent, but, as a matter of fact, in speaking we never divide the word into the syllables or the sentence into the words as they are printed or written. Such a division is purely for the eye and artificial. We speak in "breathgroups," as Sweet calls them. Sievers uses "Sprachtakt," but "Sprechtakt" would be better. A breathgroup consists of a certain number of sounds that can be pronounced "in one breath," as we say. If one or two sounds have very strong stress then the number of "syllables" in the group is small, because the store of air is spent. If one syllable has only the amount of air spent upon a secondary or medium accent, then the number of syllables can be larger. Eng. and C. have a prevailingly falling rhythm, that is, the stress falls upon the initial sounds or syllable of a group. French is different. Its stress is very uniform and the predominant stress very difficult to place in the group. Excellent authorities, both French and Dutch, claim that the stress lies at the beginning; other authorities, just as high, that it lies at the end of the group. The French groups are very long.

In G, and Eng, the amount of stress concentrated upon some part of the group varies, else there would be a great monotony as in French, but Fr. has a more varied intonation or "tone," which gives it an advantage over Eng, and G.

- 1. For very trustworthy division into breathgroups, see Sweet's transcriptions of Eng., G. and Fr. in his "Handbook." For the whole difficult subject of the synthesis of sounds, see Sweet and also Sievers' Phonetik, § 33. Notice that the principle of breathgroups is recognized when we speak of proclitics and enclities. All syncope, clision, contraction, metre, assimilation take place according to this principle. When there are too many syllables to to be pronounced conveniently by one breath-impulse some are cut off and always according to a certain fixed rule varying with the different 'unguages. Or if the sounds coming together in a group are very different we assimilate them to each other. This we call "ease of utterance" or "cuphony."
- 419. We distinguish three degrees of accent or "stress," viz., chief (strong, primary), medium (secondary), and weak, marked respectively ', `, `. Thus: U'picl, ta'utba'r, Ta'utba'rtei't.
- 1. "Weak" also includes "unaccented," when there are not syllables enough, e. g., \(\Delta \) briga ric "n, \(\Omega \) problem than m. But when the word is very long

or in a group of several words we may distinguish not merely between weak and unaccented, but the variety of stress can be further marked by figures, e. g., Bere'bja mici't (Be unmarked or 4 1 3 2): Großbergogtum, 1 4 3 2 25 1 3 2 4 5 Mitertunofunde, Bierzigjähriger.

Accent in Uncompounded Words.

- 420. The chief accent rests in all uncompounded words on the stem-syllable (no matter if suffixes and inflectional endings follow). This syllable is always the first, e. g., La'ter, vă'terlich, fo'lgiam, Lă'cherlichfeit, Rlei'not, schmet'cheln, die Hu'ngernden.
- 1. Exceptions: lebe'nbig from le'ben; words in -ci and -ier, -ieren, e.g., Malerci', benebei'en, vermalebei'en, flubic'ren, Barbic'r; luthe'rijd (long e), meaning "Lutheran," pertaining to that confession, but la'ther(i)jd, of, pertaining to Luther; äthe'rijd; a few derivatives in -ha'ftig (see 526.2); wahrba'ftig, leibha'ftig, sometimes teilha'ftig; also wahrfhei'nlid, but see 422,2.
- 2. This limitation of the primary accent to the root syllable is a peculiarity of the Germanic languages. It is called the logical or "gebundene" accent. The other Indo-European languages have the "free" accent, which can fall on any syllable. The original accent must have been preserved in G. T. until after the shifting of I. E. z > G. T. z, because then the law of spirants (see 411) went into effect.
- 3. The Tentonic element of Eng. has, of course, the same accent as G. and even the Norman-French element in Eng. has largely submitted to the Germanic accent, e.g., sca'son < L. satio'nem; rea'son < L. ratio'nem; li'berty < L. libertat'tem. Compare the foreign accent in G. Caife'n, raijennie'ren, Qualità't. It is to be noted that the two past participles and the pret. pl. were not stem-accented, originally, standing in contrast with the pres. and pret. sg. The accented suffixes we cannot enumerate.

Accent in Compound Words.

- 421. In compound words the chief accent rests upon the stem-syllable of the first component part if the second part is a noun (subst. or adj.); on the stem-syllable of the second part if this is a verb or derived from a verb: Ha'hrftra'hr, Na'htwa'hter, Sho'hhu'nd, lie'hrei'd, gna're nvo'll, Bei'trag, U'ntewert, Hü'rhrech, U'rteil, vo'rnehm, Mi'hgunft; but verhre'hen, ertei's len, verne'hmen, betra'gen, vollbri'ngen, mißli'ngen, vollfo'mmen.
- 1. This old principle should be understood even by the beginner, though to him there will seem to be many exceptions, which an advanced scholar will generally account for. Watworten, u'ritilen are no exceptions, because they are derived from the noun.

Univert, Uricii; nor are bas Berla'ngen, ber Befe'hl, verne'hmlich, because they are derived from the corresponding verbs. Bellto'mmen has the correct accent, because it is a past participle.

The prefixes are fully treated in the word-formation, which see.

422. The more striking exceptions are as follows:

- 1. A large group of words which have not become real compounds but have sprung from mere juxtaposition in orthography: Das Lebeho'ch, vivat; viellei'dt, Biellie'bhen, Lebewo'hl, Bergi'smeinnicht, Hansna'rr, Hohersprie'ster, Langewei'se (but La'ngweil after the genuine compound Ku'rzweil), Jahrhu'ndert, Jahrze'hut, dreie'ing, Dreiei'nigkit, aller- + -lie'hst, -e'rst, -bei'sigensfest, etc.; Dreifö'nigksfest. Their etymologies are apparent.
- 2. In a number of adjectives, most of them ending in -lid, and their derivatives, the chief accent has shifted from the original position to the syllable preceding the suffix: vorzű'glid, but Bv'rzug; vortre'fflid; abfdeu'lid, but H'bheu; ausdrü'dlid, but H'sbrud; bie Bortre'ffliditit, bie Husfü'brlidfeit, leibei'gen. In some the accent is uncertain, but the chief accent on the first element is preferable, e. g., ha'ndgreiflid better than bandgrei'flid; no'twendig, wa'hrfdeinlid, ei'gentümlid. A distinction is sometimes made between ei'gentümlid, "belonging to," and eigentümlid, "peculiar to." Notice offenba'r.
- 3. barmhe'rzig, full of pity, Kar- (formerly Char) as in Karfrei'tag, Good-Friday, Karmo'che, Holy Week (Kar-, +care, sorrow, but also Ka'rweche), Architei'cham, Corpus Christi, perhaps because the meaning of the first element is no longer clear. Sübo'ft, Sübfübo'ft, norbwe'ftlich hs in English.
- 4. In a large number of adjectives in which the first element denotes a comparison or a high degree, e.g., himmetho'dh, as high as heaven, cista'th, as cold as ice, fohlfdwa'rh, the accent may stand on the second element, but must remain on the first when the adj. is inflected. Strinti'dh, "very rich," originally "rich in precious stones," fici'nreidh, stony, are sometimes distinguished.
- 5. alter— is accented only in a'llerhand and a'llerlei, doubtful in several, as in a'llerfeits. all— is generally unaccented: allei'n, allma'hlid, allgenei'n, but also A'llmadt, A'llvater, A'lltag and its derivatives, but also allta'glid, as sub 4.
- 6. un... For this prefix it is difficult to find a general rule. The best founded and most practical is this, based upon nominal and verbal compounds: In-compounded with nouns and adjectives not derived from

verbs attracts the chief accent; if they are derived from verbs, then the stem-syllable retains its original accent, e, g., u'nfruchtbar, u'nbantbar, u'nflar, ll'nmensch, but unglau'blich, unsä'glich, unentbe'hrlich, unvera'nmortlich, unbegrei'slich. Notice, however, une'nblich, ungebeu'er — u'nacheuer. See a.

- a. With regard to adjectives there is also a feeling approaching a principle, that un should have the chief accent, when a regular adjective exists, of which the compound with undenotes the contrary or negation: brau'chbar, u'nbrauchbar, fi'chtbar, u'nfichtbar, etc. This feeling frequently unsettles the accent, as unverseiftich > u'nverseibtich.
- 7. Ober-varies in accent in compounds consisting of three parts. When it belongs to the second part it has chief stress, and the third part secondary stress: Oberfiefer-verle'tung, injury of the upper jawbone. But if the second and third form one subdivision and ober-denotes rank, then it has less stress than the third part and the second has chief stress: Oberfidu'lle'her = chief school-teacher; Obermu'nbide'nt; Obergeri'dute'mwalt, chief attorney. But accent the first and last examples differently and they mean different persons, viz., O'berfoulle'her, teacher at a high-school; O'bergeridtean'walt, attorney at a high-court of justice.
- 423. In compound adverbs the chief accent falls generally upon the second element, if they are compounded of a simple adverb and a preceding or following noun or pronoun; or if compounded of two adverbs, c. g., bergau'f, strema'f, jahrei'n, jahrau's, jufo'sge, ansta'tt, hinü'ber, hervo'r, sefo'rt, tahi'n, tahe'r, überau's, überei'n, überhau'pt, vorha'nten, ahha'nten.
 - 1. This includes their derivatives fefo'rtig, gufric'ben, vorha'nben.

Exceptions are: 1, compounds which contain demonstrative and posses sive pronouns, e.g., be'mmad, be'rgestalt, mei'netwegen, etc.; a'nber- or a'nbers-, -'halb, -'mätts, -gestern, e.g., a'nberswe, a'nberseits, v'berhalb, hei'mwärts, vo'rwärts, vo'rgestern, etc.; be'nnoch, c'twa; 2, many compounds which are fused adverbial phrases and derivatives from compounds. They retain their original word accent, e.g., a'ngesichts, a'bseits, na'chmittags, ü'bermergen, w'sebends.

See the rhetorical accent, 426.

- 424. For the secondary accent rules can be given only in derivatives and compound words.
 - 1. Certain nominal suffixes have always medium stress.

- a. Substantive suffixes: -at, -ut, -od; -heit, -richt, -in, -leit, -lein, -ling, -nis, -fal, schaft, -tum, e. g., hei'ma't, Klei'no'd, E'wigkei't, Fi'nsterni's, Trü'bsa'l, Kö'nigtu'm.
- b. Adjective suffixes: -bar, -haft, -icht (?), -isch (?), -lich, -sam, -selig, e. g., bekla'gba'r, e'hrenha'st, e'rdi'cht, he'rri'sid, la'ngsa'm, trü'bse'lig.
- 2. In nominal compounds the secondary stress falls upon the root-syllable of the second part, e. g., Rü'dgra't, Fa'hrwa'ffer, Un'henfei'te, Ri'dsterfü'llung, U'ngere'dstigleit, le'bensmü'de, hi'lfsbe=rü'ritig.
- 3. In do able compounds when one or both parts are again compounded the secondary stress falls upon the first or the only stem syllable of the second part. But care must be taken in properly separating the parts, e. y., Be'tt-vo'rhang, Re'dhungd-a'blage, Go'lb-be'rgwe'rf, Pe'l3-ha'ndidu'h, Ke'lbma'rfdall; but Ha'ndidu'h-ma'der, Nu'hbau'm-ho'l3, Schri'stüc'llerverei'n.

The misplaced medium stress would give no meaning at all, e.g., $\mathfrak{N}_{\mathfrak{U}'|\mathfrak{h}}$ -bau'mholz, because bau'mholz is meaningless. In Feu'erversicherungegestische secondary accent on -si'ch- is only possible, if there is such a thing as Feu'er-re'tungsgeschschaft.

- 4. The foreign endings, of course, also cross this accentuation, e. g., Bu'doruderei', U'ntersefretaria't, i'rrlichtelie'ren.
- 425. Unaccented are all inflectional endings, many prefixes and suffixes. The syllables generally contain $\mathfrak{e} = \mathfrak{eh}$.
- 426. The rhetorical accent can interfere with the placing of the various degrees of stress, as in English: ras Wilt nicht c'rjagen sentern ve'rjagen; ra'rbei and tabei'; ei'nmal, einma'l. In Sch,'s Wallenstein occurs Ka'nn nicht sein, fann ni'cht sein, etc.
- 427. The accent in foreign words is as a rule foreign. Very few words have taken German accent when introduced since the O. H. G. period. Substantives in -ic and -ci, verbs in -icren retain, for instance, the primary accent on these suffixes, e.g., Magie', Theologie', Druderei', studie'ren, bantie'ren,

B. HISTORICAL COMMENTARY UPON THE ACCIDENCE.

Comments on the Noun-Declension. 1. Vowel-Declension.

[See table on next page.]

There are two numbers, three genders. Only two cases have now endings, viz., G. sg. and D. pl., but other parts of speech still infect for the N. and A. The number of cases was gradually reduced. In O. H. G. there is still an Instrumental.

- 428. 1. There were two large systems of declension according as the stem ended in a vowel or in a consonant. Vowel stems ended in o or in â. We generally count here also the *i* and *u*-stems, but they really belong to the consonant stems, since i and u have the functions of consonants as well as of vowels. Stems in o (jo, wo) belong to the I. E. e o ablaut-series and are always masculine or neuter. Stems in â (jâ, wâ) belong to the a â series and are always feminine. jo, wo, jâ, wâ are counted as separate classes, because j and w produced some peculiar changes. u-stems are very rare, since they soon became i-stems, e.g., sunu, pl. suni, Göhne. There is only one neuter i-stem in O. H. G., viz., meri, bas Meer + L. mare.
- 2. The consonant stems end in n, r, in a dental and in a guttural. The most frequent are the *n*-stems, to which went over a great many fem. nouns from the earliest times, e.g., zunga + L. lingua for dingua.
- 3. J. Grimm fancied that there was strength in the vowel-declension and so called it "strong," the consonant declension he called "weak." The names have been generally accepted and though Grimm's reasons are fanciful the terms have the advantage of brevity.
- 4. The stem and case endings have been very much reduced according to certain principles called the "laws of finals" and the "rules of syncope." We cannot illustrate these here, as it would presuppose a knowledge of the older dialects. There was also a great levelling of eases, e. g., the N. sg. fem. (d-stem) took a from the A. sg. fem. Its own vowel had to go according to the law of finals.

O and Jo-Stems.

5. The nouns sub 46, 1, in cl. cn (< cm or cn), and cr are o-stems that lost the c of the plural in M. H. G., see 434, 3. Masc. in cr < aere < \hat{a} vi (originally jo-stems) and those of the form vogel retained their c longest. The nouns sub 46, 2 are the original jo-stems, in which c is the remnant of jo, O. H. G. i. When this c was lost, the nouns were treated as common o-stems and now belong to the II. strong class sub 50, 4. Notice that the umlaut of a jo-stem runs through sing, and pl.; the umlaut of

U-STEMS. O. H. G.	sunu sunes sun(i)u sunu	sun(i)u, -i sun(e)o sunum, -im	Jâ-STEMS. O. H. G.			mâginne mâginno maginnôm

	sculine.				oainii	Бет		meN.

an i-stem appears now only in the plural. Rüfe is treated like a jo-stem, < 0. H. G. châsi < câsius < Latin câseus.

6. The feminines and neuters in -nie sub 50, 1 ended in M. H. G. in -e (-nisse), both in the sing. and pl. The ending of the sing. was lost in early N. H. G. Also the -c of the neuters with Gc- sub 50, 4 was lost, and they really belong to the first class, see 46, 2. Both groups are primitive jo-stems. The monosyllabic neuters of 50, 4 followed the masc. o-stems of 50, 2, and therefore cannot have umlaut. In O. and M. H. G. these neuters were either uninflected or took the -ir, -er of 56; see 431. The masculines sub 50, 2, 3 are o-stems, and come properly by their -c. See p. 195.

429. *I*-Stems.

The paradigms of "kraft" and "gast" show which cases were entitled to umlaut. The sg. of the masc. very early took its (t. and D. from the o-stems. The feminine was made invariable in M. H. G. since the apparent cause of umlaut had disappeared and since all other feminines, strong and weak, did not vary in the root-vowel.

1. The old bulk of the third class is made up of *i*-stems. Their number has been increased by *w*-, *o*-, *jo*-, and *cons*-stems. Fuß and Bahn were originally *cons*-stems. Comp. Gr. ποδ-ός, L. dent-is. They appear as *u*-stems in Gothic, as *i*-stems in O. H. G. Racht is also a *cons*-stem. Comp. L. noct-is. Isolated cases of its old inflection are Rachts the adverbial genitive and the dative plural in Beihnachten < zen wihen nahten. In Rachtigall + nightingale appears the genitive of its *i*-stem inflection; compare also Bräutigam + bridegroom, lit. "bridesman." (See 489, 5). An isolated *u*-case is "Sanben" < O. H. G. hantum, dative plural, in abbanden, lost; vorhanden + "on hand." "Nöten" is an isolated dative plural; the nominative plural is obsolete. Compare the Eng. umlaut in mouse, nice; louse, lice; loft, lift, Ags. lyft, but Go. luftus; cow, kine, etc. Dachtig is O. H. G. masculine *i* stem.

- 430. 1. A small group of fem. is interesting, because the sg. was levelled in favor of the longer umlaut-forms of the G. and D., while the pl. became weak at the same time. For instance, bit Ente, the duck, inflected M. H. G. at first ant, ente, ente, ant; pl. ente, ente, enten, ente. Then it became ente for the whole sg., enten for the pl., as it is now. Similarly M. H. G. bluot, now bit Blüte + blowth; sal, now bit Säule, column; vurch, bit Furch + furrow, no umlaut in M. H. G.; huf, bit Süfe, this form "huft" with excrescent t, + hip, also Eng. with umlaut, + Ags. hype; stuot, bit Stute, + stud. Ihräne, Bähre + tear, Ihür(?) + door, are originally plurals, that have become singulars. See Kluge.
- a. In this way doublets could spring up, e. g., M. H. G. sg. stat, stete, stete, stat furnished bie Statt + stead, bie Statt, pl. Stabte, city, and bie Statte, pl. -n, place, spot—all + Eng. stead. Statt also occurs in the sense of representation "in place of," ankatt, an feiner Statt, an Athbeskatt, to adopt as one's own child. Another such is M. H. G. fart—modern bie Fahrt, pl. Fahrten, ride, and bie Fahrte, pl. Fahrten, track, seent.
- 2. All nouns in -heit, -feit, -fehaft and a large group of others were in M. H. G. still strong (mostly i-stems), but are now weak.
- 3. The modern fem. nouns in -in, pl. -innen, are also strong in O. H. G. The suffix -in < -njd. See paradigm of magin. They had the fate of all fem. nouns, viz., invariable in the sg., generally -en in the pl.

431. Plurals in -er. See paradigm, p. 195.

- 1. This sign started from old os-stems corresponding to L. genus, generis; corpus, corporis. It is rare in O. H. G. in the sg., where it may have been even reintroduced from the pl. In the G. and D. pl. -o, -um are the regular case-endings. -ir therefore is really stem-ending, but it was too convenient a form for the pl. to escape being used as a pl. sign. Some eight to ten nouns are thus inflected in O. H. G. In M. H. G. -er spread and gradually formed a pl. even of masculines.
- 2. The word Ei is originally a jo-stem. The double plurals in and r have sprung up from the apparent necessity of distinguishing sg. and pl. of neuters, which according to the law of finals had to lose all endings. Some nouns took r, some rr, some both. In the latter a distinction in meaning developed. See 58 and the inflection of wort and kalb, p. 195.

2. Consonant Declension.

- **432.** The masculine and neuter n-stems ended once in -on, -jon, the feminines in -on, -jon. They correspond to the L. homo, hominis; fulmen, fulminis; ratio, rationis. As to their frequency in the Teutonic languages, see **478**, 5. The Latin declension shows also in the singular, how the case-endings were added; in O. H. G. these appear still in the pl., e. g., in herzonó ô is sign of G. pl. What was therefore the mere stemsuffix has become a means of inflection in the course of time.
- 1. r-stems are the names of relationship, Batr, etc. They with the dental stems were forced into the strong, first into the o-, then into the i-declension for lack of case-endings, which could appear only in the G. and D. pl., viz., fatero, faterum. Already in M. H. G. the umlaut appears in the r-stems.
- 2. Nouns like Gûte, Menge, Arêfe end in $\hat{\imath}$ or $\hat{\imath}n$ in O. H. G.: guoli, managi, $-\hat{\imath}n$. That is, they were $j\hat{a}$ and $j\hat{o}n$ -stems. They are all derivatives from adjectives, and those in $\hat{\imath}n$ are later than those in $\hat{\imath}$. In O. H. G. they had $\hat{\imath}$ or $\hat{\imath}n$ throughout except in the G. and D. pl., which were managino, managim respectively. Therefore unlaut throughout. The $\hat{\imath}n$ -forms had to coincide in time with the strong feminines in $-\hat{\imath}n(n)$ at least in the sg. and therefore disappeared. They were rarely used in the pl. See paradigm of $m\hat{\imath}ajn$, p. 195.
- 433. 1. All feminines having now no inflection in the sg. and the old strong fem. having taken c(n) in the plural, it is difficult to tell the original vowel-stems from *a*-stems. It would be correct to summarize the changes that have taken place in them, thus:
- All fem. nouns have become strong in the sg. and most of them by far, weak in the plural.
- 2. The fem. \hat{a} -stems (see paradigm) had already two cases in -en, viz., G. and D. pl., the other two were like the whole sg. It is not to be wondered at, then, if N. and A. pl. also took -en and thus a sharp contrast was formed between the sg. with no variation and the pl. with -en throughout. By this levelling and by the $j\partial n$ (\hat{a} and $\hat{a}n$) stems the loss of -en in the sg. of n-stems was brought about.
- **434.** 1. -n in the D. and G. sg. is still frequent in the 16th century and is preserved in certain phrases and in poetry. Schiller's Wallenstein's Lager has Kirden, Stuben, Somen. Refigement in der Erden (Sch.). See 171.
- 2. The masculines in -c are the bulk of old n-stems in M. H. G. Some nouns have become strong, e. g., Mar, Dahn; others, have become weak, Dirte (originally jo-stem), Delt (already in M. H. G.). See 61; 518, 1, 2.
 - 3. As to the nouns in 46, 1, in M. H. G. e was dropped after r and 1 in

the N. sg. and all through; after m and n only in the N. In modern G. no $-\epsilon$ is the usage. See paradigm of vogel, p. 195.

- 435. 1. In O. H. G. were only four neuter n-stems, viz., δra , \mathfrak{Dhr} ; ouga, \mathfrak{Auge} ; herza, \mathfrak{Her} ; wanga, Bange. In M. H. G. they inclined toward the strong and now the first three have joined the mixed declension; wanga has become weak and fem.; namo, her Rame, was once neuter. Comp. L. nomen, nominis.
- 2. Interesting are bis Viens + bee and bis Viens + pear, in which the inflectional n has entered the stem. Compare the older $\delta \hat{e}e$, δtr . This entering of n into the N. of masculines is very common and has furnished the bulk of strong nouns, 1. class sub 1 and 4, 46, e. g., Nûden, Walgen, Pfoßen, Roggen, Schaben (but notice the isolated ne8 if Schabe," it is too bad). One can tell these by comparing them with their Eng. cognates + ridge, gallow(s), post, rye, etc., which show no n.
- 3. In her Deibe < heidan ! heathen; Christian < kristen < L. christianus; Make < rabe and raben + raven, n is lost as if it had been regarded an inflectional suffix and the nouns became weak.
- 4. In bie Ferse < fersana, Ags. fyrsn; Aette < ketene, chetina + Eng. chain through Romance < V. L. cucina, L. caténa; in bie Auche < küchene, kuchin < V. L. cucina, L. coquina + Eng. kitchen; in bie Mette < metten, mettina < V. L. mattina, L. matulina (hora) + Eng. matin, the n has also been lost and the nouns became weak.

Comments on the Adjective-Declension.

436. O. H. G. paradigm of o-stems:

Sg.	N.	Masc. BLINT, blintêr	Fem. BLINT, blintíu, –(i)ú	Neuter. BLINT, blintaz
	G.	BLINTES	blintera, –u	BLINTES
	D.	blintemu	blinteru, -a	blintemu
In		blintan BLINTU	BLINTA, —0	BLINT, blintaz BLINTU
Pl.	N.	blinte	blinto	blintíu, –(i)ú
	G.	blintero	blintero	blintero
	D.	blintêm, –ên	blintêm, –ên	blintêm, –ên
	A.	blinte	blinto	blintíu, –(i)ú

437. The adjective was once declined like the substantive, when both were still "nouns." In the Teutonic languages the so-called "uninflected" forms are still the noun inflection, because *blindoz > blind(t) just as *dagoz > tag. The strong declension is the pronominal inflection, which in some cases coincided with the substantive declension. These cases and the uninflected forms are put in small capitals in the paradigm.

- 1. The adjective pronouns led the way in this coalescence of the two inflections into the one strong one. blinter is only S. G., the uninflected alone occurs in M. and L. G.
- 2. The double forms blintlu, blintlu are perhaps due to jo-stems (Paul). blintlu could give M. H. G. blinde. The M. H. G. forms, both strong and weak, differ very little from the O. H. G. In the neuter pl. blindlu lasted long.
 - 3. In O. II. G. the vowel-stems are reduced to o- and jo-stems.

The jo-stems are still recognizable by the umlant which runs throughout, e.g., $|\phi in$, 4. The weak declension was exactly like the n-subst. declension. Now the sg. A. fem. and neuter are like the sg. N. just as in the substantives.

Comparison of Adjectives.

438. -cr, -cft represent O. H. G. -iro, $-\bar{v}ro$, $-\bar{i}st$, $-\bar{o}st$. The o-forms, are not frequent in O. H. G. i in ir, ist produced umlaut, which spread in M. H. G., so that even then the umlaut began to be looked upon as an essential part of comparison.

They were declined almost exclusively weak at first. e of bezzere (N. sg.) was lost just like the e of voyele, see p. 195.

1. It is generally stated that -iro, -oro come from an I. E. suffix -jans, but how has never been made clear. It is probable that, since -oro was at first attached only to o-stems, the o is secondary and due to the stem-suffix. The comparative-suffix seems to have been -is and to this -t- was added for the superlative. But -t- is probably identical with the ordinal-suffix.

Irregular Comparison.

- 439. besser < O. H. G. bezziro, Ags. besera, best < bezzist, Ags. bess ; mehr < O. H. G. méro, Go. maiza, meist < O. H. G. meist, Go. maists; minder < O. H. G. minniro, M. H. G. minre, mindest represents O. H. G. minnist, M. H. G. minnest.
- 1. All contain the regular suffixes. befor comes perhaps from a stem *b'ad. baß is the regularly developed comparative adverb. Comp. M. H. G. min, mc, Ags. min, md. r disappeared according to the law of finals. Whether mehr is related to L. magis, major, is doubtful. minber has excrescent b. The O. H. G. nn shows that L. minu-s is its cognate. minbeft is a N. H. G. superlative < minber.
- 2. Grft is < O. H. G. Éristo, comparative êriro. Ghe is a modern formation for the positive, + Eng. ere, erst. Lett comes from a stem *lat, from which Eng. late, later; last—latest; also + to let = "hinder." lah, tired. Lett < lett, lat(i)st, just as Eng. last < latest. See Kluge. Fürst + first is < O. H. G. furi (adverb), furiro, furisto.

Comments on the Pronouns.

440. PERSONAL PRONOUNS.

	М. Н. С	. Common gender.	
	I.	II.	III. refl.
Sg. N.	ich	du, dû	
a	(mïn	din	sın
G.	$\begin{cases} m n \\ (m nes, -er) \end{cases}$	dîner	sîner
D.	$_{ m mir}$	dir	(im)
A.	mich	dich	$\operatorname{\mathbf{sich}}$
Pl. N.	wir	ir	
G.	unser	iuwer	(ir)
D.	\mathbf{uns}	iu	(i n)
	uns	(iuch	sich
Λ.	{ uns { unsich	iuwih {	
	III. person w	ith form for each gender.	
Sg. N.	ër	siu	ëz
G.	sîn, ës	ir, ire	ës, sî n
D.	im(e)	ir, ire	im(e)
A.	in, inen	sie	ëz
	O. H. G. inan		,
N., A.	si(e)	si(e), sî	siu
G.	ir	(O. H. G. iro)	
D.	in	(O. H. G. im)	

- 1. The pronouns of common gender come from various stems, which as well as the inflections are difficult to analyze. cr, fie, $c\delta$ come from two stems i (< ei oi) and $si\delta$. For $c\delta < ej +$ Goth, ita, see 490, 2. Compare L. is, ea, id.
- 2. The pronouns were extended by two endings, -cr and -cn, in N. H. G. The G. sg. meiner, etc., are no doubt due to the influence of the strong adjective declension and to unfer, curr (G. pl.). The same endings appear in herer and henen, but these are later, since both mines and miner appear in M. H. G. sporadically. iuch, originally A., spread over D. like the reflexive "sin." sin crowded out es (G. masc.) already in O. H. G. and es (neuter G.) has general force, not referring to a single object. N. H. G. Spre is probably an analogous form with "dero" before a title and not

the old fem. G. sg. or pl. iro as generally stated. ir (G. pl.) was still the rule in the 16th century and as G. sg. still in the 17th, beiner was established later than meiner and feiner, which were the rule early in the 17th century.

Possessive Pronoung. 441.

- a. The possessive pronouns are of the same origin as the genitives mein, bein, fein, etc., of the personal pronoun. They are most likely not derived from the latter as is generally stated, but rather the reverse. The adjective suffix -in < in seems to lie in them attached to the primitive stems *ma, *twa, *swa, which appear in all Indo-European languages. Comp. L. meus, tuns, suus, mei, tui, sui.
- 1, In O. H. G. the possessives were declined strong even when preceded by the definite article. In M. H. G. the weak declension came into use. The long forms in -ig sprang up late in the 16th century.
- 2. Apr. her, their, however, is derived from the G, of the personal pronoun of the third person. It sprang up in the 12th century and was fully established in the 15th.

THE DEMONSTRATIVE PROPOUN. 442.

0. II. G.	Masc.	Fem.	Neut.
•	dê (thie), dër	diu	daz
	dës	dëra, -o	dës
D.	dëmu, M. H. G. dëm(e)	dëru, M. H. G. dër(e)	dëmu
Λ.	dën	dê, dea, dia	daz
In.	diu		diu
Pl. N., A.	dê, dea, dia	deo, dio	dei, diu
G.		dëro	
D.		dêm	

a. Sievers assumes two I.-E. stems, to, tjo; Paul only one, to, explaining i as due to the diphthongization of $\hat{e} > ea > ia$. $d\hat{e}$ without r is the older; r is the same as in wer, er, : L. quis, is. to is treated as o and i stem. dê < thai. dei is probably dual like zwei. O. H. G. daz < G. T. thata, in which final t is a particle. The Instr. exists still in the isolated "befto," + the in "the more," < desde < des-diu. des is the Gen.

443 .		O. H. G.				
	Masc.	Fem.	Neut.			
	Sg. N. dëse, dësê-r	deisu, diusiu	diz, d ëz zi, di z			
	G. dërses	dësera, derra	dësses			
	etc.	etc.	etc.			

dese is composed like a strong adjective of de and a particle sa. In the G. sg. both elements are inflected, generally only the second. diz has in z the neuter pronominal suffix, but nothing else in it is explained. In M. H. G. the forms beginning with diprevailed, always short. bics goes back to O. H. G. dig, but bics first appears as late as the 15th century. Hans Sachs still spells diz, ditz.

1. $j_{\text{en-er}}$ seems to contain the same suffix -in as the possessive pronouns. Its stem is limited to the Teutonic languages.

The origin of "felb" + self is dark.

- fold + such is compounded of swa, so, so and lich, like, -lid.
- 2. The pronominal stem hi, which appears also in the Eng. pronoun he, his, him, her, is hidden in heute < hiudagu (Instr.), heuer < hiujaru, heint (now dialectic) < M. H. G. hinet < hinaht, + to-night. It occurs also in the adverbs hin, her, + hi-ther. Compare L. hi-e, hae-e, ho-e.

444. Interrogative Pronouns.

O. H. G.	Masc. and Fem.	Neuter.	M. H. G.
N. 1	mër	huaz	wër, waz
G.	huës	•	wës
D.	huëmu		wëm(e)
A. 1	nuën(an)	huaz	wën, waz
Instr.		huin, hiu	wiu

- a. From the stem -ko with k^2 that was labialized in Latin and the Teutonic languages. Compare L. quis-quid, quod, which perhaps requires another I. E. stem ki. A. huenan is only O. H. G. and the ending is taken from the adjective declension.
- 1. wit < 0. H. G. wiu, huiu, + why, how, comes from this stem, G. T. hva-, I. E. ko-, + Go. hvaiva, Ags. hū. But the phonetic relation between mic, why and how is not yet cleared up.

Eng. whom is really the D. + wem, but served as D. and A. very early.

- 2. welch < 0. H. G. huëlih, wëlich, + which < Ags. hwylc, lit. "how or what like."
- 3. weder + whether, now only conjunction, is still a pronoun in the 16th century. Formed, with the comparative suffix -bcr < thar < tero, from ko- the interrogative stem. Comp. Gr. $\kappa \delta \tau \epsilon \rho \sigma_0$, archaic form.

445. Indefinite Pronouns.

1. jeber, jemand, niemand contain the prefix io, ie, je, + ever. io gave the original interrogative *meder* indefinite force, jeber < iewëder < iowëder. Like "either," it meant "one of two," "which ever you please." The end-

ing -er was confounded with the adjective-endings -er, -e, -es and the full forms jeberer, jeberes are preserved, though rare, down to the 17th century.

jemand is compounded of ie—man, niemand of ni—ie—man. As to b, see 491. 2.

jeglidy < iegelih < io-gilih, "ever (the) like."

- 2. jedweber < ie—dewëder, "any one of two." It contains an element de, which is also in effic, etwas. Its origin is unknown. fein < dechein. This also contains an obscure element dech—.
- 3. anter + other is a comparative like weter, < 0. II. G. andar < *an —tero.

a. Grimm called a verb "strong" because it would form its preterit of its own resources, without the aid of composition. We retain the terms "strong" and "weak" simply because they are generally used.

448. Tenses.

There are only two simple tenses left in the Germanic languages, viz., the present and the "preterit" which corresponds in form to the "perfect" of the other I. E. languages. What we call "the subjunctive" is in form the optative, the suffix for which was $i\hat{c}-i$, in an o-verb of course -oi. Compare the Greek $\phi\hat{c}\rho ot$ —Go. nimai.

- 449. Personal suffixes. There were two classes. The primary were added to the present and the subjunctive mood, the secondary to the preterit and the optative mood. The O. H. G. 1. pl. in $-m\hat{e}s$ is quite a mystery. The 2. p. sg. present in st, prevailing in O. H. G., has sprung from analogy with nimis-tu and the pret-present verbs, $e.\ g.$, canst. "bistu" occurs in the very oldest sources.
- 1. The 1. p. sg. pres. is either u < 0 in nearly all verbs or m < mi in the few mi-verbs, e.g., nimu but tuom. Peculiar is that the 2. p. pret. subj. has entered the pret. ind. The regular ending was -t, as still found in Gothic and in the pret.-pres. verbs, e.g., Go. namt, G. du wilt, folt (now archaic).

An-e in the 1. and 3. p. sg. pret, and in the 2. p. sg. imper., due to analogy, sprang up in late M. H. G., spread in early N. H. G., became rare in 18th century, and is now archaic.

- 2. These suffixes were either attached to the bare stem as in the *mi*-verbs or by means of a connecting vowel generally called "thematic vowel," which was I. E. o—e for all strong verbs, and in O. H. G. i, ē or ô for weak verbs.
- 450. IMPERATIVE. The 2. p. sg. has the syncopated form of short-stemmed verbs which once ended in -e: neme > nimi > nim. In

weak verbs the ending is amalgamated with the connecting vowel; neri, salbo. neri should become ner, but there was levelling in favor of the long-stemmed verb. The 1. p. pl. is exhortative. It is indicative.

- **451.** Infinitive. This is a verbal noun ending in -no-. Perhaps an isolated accusative.
- 452. GERUNDIVE. It is confounded with the infinitive with which it has originally nothing to do. Suffix is -nj—; hence the double n. It was inflected like any noun. Since in modern German it has taken a construction similar to the Gerundive of Latin grammar, we have called it "Gerundive." The form with -d occurs, according to Weinhold, as early as the 12th century in Alemanic. zi tunne and zi tunde were confounded. In the latter form lies the modern construction, as in time gu beautiende Verschrift.
- 453. PARTICIPLES. The suffix of the present participle was -nt, a consonant stem, but afterwards a jo-, jû-stem, hence nemanti. For the nouns Freund, Feind, Deiland, see 505.
- 1. The passive participles are two verbal adjectives formed by means of -tó- and -nó- (both accented) from the verb-stems, not from the tense-stems. They were at first not limited, -tó- to weak verbs and -nó- to the strong. Compare miss- (the modern prefix miṣ- + Eng. miṣ-) < misto < *mith—tó the weak stem of the verb meiben, mich, gemichen, to avoid: gewiṣ < gawiss < *-witta < *widtó, from the stem of weiṣ, wiffen; alt + old < al—tó- from the strong verb (tho.) alan + L. alere, to nourish. Besides in these and other isolated forms -tó- occurs in the past part, of the pret, pres, verbs and in a class that had no connecting vowel, e.g., gebracht, gebacht, etc., see 454,3. Compare Gr. -róc, L.-tus. -no is rare in non-Germanic languages; compare L. dignus, plenus + full.
- 2. The prefix ge— It is the inseparable prefix ge— and belonged at first only to the participle of verbs compounded with it. But in simple verbs it could give the present the force of the future, it would emphasize the preterit or give it the force of the pluperfect and give the infinitive dependent upon a modal auxiliary the force of the perfect inf. Thus also us the participle it emphasized the completion of an act. Some participles very rarely took ge— in M. H. G., e. g., komen, worden, funden, lâzen, frezzen, heizen. ""Gnabt funden" is common in the Bible. The Patriarch in Lessing's Nathan uses it. Compare Eng. yelad, yelept.

454.

WEAK VERBS.

- 1. The connecting vowels are i(j), δ , δ in O. H. G. The original type of connecting vowel is supposed to have been ojo—cjo, but the reduction to δ (Go. ai) and δ is by no means clear. The large majority have i(j) < * $\epsilon j o$, but a not small number both of originally strong and weak verbs have none. The preterit is formed by the suffix -ta, now -te. Its origin is by no means settled. Paul reconstructs two suffixes, viz., $-dh \dot{a}$ and -ta. The Old Saxon forms sagda, habda, tbda with corresponding participles can only come from $\sqrt{a}h \dot{a}$, from which is also thun + to do. The majority of verbs take I. E. -ta, > tha > da > ta according to Verner's Law. See 411.
- 2. We distinguish originally three classes: 1, no connecting vowel in the preterit; 2, connecting vowel and short stem; 3, connecting vowel and long stem.
- 3. There was very early (in O. II. G.) a levelling between the 2. and 3. classes, because in short-stemmed verbs, in which no syncope could take place, i(i) caused doubling of the final consonant. This made them appear like long-stemmed ones. The first class has now been reduced to the three verbs benfen, bunfen, and bringen, see 119, 2. Compare O. H. G. denken, dåhta, gidåht; dunken, dåhta, gidåht; bringen, bråhta, gibråht Long â < a nasalized < an. brauchen, fürchten, suchen, wirfen (< würken) belonged here also. Eng. buy, bought, bought; work, wrought, wrought show still their origin in the gh before t. Bringen is of course a strong verb and so are brûkan (II.), suchen (VI.) as their ablant shows. Beginnen belonged here perhaps too, since we find still in dialect begonnte (F. 3176). That these verbs never had any connecting vowel is shown: 1, by the change of the guttural stop > guttural spirant which takes place only directly before t; 2, by the umlaut in the pret. subj. For the M. H. G. forms are denken, dâhte-dæhte, gedâht; dünken, dâhte-diuhte, gedâht; bringen, brahte-brahte, (ge)braht. bunten, bunte, gebunft begins as early as M. H. G. The present mir bäucht is a N. H. G. formation from the That fürthen once belonged here is shown by the archaic form "furchte," e. y., Der wad're Schwabe forcht' fich nit (U.). Lessing has "furchte," < O. H. G. furthen (vürthen), for(a)ta, gifor(a)t (the a is a secondary development).
- 455. The verbs in 119, 1, are the only verbs that still show the difference between the long and short-stemmed of the i(j)-class. They formed their principal parts in O. H. G.: brennen, branta, gibrennit—gibrantêr; nennen, nanta, ginennit—ginantêr. According to syncope *brannita, *gibrannitêr had to become branta, gibrantêr. The i that produced umlaut in brennen.

gibrennit had disappeared from brannita, gibrannitêr and therefore there is no umlaut in brannte, gebrannt. The participle with umlaut was levelled away.

- 1. The umlaut in the modern pret. subj. is due to analogy with brächte, burste, etc. It is a Middle German seature. Even preterits indicative with c of remen, bremen, nennen occur now and then in the classics. The levelling into senden, senden, senden, wender, gewender is not uncommon. Schiller has . . . die Grenze, wo er das von den Schweden eroberte Cham berennte.
- 2. All other differences were levelled away, e.g., M. H. G. hæren, horte, gehæret—gehort, becomes hören, hörte, gehört; fürchten, fürchtete, gefürchtet; sprengen, sprengte, gesprengt; füllen, füllte, gefüllt; beden, bedte, gebedt.
- 3. A few isolated participles are left, such as gestalt (ungestalt), getrost (adverb), and others.

STRONG VERBS.

456. The Present.

- 1. The interchanges of e-i; ie-eu; no umlant—umlant in the present and the umlant in the pret, subj. are accounted for in the phonology. See **403**. See also under each class of verbs.
- 2. The first p. sg. has followed the analogy of the forms that have c and of the verbs of VI. which had of course no umlaut in 1. p. sg., e.g., O. II. G. faru, ferist, ferit. The contrast is now for all classes between 2. and 3. pers. sg. with i, ä, etc.: bu fährst, er fährt, bu gibst, er gibt and all the other forms with a and c: sahren, ich sahren, ihr sahren, ihr sahren, ich geben, ich geben, ihr geben, ift geben. Formerly the contrast was between the whole pres. sg. and the whole pl. for Cl. III., IV., V. See paradigm, p. 203.
- 457. Of the numerous formations of the present-stem the following are still to be recognized by certain peculiarities:
- 1. I. E. jo—je, L. capio, fugio, German bitten V. < bidjan < *bedjan according to the interchange of e—i, but the participle general < bedan—. Exactly like this fiften V., liegen V., but gefessen, gelegen. Also heren VI. and howeven VI., e.g., sower < swerien < swerien, swor, swor, sworen—. Hence i, or in the last two, a umlant through the whole present. This was once a large group. Here belonged for instance the class bensen, bachte, see 454, 3. + Go. thankjan.
- 2. The suffix -n (-nw, nj), which also entered the pret. if it was within the root. fragen < *frehnan, Ags. frignan, but already weak in

- O. H. G. ermähnen < an O. H. G. (gi)-wahhinnen, nn < nj. beginnen, rinnen and others have nw. Go. standan, German stund, stand—gestanden; (geben), gieng, gegangen, sangen, etc. Compare L. tundo, tutudi.
- 3. Reduplication, corresponding to Gr. $\tau i\vartheta \eta \mu \iota$ and $\pi i\pi \tau \omega$, is preserved in beign < bibên, to quake, and jittern, to tremble, both weak (Kluge).
- 4. sk, corresponding to L. -sco, in breschen, forschen, munichen, muschen (see Kluge's Dict. for these words).

458. The Preterit.

- 1. Reduplication. There are traces of ablant without reduplication, but generally the two occurred together. In Gothic are still verbs which have both. The reduplication consisted in the repetiton of the initial consonant + e or if beginning with a vowel by prefixing 'e, e.g., Go. haldan, haihald (ai = ĕ in Gothic), aukan, atauk. O. H. G. has only one clear example, viz., teta, th that. Compare L. fallo—fefelli, tango—teligi. How the reduplicating syllable was lost, how it coalesced with the stem is not yet clear. Our VII. class includes the reduplicating verbs, that is, those still reduplicating in Gothic, though it is by no means certain that Gothic has preserved the original method of reduplication.
- 2. In O. H. G. the stem-vowel of the reduplicated preterit appears as \bar{e} and eo, e. g., $r\hat{e}tan \ r\hat{e}t$, $f\hat{e}tan \ f\bar{e}ng$ and $f\tilde{e}ng$ (fahan < fanhan). \hat{e} by diphthongization > ea > ia > ie; eo > io > ie, so that already in M. H. G. we have ie as the regular vowel of the preterit. Examples: $st\hat{e}_{z}an$ steez, stiez, M. H. G. stiez— $gist\hat{e}_{z}an$; hloufan hleof, hlief, M. H. G. lief—githoufan, N. H. G. laufen—lief—getaufen; fallan—fiel > feal > fiel (M. H. G.)—gifallan, N. H. G. fallen—fiel—getaufen; heizzan— $h\bar{e}z$, heaz, hiaz, M. H. G. hiez—giheizzan, N. H. G. feifen—fiel—getaufen; fallan—fiel—
- 8. However the vowel appearing in the pret, may have arisen, it is not ablaut. It never appears in derivatives as all the ablaut vowels do. Unterficield is only a seeming exception, since it stands for the older "Unterficiel", which was crowded out, because the verb went over into the I. Cl.

The Ablaut-series and the Verb-classes.

459. No one verb shows all the four stages of ablant as they have been determined. See **394.** The first five classes belong to the original I. E. e - o series, the VI. is the I. E. a - a, G. T. a - o series. To the latter series belong also the reduplicating verbs which have in the stem a + liquid + cons. (halten); ai (ei); and au, o.

In the first group \ddot{e} corresponds to G. T. \ddot{e} , \dot{i} ; o to G. T. a in the pret sg., for in I. and II. we must count \dot{i} and \dot{u} as consonants. The five classes can be grouped as follows:

1. a. I., II.: i and u as consonants in the pres. and pret. sg.; as yowels in the pret. pl. and part., viz.,

$$\ddot{e} - i + cons.$$
 $a - i + cons.$ $i + cons.$ $\ddot{e} - u + cons.$ $a - u + cons.$ $u + cons.$

The stem ends in i or u + cons.

- b. III., IV., V. have in the present $\ddot{e} i + \text{liquid or nasal} + \text{cons. (III.)};$ e + liquid or nasal (IV.), or e + cons. (V.). In the pret. sg. they have a. The stem ends in a liquid or nasal + cons. (III.); in a single liquid or nasal (IV.); in a single cons. not liquid or nasal (V.).
- 2. I., II., III. have the weakest stages of ablaut in the pret. pl. and participle; IV. in the part. only; V. in neither. IV. and V. have a long vowel in the pret. pl., that is very difficult to account for. O. H. G. ā corresponds to G. T. ē, the length of which may be due to compensation, e.g., *gégbum > gêbum. See 458, 1.
- 3. A third grouping is possible according to the quality of the vowel, viz., I. to V. run in a system of unrounded vowels, VI. runs in a system of rounded.
- a. it (o) in II. is either consonant in the accented stage (pres. and pret. sg.) or vowel in the unaccented stage (pret. pl. and past part.). u before r, l, m, n in the unaccented stage is also due to their double nature, according to which they serve as vowels or as consonants. Nasalis and Liquida sonans (Brugman) are represented in all the Teutonic dialects by ur, ul, um, un, a characteristic of the whole group.
- 4. VI. stands alone and contains rounded vowels. Its a cannot have been originally the same as the a of the other series. It was probably more o than a.

LEVELLING IN THE PRETERIT.

- 460. Tracing the classes from O. H. G. to N. H. G. we have to notice one great levelling in all the classes, viz., of sg. and pl. pret. This was started by VI. and VII., which had sg. and pl. alike. In IV. and V. the difference was only one of quantity. The sg. was short and the pl. was long. The sg. had to take a long vowel according to 488, 2.
 - 1. In Cl. II. G. T. au > ao > ô before dentals, before l, r, h, and finally

There were therefore already o's in the pret. sg. The levelling was in favor of \ddot{o} , but of \ddot{o} before certain consonants (if, d_0 , f, b - t). \ddot{o} was already in the past part. < N. Only I. and III. are left. But in I. 1 > ei according to 488, 5. The pres, and pret, had to become alike. The principle of ablant was thus interfered with in I., and the levelling in the pret, was in favor of the pl. and part., viz., i or ie according to the following consonants. III, is the only class in which the levelling was in favor of the pret. sg. Before nasal + cons. u stood in the pl. and part. A levelling in favor of the pl. was therefore not likely. In IV. and V., where such a levelling occurred, the pl. and part. had different vowels. Before l, r, + cons., to be sure, there was u in the pl., o in the part., but u - o stood in no ablaut-relation. But this levelling was the latest of all and we find none in S. G. dialects at the present day. In the written language of the 16th and 17th centuries it is rather rare; in the 18th it is the rule with not a few exceptions. Berben, warb - wurde, geworden is the only verb of III. in which the pl.-vowel stands by the side of the sg. But this verb stands isolated from the rest as an auxiliary verb. The pret.-pres. verbs have not suffered levelling except follen (see 471, 2), but these have stood in an isolated position toward all the other strong verbs from prehistoric times.

461. We give a few examples of the classes in their earlier stages. Space will not permit to trace each verb of each class. It would be easy to show what verbs have died out, what verbs have become weak, and what weak or foreign verbs have become strong. The stock of verbs belonging to each class varies with every period; in fact, it is ever varying. Compare, e.g., jag, jug, frag, frug VI. (see 129), and the large number of doubtful ones in VIII.

462 .	I. Cl.	O. (M.) H. G.	î	ei, ĉ	i	i
_	rîfan reifen	greif griff		griffen griffen	–grifan gegriffen	
	han ihen	zêh zieh		zigum ziehen	–zigan geziehen	
	nîdan meiten	sneit jánitt		snitum schnitten	–snitan gejdynitten	

1. The interchange of h—g, d—t according to Verner's Law, see 416. î > ei according to 488, 5. N. H. G. ĭ in the whole pret. by levelling ei > ê before h, r, w. î represents both the medium stage G. T. ëi and the weak stage î. ĭ is the zero stage.

463.	II.	0.	H.	G.	iu — io	ou, ô
------	-----	----	----	----	---------	-------

triofan	trouf	trufum	-trofan
triefen	troff	troffen	getroffen
kiosan	kôs	kurum	-koran
fiesen, füren	tos, for	(er)foren	erforen
siodan	sôt	sutum	-sotan
sieden	fott	fotten	gesotten
sûfan	souf	\mathbf{sufum}	-sofan
faufen	foff	foffen	gesoffen

- 1. The interchange of iu io according to 406; iu in the pres. sg. triufu, triufist, triufit, but pl. triofames, etc., inf. triofan. For a period this iu, having passed > ü, became cu by diphthongization. These forms are now archaic, ie prevailing through the whole present, see 124. M. H. G. io > ie. G. T. au > ou, but > ao > ô before dentals, l, r, h and finally. The interchange of s r, d t according to Verner's Law, but levelled, as in schneich I., in favor of t, in the whole preterit. In M. H. G. kiesen, kos, korn, gekoren for a while, but later, tiesen, soe, geforen; fiesen, for, geforen; See 132.
- 2. In this series all the four grades of ablant are represented. on strong; io, in medium; û the weak; ĭ zero. û > an regularly. û appeared in verbs that had the accent on the suffix. Compare 457.

464. III. Cl. O. (M.) H. G. ë—i ă ŭ—ŏ

i, a, u before nasal + cons.; e - i, u - o before r, 1 + cons.

swimman	swam	swummum	–swumman
schwimmen	fd/wamm	fdwammen	geschwommen
fintan	fant	funtum	—funtan
finten	fand	fanten	gefunden
hëlfan	half	hulfum	–holfan
helfen	half	haljen	geholfen

1. This is in N. H. G. the most primitive series. finden, fand, gefunden is already the G. T. series. In the second group (see 125, 2) the secondary

transition of u>o is a M. G. feature. It takes place before nn and mm. The older transition from u>o before l, r+cons is already O. H. G. See 405.

- 2. The interchange of \ddot{e} i is regular (see 403). It appears in III., IV., V. alike.
- 3. The double preterit subjunctive (see 125) is due to the levelling of the indicative. The subjunctive was regularly formed with the vowel of the pl. and umlaut of the same. Now when the vowel of the sg. spread over the pl. it is natural a new subjunctive should be formed also by umlaut: fănbt, bărgt. Wherever the new pret. subj. in ă did not approach too closely to, or coincide with, the present ind., it prevailed as in the first division: finbt—fănbt, binbt—bănbt, gelingt—gelăngt. Where such a coincidence was the case, the old subjunctive is still in use and preferable as in the third division: berge—(bărge) bürge, sterbt—stürbt, werbt—würbt, see 126. Beschlen and empschlen of IV. belong here since in M. II. G. they were berelhen, enpselhen, containing 1 + cons. steblen IV < steln has followed the analogy of III., 3, on account of stăște, the regular subj. and steble the pres. ind. The 2. division has ö for older ü just as it has o for u: gewünne > gewünne, but the new ones in ü are quite common except of rinnen, on account of rennen.

4. \ddot{e} —i is the medium stage, a the strong; the weak and zero appear as u—o.

465. IV. Cl. O. (M.) H. G.	ë—i ă	ā	ŏ
stëlan	stal	stâlum	-stolan	
stehlen	stahl	stahlen	gestohlen	
koman, quëman	quam	quâmum	-koman	
fommen	tam	famen	gekommen	

- 1. Here is again interchange of $\ddot{\mathbf{e}} \mathbf{i}$, $\ddot{\mathbf{a}}$ prevailed in the pret. $\mathbf{u} > 0$ regularly.
- 2. Queman > koman according to 489, 1. It is possible that "koman" is the weak grade (see 471, 2). Studen belonged originally to V.; it has no liquid. Before d and ff the vowel is short, except in the pret. of course: Stone, State, attoors.

466 .	V. Cl. O	. Н. G. ё	ă ā	e
_	ëban	gab	gâbum	–gëban
	eben	gab	gaben	gegeben
	zzan	âz, az	âzum	–ëzzan
	Jen	aß	aßen	(ge)gessen
	itten	bat	båtum	–bëtan
	tten	bat	baten	gebeten
	rësan	was	wârum	–wësan
	rin)	war	waren	gewejen

1. In \ddot{e} the three lowest grades are represented, there was no liquid or nasal to represent the 3 and 4 grades. \ddot{a} is the strong stage. The origin of \ddot{a} is not certain. \ddot{a} z is perhaps from eaz, 'e being the reduplicating syllable. For bitten, see 457, 1. In the part, the interchange of s-r was levelled away after the inf. as early as O. H. G.; in the pret, with the levelling of the vowels. But is archaic in Feuchtersleben's: So (if) bir griftent cin Knößlein was. Interchange of \ddot{e} is a usual and quantity of \ddot{e} depends upon the following consonants.

467 . V	I. Cl. O. H	I.G. a—o	uo, ô	uo, ô
	faran	fuor	fuorum	–faran
	fahren	fuhr	fuhren	gefahren
	heffen	huob	huobum	-haban
M.H.G	. heben	huop	huobum	-haben
	heben	hob, hub	hoben, huben	gehoben (er)haben

1. This series has only two grades, strong and weak-medium, see 400. G. T. $6 > u_0 > \bar{u}$. For e in heffen, heren, see 457, 1. For a > 0, see 489, 3.

468. VII. Cl. Its verbs do not form an ablaut-series, see 458.

469. VIII. Cl. Its verbs have mostly o for \check{a} , \bar{a} in the pretand the majority belong to III., IV., V. Some of these were unsettled very early, e. g., M. H. G. pflegen IV. and V. For 4 > 0, δ , see 489. 3.

The Preterit-Present Verbs.

- 470. In these the meaning admitted of the perfect being used as a present. They are a primitive class. Compare Gr. olda, ldμεν, Lat.odi, novi. With a few irregularities they can yet be assigned to the regular ablautseries as has been done (see 135). Weak preterits were formed without connecting vowel. Therefore umlaut in the subj. The stem-vowel is the same for the old pret. pl., the new preterit, the participles and the infinitive. The participles (see 453, 1) were formed either weak or strong, generally weak. Since the infinitive is a new formation as well as some of the strong participles, and since as in gan—gunnen (günnen) the strong participle was formed before there was an infinitive, it is hardly correct to say the infinitive is used instead of the part. in modern German: cigen, O. H. G. gawizzan, M. H. G. gunnen, gegunnen, (er)kunnen are strong participles. The others, bürfen, fönnen, mögen, follen, were formed later. No doubt, participles like heizzen, lâzen, etc. (see 453, 2), had their influence in the non-use of ge-. Eng. has formed no infinitive.
- 1. The inflection of the present is that of the regular strong pret. They have even one very old feature, viz., in 2. pers. sg. t is used, the secondary ending, while in all other strong verbs the optative has entered the indicative, e. g., nâmi, but tarst (+ durst) darft, scalt (+ thou shalt), maht. st in canst, anst is a mystery. This t still occurs in the 16th and 17th centuries, bu folt nicht stellen (B.).
- 471. 1. O. H. G. weiz wizzum I. corresponds exactly to Gr. olδa ἐδμεν, in ablant and consonants.
 - 2. scal, scalt (2. pers. sg.), sculum, scolta IV.

It is possible that sculum is older than the long vowel of IV. ("stâlum"), for it may be the weak grade of ablaut, like -boran, sûfan.

8. O. H. G. muosa and muosta muoz muost muozum M. H. G. muoz muost müezen muose, muoste subj. müese, müeste N. H. G. muß. mußt, müffen, mußte, müßte.

Of the double form muose - muose the former is the older and regularly developed. muose < *môt-ta, muose has the suffix added once more. The umlaut that appears in M. H. G. and later in the pres. pl. and inf. is difficult to account for.

- 4. foll < schol < schol < scal. Why f < foll? Compare O. and M. H. G. skal sal, but always South.
- 5. gönnen III. and taugen II. have become weak. They come respectively < gan-gunnen, in which g- is prefix, and < touc-tugen, to be fit, + Eng. do in "it will not do," "how do you do" (?).
- 6. eigen + own < eigan is the strong part, of a stem of which there appears only a pl. aigum in O. II. G. g according to Verner's Law. It belongs to the a â ablaut-series like heizzan hēz giheizzan. tar turren + dare has disappeared. Its meaning has passed into barf bürien.
- 472. 1. Notice that Eng. must is really a double pret.-pres. verb. must is the weak preterit used again as a present. must < weste, see 489, 1. Compare Eng. to wit, wist, wot. See Skeat.
- 2. O. H. G. wili wilt, wili, pl. wellemês, wellet, wellent, pret. welta, inf. wellan. o appears for e already in this period (see 489, 1). M. H. G. 2. pers. sg. is wilt, wil. N. H. G. willft. This is really no pret.-pres. verb, but we have according to custom put it at the end of this class. It is really a mi-verb, whose ind. was lost. Compare L. velim.

Mi-Verbs.

473. fein.

- 1. O. H. G. bim, bis(t), ist, birum, birut, sint. Subj. sî, etc. Inf. sîn, wësan V. Imp. wis, wesat, sît; pret. was; subj. wâri. In M. H. G. the pres. pl. runs: 1. p. birn, sint, sîn; 2. p. birt, sît, sint; 3. p. sint, sîn. In N. H. G. wir fint < the 3. person; the fetd < the subjunctive; ste sint is primitive, comp. L. sunt, sint.
- 2. Three stems have helped to form its conjugation, viz., \sqrt{es} , \sqrt{b} 'x-, 1.. fui, Gr. $\phi i \omega$, and the verb $w \bar{e} s a n$. It would lead us too far to enter mixutely upon the part each plays, but the development is not at all difficult to trace. Only r in birum, birn is a mystery, but it appears also in the reduplicating verbs of VII.
 - 474. gdn, gdn, gangan, geh n, + go.
- 1. O. H. G. gâm, gâs, gât, gâm, gât, gânt; gêm, gês, gêt, gêt, gêt, gênt; the subj. only gê, gês, gê, etc. Imp. ganc, gât, gêt.

- 2. The verb gangan is of VII. The relation of \hat{a} to \hat{e} is not clear. Kluge has shown that $g\hat{e}n$ is compounded of ga (prefix) + \sqrt{i} , L. ire. Then $g\hat{e}m$ < ga-im, $g\hat{e}s$ < gu-is, etc. See his Dict.
 - 475. stán, stên, stantan, ft e h n, + stand.
- It inflects just like gên. standan, stuont gistandan according to VI. A past participle gestân occurs also.
- 2. Both gangan and stantan show a secondary stem and a present-formation with n (see 457, 2), which n also entered the preterit and the other forms.
 - 476. tuon, thun, + do.
- 1. O. H. G. tuom, tuos, tuot, tuom, tuot, tuont; subj. tuo, tuos, tuo, tuom, tuot, tuon; pret. teta, tâti, teta, tâtum, tâtut, tâtum; subj. tâti, tatîs, tati. M. H. G. subjunctive with umlaut. Past part. gitân.
- 2. teta is the pure reduplicated perf. to + ta, the stem. The pl. in \hat{a} is probably ablaut of the almost lost series L-E, \hat{c} \hat{c} , O. H. G, \hat{a} uo. Comp. Gr. $\rho \hat{\eta} \gamma \nu \nu \mu$ $\hat{\epsilon} \rho \rho \omega \gamma a$. N. H. G. that < M. H. G. tet is archaic and has a curious spelling as if it were subj.

C. HISTORY OF THE LANGUAGE.

477. "German" belongs to the Germanic or Teutonic group of languages, which again is a member of the Indo-European group. To the latter belong the following: the Aryan (Sanskrit, etc.), the Iranic (old Batric and Persian), Greek, Latin, Keltic, Slavic, Armenian, Germanic, and perhaps as a separate member Albanian. Whether the Germanic languages are more intimately related with one member than with another is considered very doubtful by most authorities, though some think Slavic and Germanic so related.

478. Characteristics of the Germanic languages:

- 1. Grimm's Law with Verner's Law (see 407-416).
- 2. The double verb-inflection, one by ablaut, the other by composition. The suffixes -da, -ta in the weak preterit are quite peculiar. The tenses have been reduced to two. The future and the subjunctive (see **448**) are lost.
- 3. A certain "law of finals" showed itself in General Teutonic in the consonants, but the "law of final vowels" belongs entirely to the individual dialects. For instance: I.-E. *b'eroit* became G. T. *beroi, Go. berai (e written for Go. ai). N. sg. masc. o-stems: G. T. *dagoz, Go. dags, Scand. dagr, Ags. däg, O. H. G. tac.
- N. sg. fem.: I.-E. $*geb\hat{a}>G$. T. $geb\hat{o}$, Ags. giefu, but by levelling of Acc. and Nom. O. H. G. geba.
- 4. The limitation of the accent to the stem-syllable was probably General Teutonic, though Verner's Law shows that the Indo-European accent was preserved until the surd spirants in the unaccented syllable became sonant. Gr. $\pi a \tau \eta \rho$ shows I.-E. accent, but G. T. $fath \dot{a}r > Go$. fudh ar > fadar > O. H. G. fater.
- 5. The spread of the n-declension, which in German is still going on. See 428, 2. The locative case is lost.
- 6. The double adjective declension. The other I.-E. dialects decline adjective and substantive alike. The Germanic has, 1, a strong declension made up of substantive and pronominal case-endings; 2, a weak declension identical with the n-declension of substantives. See 437.

Classification of the Germanic Languages.

- 479. The following is in our opinion the best classification.
- I. East Germanic, viz., Gothic, the language of the Goths, who once probably occupied European Russia. The chief literary monument is part of the Bible translation made for the Westgoths by their bishop Ulfila (A. D. 310—381). The manuscript is of the sixth century.
- a. In comparison with Anglo-Saxon and O. H. G. the language is "simple," but in spite of the great age of its literary monuments, it should be made the basis for the comparative study of the group only with great caution.
- II. THE NORTH GERMANIC OF SCANDINAVIAN LANGUAGES. Two groups: East-Scandinavian, viz., Swedish and Danish; West-Scandinavian, viz., Norwegian and Icelandic. Earliest literature of East-Scandinavian of the fourtheenth century consisting of laws. Runes of the 5. (!) century. Rich literature of West-Scandinavian on Iceland, colonized by Norwegians, of the 12th century and earlier. The literary language of Norway, Sweden and Denmark is East Scandinavian. Norwegian exists only in dialects. Icelandic is the official as well as the popular language of Iceland.
- III. WEST GERMANIC DIALECTS. English was very early isolated from the rest of the group, being the language of the early colonists in England, who were mainly Frisians, viz., Angles, Saxons and Jutes. The Frisians emigrated from their old homes on the coast of the North Sea from the river Scheldt to the river Eider in Schleswig. The Jutes lived to the north of them. This settlement continued during the 5th and 6th centuries. In the 9th the Danish conquest occurred and in the 11th the great Norman conquest, which gave to English that great influx of Romance words and removed it still more from its cognate dialects on the continent. Literature beginning with the 7th century. Runes, Beowulf, Cædmon, etc.
- a. The oldest dialects are, 1, Anglian, incl. Northumbrian and Mercian: 2, Saxon, the chief is West-Saxon; 3, Kentish.
- 480. The Continental West Germanic dialects are divided according to Grimm's Law. The North and East-Germanic, and English only underwent the first shifting, that is, the General Germanic (Teutonic) shifting. The continental dialects shifted again, some more, some less.

Classification of the German Dialects.

- 1. The Low (or North) GERMAN shifted only th > d, compare Engl. "the" Low German "de".
 - 2. The MIDDLE GERMAN shifted much more.
 - 3. The South German (Oberdeutsch) shifted most of all.
- a. "High German" if it is to translate "Hochdeutsch" is ambiguous, since many still make "hochdeutsch" include "Oberdeutsch" and "Mitteldeutsch." Nieder (low), Mittel (middle), and Ober (upper, south) refer to the geography of the country only.

481. I. THE LOW GERMAN DIALECTS.

- 1. Frisian. Though the literature is only of the 15th and 16th centuries, the language shows a stage at least some 300 years older. Its territory (see 484) has been largely encroached upon by Low Saxon and Frankish. It embraces still the northern provinces of Holland (West Frisian); Oldenburg and the Hanoverian county of Ostfriesland (East Frisian); North Sleswic with the islands off the western Sleswic-Holstein coast (North Frisian). But the modern dialects of the region described are strongly influenced by Low Saxon.
- 2. Low Saxon. Earliest literature the Heliand of the 9th century. Territory very large.

Draw a line from Düsseldorf to Cassel curving slightly southward; from Cassel to Quedlinburg to Posen and to the boundary of the empire. All that is north of this, except Frisian and Slavic in East Prussia, is Low Saxon. Two thirds of its territory is colonial, however. The Slavic conquests from the 6th to the 9th centuries had their western limit in the following line: Klel, halfway between Brunswick and Magdeburg, Naumburg, Coburg, Linz, Klagenfurt. What is east of it is colonial for the German language, either for Low, Middle, or High German. About half of Germany and three fourths of Prussia therefore are on once Slavic territory.

- a. Frisian and Low Saxon together are now often called "Plattdeutsch," which even in our day can boast of a poet, Klaus Groth (Holstein dialect), and of such a capital novelist as Fritz Renter (Mecklenburg dialect) who died a few years ago.
- 33. Low Frankish. Literature: oldest the Lex Salica, very badly preserved, and fragments of a translation of the Psalms. Of the 12th century the "Eineide" by Veldeke, and in the 13th a very rich literature in Holland and Brabant. Territory: Holland (Dutch crowding out Frisian), the northern half of Belgium (Flemish), and the northern part of the Prussian Rhine Province. Dutch is now the only Low German literary language. Attempts are making to revive Flemish.

482. II. MIDDLE GERMAN.

For this group draw about the following line, which will separate it from the South German dialects: From Nancy (but this is French) across the frontier wich a curve north of Strassburg to Rastatt in Baden, through Heilbronn to Eichstädt, then north to Eger, from there directly eastward, but Bohemia is Slavic, of course.

Beginning in the west we have then:

- 1. Middle Frankish (according to Braune). Its territory consists chiefly of the Rhine Province, whose centre is Cologne. Very little literature.
- 2. South Frankish and Hessian. South and west of 1, and north of South German line. The eastern limit would be a line drawn from Cassel to Heilbronn. A rich and old literature: Isidorus of the 8th century. The great gospel harmony of Otfrid of Weissenburg. The Ludwigslied and much more.
- 3. East or High Frankish. East of 2. Eastern limit is the S. G. line from Eichstädt to Eger and a line from Eger to Cassel. Its old literary centre was Fulda. The larger monuments are Tatian, and William's paraphrase of the Song of Songs, about the year 900.

The next three are almost entirely on colonized territory, viz., 4. Thuringian, north of 3 and south of the Low German line; 5. Upper Saxon, chiefly the present kingdom of Saxony; 6. Silesian. 5. and 6. are east of the rest, but do not extend to the boundary of the empire, since there is a long stretch still Slavic, though with German written language. Their literatures belong to the M. H. G. period.

483. III. SOUTH GERMAN.

The southern limit towards the Romance dialects would be, roughly speaking, a line drawn from the lake of Geneva eastward to Klagenfurt in Austria and beyond, then directly north through Pressburg to Brünn. The eastern boundary is the Hungarian, the northeastern the Slavic of Bohemia and Moravia.

1. Alemanic, divided into: a. Alemanic proper, covering Alsace, the larger part of Baden and Switzerland. b. Suahian, covering the larger part of Würtemberg and Suahian Bavaria. The eastern limit would be a line from Eichstädt to Füssen. The literary centre was St. Gallen. Abundant literature of the 8th and 9th centuries. The "Benedictiner Regel." The Paternoster and Credo of St. Gallen. Vocabularius St. Galli. Murbach Hymns. "Christ and the Samaritan woman." The extensive works of Notker.

- 2. Bavarian-Austrian, covering the larger part of Bavaria and non-Slavic Austria. The oldest of all Old H. G. is the Glossary of Kero (740); the Glossary of Hrabanus Maurus; the so-called "Exhurtatio" and the poem Muspilli, besides smaller pieces.
- 484. It is impossible for us to give here a description of the phonology of these dialects. Besides Grimm's Law the long vowels and the diphthongs are the chief criteria for their classification. Their territories have not remarkably changed. Note that Frisian has been driven out of Holland by Dutch and in Germany it leads a very precarious existence upon the islands off the coast of Hanover and Oldenburg, having been crowded out by "Plattdentsch." Low German has also encroached upon Middle German territory in northeastern Germany. The only scientific description that we have of any modern dialect is that by Winteler of the Kerenzer dialect (Swiss-Alemanic).

History of German.

- 485. In point of time we divide the history both of the language and of the literature into three periods, viz., Old High-German till 1100; Middle High German till 1500; New High German since then, perhaps better till about 1800, because the literary language of the 18th century is already taking on an archaic character in comparison with the language of the last fifty years. See 487, 3.
- 1. The literature of the O. H. Q. period is entirely dialectic and clerical. We have one poem, unfortunately only fragmentary, the *Hildebrantslied*, that goes back in matter and meter to the period before the introduction of Christianity.
- 2. There has been much contention, whether there was a standard written language in the M, H, G, period. Lachmann and his school maintain that there was and that it died out with the decay of literature in the 14th century. But the opinion is losing ground. The reasons against are well stated in Paul's "Gab es eine mittelhochdeutsche Schriftsprache?" The literature was mainly lyrical and epic. Its climax falls in the 12th century. The chief differences between the O, and M. H. G. periods are: 1, the spread of umlaut; 2, the weathering of unaccented and inflectional yowels to mere e.
- 486. With the N. H. G. period begins the written language that became not suddenly, but gradually the standard literary language of Germany. In phonology it agrees with that of the East Frankish dialect, which is the M. G. dialect that is most closely related to S. G.—Its territory was in

the very centre of Germany. Both this position and this relationship are two elements that help to account for its spread.

- 1. From this same centre started the Reformation. Luther's share in the establishment of the written language is generally not well stated and even overrated. Fourteen translations of the Bible had been published up to 1518 in H. G. alone, made from the Vulgate. The language was based upon the "Kunzleisprache," i. e., the "official" language in which emperor and princes published decrees and laws and in which all government business was transacted.
- 2. There were at first several of these "Kanzleisprachen," differing more or less. We find traces of them as early as the 14th century. Those of Austria, Bohemia and Saxony were first amalgamated. It was this language that Luther used in his Bible translation, moulded by him, of course, as every man of genius will mould his mother-tongue. Luther, by birth a Middle German, had come in contact with people of all stations, speaking Low and South German. No Bible, the circumstances being the same, translated into strict South German would and could have been accepted by North Germany. Again Luther had sprung from among the people and had a most hearty appreciation of folk-lore and all that is "volkstümlich," of proverbs, saws and songs. This made him a translator for the people. The proverbs of Solomon and the psalms are without doubt the most taking portions of his translation.
- 487. The spirit of the Reformation was one roused from the lethargy of the preceding centuries and ready for something new. Luther's New Testament appeared in 1522, the whole Bible in 1534. Besides the Bible the catechism, hymns, sermons and the numerous polemical pamphlets were written and read in the new language. With the Reformation began also the public school ("volksschule") and the first grammars and "formelbücher" appeared, written often by the lawyers, who, of course, favored the "Kanzleisprache." But last and foremost of all the invention of printing, some fifty years before the Reformation, made a common language possible.
- 1. The clerks would write and spell as they spoke, i.e., according to their own dialect. Printing brought about a certain uniformity in the orthography. It spread the language to the most different parts of the country. About the year 1600, books were already cheap in comparison to the costly manuscripts. In 1523 a Bible was printed at Bâle, which had as appendix a sort of dictionary explaining the terms unfamiliar to the Swiss.

- 2. The struggle of the new language was hardest in Switzerland. Both Catholic and Calvinist objected to a Lutheran language. In North Germany it was favored by the fact that the whole North became Protestant en masse. Yet hymns were printed there in Low German for a long time. In the 17th century High German preachers came to the North. But through printing the writings of one man exercise a great influence upon the speech of his readers. Printing in fact has introduced into the development of language a certain stiff, artificial element that the written, and especially the unwritten, dialects do not have. The printed language has more of a fixed, stereotyped character than dialect. But on the other hand we must remember that the letters of the alphabet are not the language. They are only contrivances that represent speech very imperfectly, contrivances invented several thousand years ago, which we try to apply now to that most subtile institution—language, that has been changing and developing ever since.
- 3. The language of the 19th century differs not a little from the language of the 16th. The differences in forms and functions have been treated to some extent in Part I. The 17th century is a dark gloomy page in the history of Germany and almost a blank in its literature. In the first half of the eighteenth we see the beginnings of the classical period. Until then Latin was the language of the learned, and in the 17th and 18th centuries there was a large number of foreign words both in the written and spoken languages that were never assimilated, but driven out again by a school of literary men that started a revival of the love of old German.

The following are the more important and far-reaching soundchanges in the transition from M. H. G. to N. H. G.

488. A. VOWELS.

1. The further spread of umlaut by analogy (levelling).

Ex.: as a sign of the plural, see 48; in derivatives as in: glaubig, vateralid, brüberlich, Brüberhen, Töchterlich; in long-stemmed weak verbs as in: hören, hörte, gehörter (see 455, 2).

2. The lengthening of short accented stem-vowels in the open syllable, and of a and e before r, rt, rd. To this process the largest number of the present long vowels is due.

Ex.: Bogel, hof — hofes; gebären (< börn), gewähren, leben, weben, sehen; hahn—hahnes; Thür, mir, wir, er, ber (demonstrative), bar (but börsuß); herb, werde, wert, zart, Bart. Ur in the sense of "great" as in : Urgroßvater, otherwise short or long: Urlaub, Ursprung, but Urteil is always short. —art and—arz are unsettled still. Compare harz, Wärze.

a. The short vowel is retained before more than one consonant and in a closed syllable, except before r (rt, rd). Ex.: hoffen, voll, rennen, hoffe, wollen, fait, etc., but mir, wir, as above.

b. This point of N. H. G. phonology is by no means all cleared up. Paul is the only one that has thrown any light upon it. See P. and B. Beiträge, VII. p. 101-. When through infectional endings the stem-vowel is now in an open, now in a closed syllable, the standard pronunciation demands levelling in favor of the long vowel of the open syllable. For instance, tas Glas, Glafes, Glafes, Glafe, Glafer, all with long stem-vowels. In N. G., however, Glas, Gras, Zag, Zob, (N. and A. sg.), are always short according to the law of short vowel in a closed syllable. N. and S. G. agree in the levelling between the sg. and pl. pret. of ablant-series, IV. and V. in favor of the long vowel of the plural, e. g., gab—gaben, fab—faben.

c. This principle may be stated in another way: N. H. G. makes a M. H. G. accented syllable containing a short vowel long, either by lengthening the vowel or by lengthening, i.e., "doubling," the consonant, particularly if that consonant be t or m, and if a single consonant is followed by cr, cl, cn.

Ex.: Statte, Sitte, fommen, Sommer, Better; in the pret. and past part of the I. and II. ablaut-series: sanit — gesonitten, sott — gesotten. This change began in the M. II. (1. period, starting from L. G. it spread over M. and over S. G. as late as the 16th century.

- 3. Long accented vowels are shortened before more than one consonant.
- a. This process is not far-reaching, but includes also the long vowels sub 4, that have sprung from diphthongs. It started with the M. G. dialects.

Ex.: cot L. G., see **493**, 4, < *chaft*; bachte, brachte (see **454**, 3). Not < *dhte*; herr, herrschen; horden; sing, hing, ging < flenc, hienc, giene; vier in the compounds vierzehn, -zig, viertel, etc., Mutter < muoter.

4. The simplification of the diphthongs ie $> \bar{i}$, still spelt ie; uo $> \bar{u}$; üe $> \bar{u}$ long.

Examples very numerous: Blut < bluot; Mut < muot; Güte < güete; füß < sueze; führen < vüeren; blühen < blüejen; lieb; tief; always in the

preterit of Class VII. and in the present of Class II., viz., rict, fiel, bicten, fieben, but see 3.

- a. This also is a M. G. feature that was fixed upon the "Schriftsprache," showing itself as early as the 13th century. The S. G. dialects do not know it yet (see *Hart's Goethe's Prose*, p. 40, bottom).
- 5. The diphthongization of the long vowels \hat{i} , \hat{u} , in (whether < G. T. $\ddot{e}u$ or umlant of \hat{u} , value \ddot{u} long) $> \epsilon i$, an, ϵu ($\ddot{u}u$), respectively.

Ex.: brei < dri, Beib < wip; et in the present of the I. Class; faut < last; hat < hat; Saut < hat; Baufer < hiusir < hat; Maufe < miuse < miss; Treue < triune; cuch < iuch; Leuchte < liuhte; et beut < bintet. The Eng. cognates, e.g., the verbs of the I. Class write — wrote, shine — shone, loud, hide (< Ags. hyd), sow, house, mouse — mice show that a similar diphthongization of long i and u has taken place. o in wrote, shone < Ags. a < ai corresponds to the old diphthong, M. II. (i. ei as in schein, reiz, etc. Modern German et therefore goes back to i in heirat < hirat; to ei in schein < scheiden; at always goes back to ei, at as in Mai, Raiser, au < û in haus < hats; but < on in lausen < lousine sin (eu) < iu < û by umlaut, in hauser < hats; but < on umlaut of ou (< au) in Freube < röute < lousine shougen < lousine hougen < lousine shougen, ablauts. II.)

- a. This is a S.G. feature, especially Bavarian, in which dialect it started about 1200. It spread over East Frankish and Upper Saxon in the 14th and 15th centuries and latest over Suabian. All the other dialects whether L., M. or S. G. do not know this change. "House" is still "hûs" in Bremen and in Bâle. The new diphthongs are still kept apart from the old ones in dialect, but the standard spoken language recognizes no difference.
- 489. The following changes do not affect very many words. They are mostly S. G. features and though quite old, the standard and the common spoken language do not agree upon all words. The former favors c and i, the latter ö and ii.
- 1. e, $\ddot{v} > \ddot{v}$ in ergößen (Classics still ergeßen), Hölle, Löße, Höwe, zwölf (standard zwelf), Idwören and a few others. Rarely e, $\ddot{v} > v$ or u after w: wollen < wellen; wohl < wèlla; fommen < quëman. This is as old as O. H. G., however.
- 2. i > ü in Hülfe Hilfe; sprühen sprihen; würdig; wüßte; Sprichwort Sprüchwort. i < ü in wirfen + work and Kissen, but also still Küssen + cushion.

- 3. $\hat{a} > 5$, Ohumacht, folk-etymology for Ohmacht < âmaht ; wo < wall; ohme < âme ; Monat < mand : : and Doble < takele. Compare Bahn and Args woods.
- 4. Both S. and M. G, is u > 0, $\ddot{u} > \ddot{0}$, regularly before modern mm, nn and n + any other cons, but see 125, 1.

Ex.: Past part. and pret. subj. of Class III., 2.; Bonne < wunne; fremm < vrum; sonder < sunder; umsonst < umbesus; Sosn < sun. Compare Bronn (pootic), but Brunnen (why u is not clear); Nondy < münich

5. Before palatal g, ϕ e > i. By this -ig and -i ϕ have become the only suffixes instead of O. and M. H. G. ee, ee, eeh, ach, see **509**.

Ex.: Fittich < fettach; Kranich < kranech, O. H. G. chranuh; fertig < vertec; Honig < honec.

490. B. Consonants.

1. The spread of st for s before I, m, n, and w.

Ex.: Schlaf < sldf, + sleep; Schleim < slm + slime; Schmer < smer; schmeißen < smigen, + smite; Schmee < snê, + snow; Schmeße < snepfe, + snipe; Schweiße < sweiz + sweat; schwimmen < swimmen, + swim. The Eng. cognates still show old s.

 α . This is a S. G. feature, starting in the 15th century and extending over the M. G. and the colonized eastern L. G. dialects (Paul). In the 16th ft was substituted for f after r in a few words and later still in initial fp. ft.

All these [c]'s are recognized by the standard pronunciation, but the S. and M. G. dialects know almost no limit in the use of [c]. M. G. dialects substitute it even for c], viz., mi[c] for mic. See 391, 1.

- b. $\mathfrak{S} > \mathfrak{f}d$ also after \mathfrak{r} , e.g., $\mathfrak{f}irfd < hirz+hart$, $\mathfrak{K}irfde < kirse+cherry$, herefiden < hersen. Since $\mathfrak{f}d\mathfrak{p}$, $\mathfrak{f}d\mathfrak{r}$ are not recognized in the spelling of initial $\mathfrak{f}\mathfrak{p}$, $\mathfrak{f}\mathfrak{k}$. Eng. st, sp, and G. $\mathfrak{f}\mathfrak{k}$, $\mathfrak{f}\mathfrak{p}$ correspond: Stabt, Statt, Statte < stat, + stead; Spie $\mathfrak{f} < spie$ + spit.
- c. This [6] for f is not a phonetic change as is generally taken for granted. In the transition from O. > M. H. G. sc had become sch first before the front vowels, then before all the vowels and then before r. sc > sch before a palatal vowel is a phonetic transition called palatalization due to the following vowel and attended by loosening of the contact, and is known in Eng. and the Romance dialects as well. See Elist Early Eng. Pronunciation, p. 1154. The transition-sound was no doubt the present Westphalian sjil, a double sound. At first only sc > sch in the above order, and not s > sch. The links were sk + pal. vowel > skj > sjh > sh.

d. Before vowels and r G. [c] corresponds to Eng. sh. e. g., Schiff+ship; Scham + shame; [chin + sheen; Schrot + shread, shroud; Schroin + shrine. When Eng. sc, sk corresponds to G. [c], [c], there is something wrong, due generally to foreign origin or influence, in one or the other. Compare Schulc + school; Schaum + scum (Norse); Lanbschaft + land scape (D.); Stanba't + scandal (Fr.).

2. z < t, see **414**, 1) > s, written f, s, ff, fg.

3. $\phi = kh$ (< old ch, cch and medial h) has become jh after front-vowels and after r, l, and n. See 375.

This transition is not shared by S. G. The Eng. cognates show k or silent gh for I.-E. k; $\mathfrak{nidt} < niht$ (= nikht) + not, nought; $\mathfrak{Widt} < wiht$ + wight.

a. d before s in the same syllable > ks, the same in Eng. as early as Anglo-Saxon.

Ex.: Finds < fuhs + fox; Buds < buhs-boum, + box; finds < sehs + six; Anfie < ahse, + axle; Art < acchus + axe (t is excrescent).

b. Medial h at the end of a syllable is silent now, schen, sich—still in Gesicht; sleucht—still in Gesicht; sleucht—siehen; hoch—höher; rauch still in Rauchwerf, furs, -- rauh; schmähen—Schmach.

4. mb > mm, Eng. still mb: Lamm < lamp — lambes + lamb; Rummer < kumber, + to cumber.

5. m — n, Eng. still m. $\mathfrak{Befen} < besem + \mathrm{besom}$; Faben $< fadem + \mathrm{fathom}.$

 $6. \ w < bh$, the labio-labial bh has become labio-dental v in the standard pronunciation; it has disappeared after ou, in (now an, cn); in a few cases aw > au; after 1 and r it became b, beginning in the 14th century. Eng. cognates show a vowel + some silent letter.

Ex.: neu < neu, + new; shauen < schouwen + show; grau < grau < graues, + gray; blau < blaves + blue, due to Fr. bleu. Gerben <

garwen, + yare; Schwalbe < svalve, + swallow; Narbe, a scar < narwe, + narrow, lit. "contracted surface;" gelb < gel — gelwes, + yellow. Some cases show doublets due to levelling in favor of the uninflected form: fabl — fabl < ral — valves + fallow; Sper-ling + sparrow—Sperber < sparwaere + sparrow-hawk.

- 491. 1. Other transitions are not general enough to deserve special mention. It is important to distinguish real phonetic transitions and differences between the two periods in the history of the language due to levelling and analogy. The latter have been frequently treated in the comments upon the various inflections. See the levelling in the declension of fem. nouns, 433; between sg. and pl. pret., 460.
- 2. The disappearance of sounds by contraction ought also to be considered, e.g., of j for which a merely orthographical b has been substituted (see 363, 2) or of c in 3, pers, sg. pres, of strong verbs whose stem ends in t as shift < schiltet. Examples of new sounds are c between \hat{i} , no, \hat{u} and r as in Trance < trule (Scier < $g\hat{v}r$; of t(b) after final n and s as in jemanh < ieman, eigentlich < eigenliche, Obit < obez, Art < uekes.

The German word-stock.

- 492. The following sources have furnished words and forms older than any occurring in the literatures:
- 1. Runes, e.g., the famous inscription on the golden horn, which reads ek hlewagastiz holtingaz horna tawid $\hat{\sigma} = 1$, Hlewagastiz (= lee-host?) of Holstein, made (the) horn.
- 2. The words borrowed by Fins and Laplanders before the race-migrations, when the latter were in contact with the Scandinavians, the former with the Goths in the South, e. g., "kunungas," "king."
- 3. Words and proper names occurring in Latin and Greek authors, e.g., the name "Teutones" would seem to go back to a period before Grimm's Law (see Kluge's dictionary); glosum = amber, Ags. glove, + glass in all Germanic dialects; "alces" in Caesar = meaning "elk," (). H. G. elch, Ags. eolch; modern Eng. "elk" is reimported from Norse.
- 4. German has a much larger Germanic word-stock than Middle and modern English, because through the Norman conquest the Romance was engrafted upon old English and so many old English (Germanic) words died out. But compare the couplets calf—veal; deer—venison; sow, swine—pork; hunt—chase.

- a. German, never having had to accept such a large foreign element, has treated foreign words very stepmotherly. English welcomes every stranger, at least our large dictionaries do, which contain as much as ten per centum of words that are no more English than they are German. A German, seeing such a dictionary with colored flags, steam-engines, animals, and what not, takes it for an encyclopedia. In German a foreign word has to undergo a long period of probation before it is accepted in the language and in the dictionary. Foreign words are collected mostly in the "Fremdworterbuch," i. e., Dictionary of foreign words.
- 493. The first larger influx of foreign words into German came through contact with Roman civilization, e.g., Straße, Pfahl, Make, Mücke, Mette, Mücke, Mette, Kenker; the second through Christianization: Mirche, fahlei'en, Mreuz, Engel, Priester, Pfasse, predigen, and a great many others. These and other foreign words of the O. H. G. period were quite thoroughly Germanized. They took part in the shifting then going on and their accent was put upon the stem-syllable.
- 1. In later O. H. G. and in M. H. G. the chief source, from which foreign words came, were the crusades and the institution of chivalry; in later M. H. G. and early N. H. G., the revival of learning and the thirty years war, e.g., Vala's, Stinte, Teurni'er, Thren; in fact all older nouns in -ie'r and verbs in -ie'ren. Schiller's Wallenstein has many foreign words, e.g., Armbrust; malebei'en; Panier, Pulver, Pult.
- 2. In the last 200 years Germans have taken up, as all nations have done, a large number of words from Greek, Latin and the Romance languages, words which the progress of civilization calls for. But beginning with the M. H. G. period German has not been able to change the foreign accent, e.g., the verbs in -ic'ren, even when this ending is added to German words as befieren, flutieren, banfieren; Mclobei' or -bic', Baftei', Bataillo'n, Balla'be, Ballo'n, Balle'te; the many nouns in -ic'. Compare English which changed in its middle period the accent of nearly all Norman-French words, e.g., reason, season, melancholy. Later te'legraph, but German Iclama'rh.
- a. There has sprung up since 1870 a tendency in high official circles to banish foreign words, but it is not likely to meet with much success. The military system uses hundreds of them still.
- The Postmaster-General of the German empire objected to Telephon, because he could not decide upon the gender, and so "Terapreder" was made the official word. A letter to be called for must have on it "Peflagernt," not "poste restante" as formerly.
- 3. One more large source of borrowed words has to be mentioned which began as early as the 15th century, viz., Low German and Dutch (also English). All words that contain "p," for instance, must be either foreign (Nappel, Nanther) or non-High-German, because there can be no p

in II. G. (see 409, 2). If the words do not come directly from Low German, they have been influenced by it and taken L. G. form.

Ex.: puffen, puften, Pode, Boft, glatt, Plunber, Bappen. Words in gg, bb: Ebbe, Egge, Rogge, Flagge, Bagger, flügge.

- 4. Notice the many shipping terms: Flagge, Bord, Boot, Spriet, Lea, Brack, Steven (v = w). Words in -cht for st, e.g., sacht, H. G. sanst; Schacht, H. G. Schaft; Schlucht for Schlust. The ending -chen is Low and M. German; -stein, South German. Fett for seist is L. G.
- 494. A small group of words was introduced twice, but at different periods, e.g., Pfalz (O. H. G.), Pala's (M. H. G.) < palatium, but see Kluge's Dict. Barge (O. H. G.), Tartsc (M. H. G.) + Eng. target < V. L. targia (if this is not originally German and belongs to the next group). Melodei was really borrowed, Melodic is a later doublet after the many nouns in -ic. Fehlen + to fail, faltieren, to fail (in business) < F. faillir.
- 1. Compare Eng. frail and fragile; quite quiet; exploit explicite. Many originally German words, adopted by another language, are borrowed again in a foreign form: Wagen Waggen + Eng. wain wagon; Spion < spiken German Späher; Vivoual < blivacht, Veiwacht; die Garberobe + guard, + wardrobe < warta, warten die Warte, der Wart + ward; Stuff < Ital. stucco and this from G. Stuff, O. H. G. stucchi.
- 2. Besides isolated and obscure German words a large number of foreign words are exposed to "folk-etymology," because they are not understood. These have been collected by Andresen in his "deutsche Volksetymologie." (See also Palmer's Folk-etymology). Schrich < L. hederacea, ground-ivy. Abenteuer (archaic spelling even Abenbieuer), < M. H. G. aventiure < Rom. aventure.
- 3. Bickfraß, wolverine < Norse fjullfress=moutain-bear, as if it were a great eater; Sünbflut as if from Sünce and Flut, "the flood that came on account of sin," but it is from Sin—meaning "ever," "universal" as in Singrün, evergreen. Leumund as if it meant "Lügenmund" or "Leutemund, "but < hliumunt, hlium, in which—munt is suffix, "hliu" < the same root as laut, loud + Gr. κλύω. See Maulmurf, 400. Compare Eng. causeway < O. Fr. chaucié < L. calciutam (viam); country-dance < counter-dance, Fr. contredanse.

Hundreds of examples will be found in Andresen and Palmer's collections. The words in 494, 494, 1, have never been collected.

D. WORDFORMATION.

This chapter does not contain a complete German etymology. It aims merely at giving a brief, practical survey of the derivation of German words for students who know a little English and Latin. A knowledge of the older forms of some Germanic dialects cannot be expected from the student. For practical reasons only, the following subdivisions of the chapter are made.

- **495.** We may distinguish four ways of forming and deriving words:
 - 1. By ablant without derivative suffix, see 496, 1, 3.
- 2. By suffixing some element which was once perhaps an independent word.
 - 3. By prefixing such element.
 - 4. By composition of independent words.
- 496. The pronouns have roots peculiar to themselves and many adverbs are formed from the pronominal roots. Nouns (that is, substantives and adjectives) and verbs had probably the same roots, though it is customary to speak, in contrast to prononigal roots, only of verbal roots, from which nouns were formed later. We count as primitive all strong verbs and those nouns which have no apparent derivative suffix. From a 4'b'xnd', in which x represents the vowel that is to appear according to the various ablaut-grades, both nouns and verbs were formed. In G. T this root would be bend. It furnished binden, band, gebunden, tas Bant, ter Bunt, ber Bant, bas Bund (for Bundel). Both nouns and verbs had their stem-suffixes, of course. These made them into words. Roots are to the etymologist what x, y, z are to the mathematician. They are something unreal and abstracted from the actual phenomena of languages. No one ever spoke in roots. In a word we distinguish the stem and the inflections. The stem minus the stem-suffix is the root. Of every root, noun and strong verb are not now extant, for instance, fieb, leb, but weak verbs by means of the suffix jo-je, were formed from the same root, I. E. $\sqrt{\text{lxub'}}$, G. T. $\sqrt{\text{lxub}}$, e. g., (g)lauben, loben. x appears as e-i in lieb, Liebe < lioba, *leub-; as a in (g)lauben, (er)lau ben; it disappears in 20b, leben, the weakest or zero stage of ablant. See 394.
- 1. Formed by ablant alone, we consider strong verbs, nouns of the same roots and nouns from roots that may have no strong verb extant.
- 2. The stem-suffix may have been $o, jo, i, u, \hat{a}, j\hat{a}$ (fem.), etc. We are inclined to look upon the jo-stems as derivatives because they suffered umlant, e, g, \hat{y} for \hat{y} for this because $jo, j\hat{a}, wo, w\hat{a}$ are not primary stem-suffixes, but for our purposes there is no harm in confounding the primary and secondary suffixes.

3. Examples of the derivation of verbs and of substantives by ablant alone.

I. ablaut-series: beißen, ber Biß; reich, Reib. II.: schließen, bas Schloß, ber Schluß; triesen, ber Tropf, die Trause; bas Loch, die Lücke. III.: schwimmen, ber Schwamm, ber Sumpf (?), die Schwemme; ber Schlund, ber Ning. IV.: bergen, ber Berg, die Burg, ber Bürge; schallen, schellen, ber Schall. V.: geben, die Gabe (rather geba), gebe or gabe (aclj.). VI.: graben, bas Grab, die Grube; ich muß, ber Dahn, bas Duhn.

To the G. T. â - ô series: thun, acthan, die That. See 476, 2.

Derivation of Substantives

497. Derived by a late ablaut, also directly from a weak verb.

Ex.: Der Schund < schinden, = refuse; der Beschl < beschlien; der Handeln; das Opser < opsern; der Arger < ärgern. Feminines in -e: die Winde + windlass < winden; die Kähre + ferry < vern < faran.

498. DERIVATION BY VOWEL-SUFFIXES:

1. e < î formed from adjectives, all feminine, e.g., Größe < größ; Söße < hoch ; Schöne < hoch.; Balbe < balb (now only adverb); Güte < gut — guotî < guot. î produced umlaut.

- 2. e < i < jo birte < berbe.
- 3. $\epsilon i < i v < \text{Romance } i v$, i a, always with chief-stress upon it, at first only in foreign words, then spreading very rapidly in N. H. G.

It is attached most frequently to nouns and verbs ending in -cl. -cr. -cn, so that the ending was felt to be -cr.i, e. g., Bauberei', Arzenei', Arzenei', Arzenei', Arzenei', Bägerei. It denotes also a place of business: Drugerei, Bägerei. It implies a slur, Juristerei, Kinderei.

4. it only in foreign words. It is the later form of ia, ie, and the nouns were formed after i had become ei.

Ex.: Astronomic', Ge'egraphic', The'elogie', etc. —ie has crowded out the older—ei, or they appear together with a difference of meaning. Melebii — Melebii, both mean "melody"; Partei = party, faction — Partie = game, match, company, excursion; Phantasei + fancy, — Phantase + phantasey.

DERIVATION BY CONSONANT SUFFIXES.

499. Liquids and their combinations.

1, generally $\mathfrak{C} < 0$. H. G. ul (al), il. il produces umlaut. It is weak or unaccented. + Eng. le, + L. -ul-us. Majority of substantives are masculine.

Ex.: 1. 1 < ul, al : ber Stabl, bas Beil, Maul, bie Seele.

- 2. el (< ul, al): der Banbel, Mangel, Nabel, Schnabel, Sattel, Nebel; die Facel, Gurael, Burgel, Fasel, Schaufel.
- 3. $\mathfrak{cl} < il$. Most of them denote means and instruments like the femnines < ul, al.

Ex.: ber Beutel, Büttel (+ beadle), Löffel, Kegel + cudgel (?), Schlüffel, Armel, Zügel. These are very numerous.

4. cl, + Eng. -le, sign of diminutives, < ila, ili. Neuter gender. A S. German favorite from old times, now (c, l, see Goethe's famous Schweizerlieb.

Ex.: Bunbel, Buchel, Rinbel. Proper names: Friedel, Bacherl.

5. et in foreign words: die Orgel < V. L. organa; Leufel < $\delta\iota\iota\iota\beta$ 0 $\delta\iota\sigma$ 5; das Siegel < L. sigillum; der Efel < L. asinus; der Kümmel < L. cuminum.

500. I combined with other suffixes.

1. with s in fcf (weak accent), fal (secondary accent) < sat, is + at, generally producing umlaut. Gender prevailingly neuter, but also a few fem. and very few masc.

Ex. of -fel: ber Wechfel, bas Ratfel, Überbleibfel, Sadfel.

Ex. of -sal: das Schicksal, das Labsal, das Scheufal, die Saumjal, die Trübsal. Some have double gender.

2 - kin < ii + in, secondary accent, very numerous, produces umlaut, noun always neuter. See **493**, 4. Now only in solemn diction and poetry.

Ex.: Rinblein, Lämmlein, Mägblein, Söhnlein, otc. -elden is rare : Buchelden, F. 3779.

3. -ling < ul, il + ing, + Eng. -ling, weak accent, often with a depreciative force. Its second element was at first only added to nouns in -l, then -ling became the suffix.

Ex.: Frembling, Finbling + foundling; Jüngling + youngling; Bibling, Däumling; Mickling, hireling; Säugling + suckling; Säpößling, Bwilling.

- a. -lingen (en is Dative pl.) forms many names of places, Hamelingen, Gravelingen.
- 4. lcr < l + cr is a quite modern suffix. For cr, see 507, 1. It started with nouns that came from verbs in -cln or nouns in -cl.

Ex.: Künstler < fünsteln; Schmeichler < schmeicheln; but Häustler < Halle; Tischler < Tisch. Implies a slur, e.g., Rechtler < Recht. Comp. Eng. hostler < hostel.

501. cm, m, am, en < cm. Of these m, en are unaccented and form no syllable; -cm has weak accent, am has secondary. < O. H. G. m, um, am, + Eng. m, om. For em > cm, see **490**, 5.

Ex.: der Baum, + beam; Traum, + dream; Baum + team; Schwarm + swarm; der Atem (Odem, the biblical form), Brodem; der Boden, der Busen, der Baden, der Besen; der Eidam, der Brosam, in which am has been restored in place of older -cm. das Bittum belongs here, but num has crept in for older "widem," as shown in the verb widmen.

m is a suffix in -tum $< \sqrt{d^2\hat{a}}$, see 515, 5.

502. en, $n_i < 0$. H. G. an, in + Eng. en, n, on, in.

Ex.: ber Dorn, + thorn; Dafen, + haven; bas Kern, + corn; bas Reich, + token, ber Degen, + thane. Regen, + rain; Wagen, + wain, wagen. Often lost in G., compare ber Rabe, + raven; bie Wolfe, + welkin; Küde, + kitchen; Kette, + chain. en of inf. is lost in English. In G. en has crept into the Nominative and changed the inflection, see 435, 2. In some cases, e. g., Kern, Born + Ags. torn, n is the participial suffix -no, see 453, 1.

1. The -cn of the weak declension really belongs here, since it forms nouns denoting the agent, for instance, from verbs, bicten, bet Wote, bet Boten. But we feel it now as an inflectional ending. See 432.

-ner is not a real suffix. Compare let, 500, 4. In Reduct n belongs to the stem < redina, redinân. In others n is added by analogy: Michner < Glode; Kircher < Kirche. Pförtner < portenarius; Söldner < soldenarius, Sold.

2. cn < în, a now rare diminutive except in composition in -Icin. -Ach. Ex.: bas Füllen (Folen) + filly, foal; Schwein, + swine < (1. T. sû; bas Küsten for Küchlein + chicken < from the same stem as "cock."

503. nis, nis, nis, forms neuter and fem. nouns, generally abstract ones denoting existence and condition, sometimes place, + Eng. -ness.

Generally from noun and verb stems, but also from adjectives: bit spinned < with Finfernid < finfer. It represents now older -niss- and -nuss-, Go. -nassus, and generally produces unlaut. -niss, -nuss are compounded of n + issi, issa and n + ussi.

Ex.: bas Begrabnis, Gefängnis, Bermachtnis; bie Erlaubnis, Kenntnis, Betrübnis.

504. in, inn- forms fem. nouns, denoting females, from mass. < M. H. G. in, in, inne < O. H. G. innd, in, + L. ina in regina.

Ex.: Gott, Göttin; Buchs, Füchsin + vixen; Sannoveraner, Sannoveranerin. Very numerous. Not extant in Eng. except in vixen, Ags. fyxen. To be translated by "female," "sho-," "lady-."

- 1. —in has become (c)n and is attached to surnames having the force of the more elegant Frau+surname without suffix, e. g., die Müllern instead of Frau Müller, die Spannhafen instead of Frau Spannhafe.
- 505. -nd, end, (and, ant), really participial suffix (see 453), + Eng. -end.

Ex.: ber Freund + friend; Feind + fiend; Weigand, champion; Seiland, + Heliand, Saviour; Balant, but the cognate ant is foreign and has chiefstress, c. g., Musifa'nt, Ministra'nt. No participial ending in ber Abend, ber Elefa'nt.

506. -ng, -ing, -ung, < older ing, ung, + Eng. ing, ng, weak accent.

Ex.: ber Baring + herring; ber Schilling + shilling; bas Meffing, brass, Agn mäsling.

- 1. n is lost in Rönig, + king; ber Pfennig (< pfenninc) + penny.
- 2. ung forms numerous fem. nouns from verbs. Like Eng. ing they denote mostly action. The suffix is gaining ground. But Eng. nouns in ing are frequently best translated into German by an infinitive. Excitive Exchange, Bilbung, Beitung + tidings, Unfertigung + manufacture: Berbampfung, ovaporation, etc. Riding + bas Reiten; building, bas Bauen.

3. ing and ung + er and en form many patronymics and names of places: Thüringen, Meiningen, Twistringen, Mohrungen, Hornung, Nibelangen, Merovinger, Bähringer, Lethringer. For er (see 507, 2). —en is originally dative pl.

507. -cr is of various origins.

1. It denotes the agent, < ere < are < dri, + Eng. er, or, ary, + Lat. -arius.

It is attached to both nouns and verbs and is preceded by umlaut as a rule.

Ex.: Bauberer, Rammerer, Schüler, Ritter, Schneiber, Reiter, Tanger. Very numerous.

- a. Borrowed words not denoting the agent: Bentner, < L. centenarius + centenary, a hundred weight; Trichter < late L. tractarius (?), funnel.
- 2. -er denotes origin and home, attached to names of places and countries. Used as an adj. it does not vary.

It was originally a Genitive pl., but of the same origin with the preceding: Thuringer, Berliner, Biener, Schweizer Räse.

3. –cr without any particular force, and words with it are looked upon as primitive $\langle r, ur (ar), ir, + \text{Eng. r, cr, re,} + \text{I.-E. -ro-}.$

Ex.: ber Ader, hammer, Commer, Donner; Die Aber, Feber, Leber, Schulter; bas Jutter, Leber, Wetter, Gilber, Waffer.

4. -ier in foreign words, e. g., ter Cavalier, Barbier, is identical with cr sub 1, but is of Romance form, $\langle L. -arius.$

For -cr as a sign of pl., see 431.

508. Suffix -ter, ter.

- 1. < tar, forms names of relationship + Eng. ter, ther, < I.-E. -t-r. It is unaccented. Ex. der Vater, Bruder, die Mutter, Schweiter, Tochter.
- 2. < tara, tra, tira+Eng. ter, der. Denotes Instrument. Not numerous, unaccented. + L. trum, G. τρον, τρια.

Ex.: Master, cord; die Leiter + ladder; das Gelächter + laughter; Laster < lahan, to blame. In the last word -ster is secondary

suffix. It appears also in der Hamster, badger; die Csster, magpie, which are of doubtful origin. Das Fenster < Lat. fenestra.

ber (ter) as comparative suffix, see 530.

g, t, ich, ch.

g and f, Eng. g and k, it is difficult to separate from the rest of the stem. Nouns ending in them must be considered primitive.

509. -id, sometimes spelt -ig, forms a few masc. nouns. It represents M. H. G. -ech and -ich < uh, ah and ih < uk, ak, ik + Eng. -ock, -k. See **489**, 5.

Ex.: der Bottich (+ buttock), der Habich(t) + hawk; Kranich + erane; Kittich, Teppich; das Reißich, Reißig, brushwood; der Rettig (-ich) + radish < L. radic-em; Molch < M. H. G. mol, + mole, but means lizard, der Eßig (ig for ich), (+ Eng. acid) < L. acetum, through *atecum (?). Nadi'schen is of later importation. Der Käßig, Käßich, does not belong here, but < kerje (> kefge) < L. carea.

- 1. -idh := idh + t, for which see 512, 2, forms a number of neuter nouns denoting fullness, plenty, frequency. Late suffix of 15th century. Das Diddt, + Eng. thicket (but -ct is Romance); das Rehricht, sweepings; das Rehricht, reeds. Der Dabicht (see above).
- 510. -drn forms the common neuter diminutives and has crowded out -lrin in the spoken language. See 493, 4.

Compounded of ith, see above, and u < in, in, see 502, 2. Always produces umlaut. Has weak accent, + Eng. kin. Ex.: tas Männden, + manikin: Lümmden, + lambkin: Bürmden, Mäbden, Beitden.

d, t, z, f, fc.

511. 1.
$$-t-$$
 + Eng. $-th$, $<$ G. T. $-'th-$, $<$ I. E. $-'t-$.

Ex.: Der Tob, + death; Mund, + mouth; das (bie) Mabb, + aftermath; die Bude, + booth; die Bürde, burthen. Not numerous in German. Where Engl. forms abstract nouns in -th, from adjectives generally, G. forms the same in "e: Bärme, warmth; True, truth; Tiefe, depth.

2. $-\Re < -ida$, -idd, unaccented; $-\Re$, $-\Im$, $-\operatorname{at}$, $< -\widehat{o}ta$, $\widehat{o}^{(i)}$, -uoti, secondary accent, form neuter and fem. nouns.

Ex.: Die Frembe, Frende, Gebärde, Bierde, Begierde; das Getreide < getregede < gitragida, what is born on the fields, crops, grain. Das Gelübbe, Gebände, Gemälde.

a. Das Meineb, jewel; die Einöbe due to folk-etymology after Öbe, desert, then wilderness = solitude, lone-ness. Der Monat+month < manot; die Seinat, + home, native land; der Bierat, ornamentation. But Seirat, mar riage < hi < hiw + rait. Die Armut belongs here, its ut < uoti, O. II. Garmuoti. Wermut, + Eng. wormwood, has this suffix, but its root is doubtful. For -at in foreign words, see 163, 1.

512. -t forms numerous fem. nouns and a few masculines, + Eng. t when preceded by surd spirants, see **412**, 2, < original t.

Ex.: die Kraft + craft; die Macht + might; die Trift + drift; die Flucht | flight; der Froft + frost; der Geist + ghost; der Gast + guest; die Mast, + mast (of animals); Gist, + gist; Grust + crypt.

- 1. This -t forms other nouns, but it then corresponds to Eng. d, rarely th; mostly < I.-E. -t- before the accent, with which the suffix of the weak past participle is identical (see 453, 1): bic Surt + ford; ber Wart + ward; Saat, + seed; That, + deed; bic Hut, + flood; bic Blüt, bloth; bic Stätt, Stabt, + stead; ber Mut, + mood; bic But, + wood (mad).
- 2. Notice the excrescent t, which the many nouns ending in a spirant + t encouraged, r, g., ber Saft + sap; bic Art+axe; bas Dbft < obes; in -fdaft + -ship, -scape (?). After -d, see 509. 1. In foreign words, e, g., ber Dafa'ft, + palace; Darft, + pope; Dargt, + morass.
- 3. If in Anni I finner, Brunt < bremen, Gunt < gömen is not clear. To call it "cuphonic" does not explain. Arxt < O. H. G. arxât < late L. archiater, but phonetically not quite clear. Die Magh, Math + maid M. H. G. maget, meit has the suffix b-t, < G. T. th, derived from a mass. magus, "boy."

513. \mathfrak{s} , \vdash is rare, + Eng. \mathfrak{s} , $< i\mathfrak{s}$ -, $e\mathfrak{s}$ -.

Ex.: Flachs + flax; Fuchs, + fox; Luchs + lynx (?); bie Achfe, + axle; bie Hälfe, pod; ber Krebs < crebeze + crayfish, due to popular etymology, as if "cray-fish"; bie Bremse, brake; bie Hornisse + hornet; bie Gans + goose.

514. [d)— is of various origins, but generally inseparable.

< isk- comes the frequent adjective suffix -sch + Eng. ish, sh, e.g., ter Mensh < 0. H. G. mennisko, an adjective; der Frosa + frog (see Kluge);

Welsh Welsh. In Sirsh + hart, sh < s, z. In Rirsh + cherry < *ceresia sh < s. See 525, 4.

a. -iche is added to surnames to denote Mrs., but is quite colloquial, bie Reinhardtice for Frau Reinhardt, die Landwehriche for Frau Landwehr.

NOUNS DERIVED BY NOMINAL SUFFIXES, WHICH CAN BE TRACED TO INDEPENDENT WORDS STILL EXTANT IN THE OLDER GERMANIC DIALECTS.

For earlier periods of the language this derivation would therefore properly come under the head of wordcomposition.

- 515. The suffixes are: -hcit, -fcit, -rich, -jchaft, -tum. They all form abstract fem. nouns, chiefly from substantives and adjectives, except those in -rich and -tum, and have secondary accent.
- 1. -heit + Eng. -hood, -head. < O. H. G. heit, Ags. had, meaning character, nature, rank. In a few nouns it means "a body of," and has collective force. Very frequent: bic Freiheit; Gettheit + godhead; Kinbheit + childhood; Menfoheit, mankind; Ehriftenbeit, Christendom.
- 2. -feit composed of -heit and the adjective suffix -ee or ic, to which it was attached in M. H. G. First ee-heit, ic-heit (> echeit, icheit) > ekeit, ikeit > keit, feit. -feit is attached only to adj. in -bar, -er, -ig, -lich and -fam. Very numerous.
- Ex.: die Dankbarkeit, Eitelkeit, Heiterkeit, Ewigkeit, Freundlichkeit, Einfamkeit. The derivation from adjectives in -ig is so common, that -igkeit was looked upon as the suffix and adjectives in -loo and baft only form nouns in this way: die Chrlosigkeit, Straflosigkeit, Ligenhaftigkeit, Krantbaftigkeit. In -ig-keit ig has been restored in many nouns, after it had helped form keit, e. g., Süßigkeit < successeit; Ewigkeit < cuecheit. See 489, 5.
- a. Mark the distinction sometimes made between nouns in -igleit, -leit and -heit from the same adj. Die Aleinigleit := trifle, die Aleinigleit = littleness; die Aleinigleit = a piece of news; die Aleinigleit = newness; die Aleinigleit, cleanliness; die Aleinheit, purity, clearness.
- 3. -rid) + Eng. -ric, -ry < O. H. G. \hat{rich} + L. \hat{rex} , \hat{regis} , forms a number of proper names. Denotes "powerful," "commanding." Ex.: Büttrid, blood thirsty person, tyrant; Frichtid) + Frederic; Printid) + Henry; Wespirid, a plantain, lit. "ruler of the way."
- a. -rid appears in the names for certain male birds. The oldest is finiterid; † drake < outrake. This is certainly not identical with the above -rich; it may have been shaped after it on account of antreche, O. H. G. antrahho, which cannot go back to -rich-.

Sanserich + gander, Tauberich, cock-pigeon, are N. H. G. sorms after Enterich, 's (Sanser, Tauber < Sans, Tauber & Hanrich, ensign, < older G. venre, faneri, has -ich by analogy. Hähnbrich may be due to D. vendric (Wiegand) < Fahne, flag. By folk-etymology ber Deberich, from L. heiteracea.

-reich comes under composition.

- 4. -[ϕ aft+Eng. -ship, shape<0. H. G. scaft, meaning character, being, creature; itself a derivative by t < G. T. $\sqrt[4]{\text{skap}}$, from which to shape, ϕ affen. Forms mostly fem. abstract nouns and a few collectives.
- Ex.: bic Freunbschaft + friendship; Grafschaft, county; Lanbschaft + Ags. landscipe, + Eng. landscape (scape due to D. and Norse influence); bic Granbschaft, embassy; Priestrichaft, priesthood; Bermanbschaft, relationship; Gesellschaft, company.
- 5. -tum + Eng. -dom < O. H. G. tuom, M. and N.; Ags. dôm M. + Eng. doom = judgment, law, dominion, power. It forms neuter nouns from nouns, but neuters and masculines from adjectives. The nouns are abstract, but many denote domain and place.
- Ex.: bas bergogtum + dukedom; Königtum, + kingdom; beibentum, + heathendom; beiligtum, sanctuary; ber Britum, error, Reichtum + riches.
- a. Mark a difference in meaning between nouns derived by means of heit, ichait, -tum from the same stem: die Gigenheit, studbornness, peculiarity; die Gigenchaft, quality: das Gigentum, property; die Ghriftenheit = Christendom; das Christentum = Christianity; die Bürgerchaft, all the citizens; das Bürgertum, citizenship; die Beisheit + wisdom; das Weishum, statute.

DERIVATION OF NOUNS BY MEANS OF INSEPARABLE PREFIXES.

516. The composition of nouns by means of independent parts of speech, such as prepositions and adverbs, will not be treated here except the composition by means of those prefixes, such as fit, ilr, etc., which retained the strong form under the noun-accent, but wore down to a weaker form in the verb accentuation and thus became "inseparable." For the principle of accent, see 421. Whenever the prefix of a noun is unaccented and has weak form, the noun is not old, but it is late and derived from the verb, except in one case, viz., the prefix ge_- , g_- .

This is really composition, but we treat of the subject here for convenience.

1. A ber- has the force, 1) of over- üver, from Dutch = excessive. It is rare. Der Aberglaube, superstition, die Aberacht; "proscriptio superior:" Aberwitz, conceit, presumption, imbecility, is M. H. A. aberwitze, abewitze, in which aber = abe, ab. O. H. G. dwizzi.

- 2) The force of again toward, against. It is depreciative: ber Aberwandel, forfeit, back-sliding; Abername, nick-name; bie Aberfaat, second-sowing; ber Aberfaiser=Gegenfaiser, rival emperor. In this sense = after and both probably < af, ab + -ar and -tar respectively.
- 2. After-+ Eng. after: not the first, not genuine, second, retro-, false: Das Afterblatt, stipulo (in botany); bic Aftermuse, false muse; bic Afterfritis, false, second-hand criticism; Afterwell = Nadwell, posterity; Aftermice, subletting.
- 3. Int- + Eng. an-, a-, am- in answer, acknowledge, am-bassador, + L. ante-, Gr. "dvri." Force: against, opposite, in return, removal.

Ex.: bit Antwort, + answer; bas Antiiț, face; ber Antiaț, absolution; bas Anti, office, court < O. II. G. ambaht, Go. andbahti, and + bahto, a servant, Eng. ambassador, embassy < Romance forms < Low L. ambasta < O. II. G. ambaht.

Unaccented it became cut (see 541). Ant- has in some really old nouns given place to the cut- of verbs, e.g., ber Empfa'ng for older ántranc.

- 4. \mathfrak{Bei} , \mathfrak{b} rare as old prefix, but common in modern compounds, consisting of preposition + noun, + Eng. by; in verbs \mathfrak{be} , + Eng. by-, be- < \mathfrak{bi} , \mathfrak{be} ; see Kluge. Perhaps related to Gr. $d\mu\phi i$, L. ambi.
- Ex.: bas Betipiel, example < bispel; bit Beight, confession < bihte < bigihte < bi + jehen; ber Beightaf, cohabitation; ber Beight, + settler, unnaturalized comer; Beifuß, wormwood. The weak unaccented form beis very common in late derivatives from verbs. In M. H. G. appear the doublets bitraht Betra' dy; bigraft begraft; biziht beziht.
- 5. Für-occurs only in one old noun, Fürsprach, mediator, attorney. In the 18th century für and ver were used indiscriminately and a great many compounds now have Bor-only. Unaccented Bar-sub 11.
- 6. Er,-, + Eng. arch-, means chief, original, great- < V. L. arci- < Gr. $a_{pq}i$ -.
- Ex.: der Erzbischof + archbishop; Erzlügner, a great liar; Erznarr, arrant fool; Erzspieler, professional gambler.
- 7. Ge-, g-, the traces of its accent are difficult to find even in the oldest stages of the Germanic dialects, though there are some in Ags. (found by Kluge) and in Go. There are none left in German. It is always unaccented. < O. H. G. ga, gi. Its connection with L. cum, con, is generally asserted, but is difficult to prove. Has intensive, generally collective

force. Nouns of the form $\mathfrak{Ge-e}_{i} < ga-jo$ are almost all neuter and very numerous.

Ex.: ber Glaube + belief; ber Gefelle; bas Glieb, bie Gebulb, bie Gnabe; bie Gefahr; bas Gebäube; Getreibe; Gefchmeibe; Gewerbe; Gebirge; Gehölze. Gappears bofore I, r, n.

8. \mathfrak{M} i $\mathfrak{p}-+$ Eng. mis-. Force: negative, false, failure. For its origin see **453**, 1. In M. II. G. still an adjective, now inseparable, always accented prefix. Only one compound with its derivatives retains *misse*-, viz., $\mathfrak{M}\mathfrak{p}$ fethat + misdeed.

Ex: Very numerous: der Mißbrauch, die Mißernte, der Mißflang, der Mißmut, der Mißgriff.

- 9. Il r + Eng. or- only in "ordeal" and "ort," < older us, ur. Force. origin, great age, great-. Weak, unaccented form = cr- in verbs and their derivatives. u always long except in Ilricil. bas Ilricil + ordeal; ber Ilriprung, bie Ilriunbe; ber Ilriaub, ber Ilrgroßvater; bie Ilriaube; ber Ilrqueil.
 - 10. Un + Eng. un-, of like force, privative, + L. in-, Gr. av-, a-.

Ex.: bie Unart, ber Unbant, bie Ungunst, ber Unwisse. In ungesähr un- stands for ohn-, < An gevære, but in Ohnmacht, ohn stands for Ohmacht < Amald, containing the obsolete â privative.

11. $\Re cr_-$, fr_- always in this weak form and unaccented like $\Re c_-$. Traces of early accent upon it very rare, none now, + Eng. for. Rare in older nouns, very common in later nouns derived from verbs, see 516, < O. H. G. far, fir.

Ex.: ber Berluft, die Bernunft, Frevel + Ags. frafele; Fraß — fressen; Fradt + fraught, freight (see Kluge's Dict.).

- 12. Ber occurs only in nouns derived from verbs. See therefore 546. Ex.: bic Berffreuung, Berffreuung.
- a. For brittel, viertel, see 532, 2. Sungfer, maiden <junefrouwe, daughter of a noble family. Sunfer, young nobleman + younker <june-herr. Sungfrau, virgin, is a modern compound. In such words as Africa, Mimper, Machaer, Schufter, and many others, the second elements are no longer felt; they are suffixes to all intents and purposes. See the dictionary for their derivation.

Composition of Nouns.

517. The second element is always a noun, in a few cases an adjective, but used as a noun. This noun always determines the gender and inflection of the compound. The first element always has the primary accent, the second the secondary accent. See 421; 424,2. The first element may

be any other independent part of speech, a noun, adjective, verb, adverb, or preposition.

Noun + Noun.

518. The relation of the component parts is syntactical; the first element may stand in apposition to the second or it stands in case-relation to it.

In apposition: bas Simmetreich, bie Sommerzeit; many names of plants and trees, ter Apfelbaum, tie Beibelbeere.

In the G. relation : ber Augapfel, ber Ronigsfohn, die Ruhmild.

In the D. relation : ber Schlaftrunt, bas Tintenfaß, bie Tangftunbe.

In the A. relation, including the objective Cenitive : ber Begweiser, Herzeg, Later: mörber.

In the Ablative relation of origin, material, cause: tie Freubenthrane, ber Westwind, bie Stabiseder.

In the Instr. relation, denoting instrument, means, connection: ber Fußiritt, ber Suffchiag, die Leimrute.

In the Locative relation, denoting place, association, even time : bie Tachstube, bas Jahnsteijch, Tagewert, der Fußschat.

- a. The earliest method of combining the nouns was that of attaching the second noun to the stem with its stem-suffix, that is, to the "theme." The vowels of the stem-suffixes became e in M. H. G. or were lost. A later way was that of joining the second noun to the Genitive sg. or pl. of the first noun. This way originated in the relation of noun and its dependent genitive. The sign of the G. sg. 3, 3 was then added also to feminine nouns, which of course were not entitled to it.
 - 1. Stem + noun. Composition proper.
- a. With stem-suffix: ber Tagebieb, ber Hageborn, das Tagelieb, bie Babereife, der Bräutigam, die Nachtigall, die Gänseblume. See the examples with en sub 2, since en was originally stem-suffix. See 502, 1.
- h. Without stem-suffix. Very numerous: der Wildbich, bas Jagbhorn, das Weltmeer, das Gartenbaus, das Handwerf.
- 2. G. sg. or plural + noun. Secondary composition. Case-endings: (c)3, cr. cn. cn and cr were also encouraged by the other cases in which they stood, e. g., N. and A. pl. and in the other cases of the sg. of masc. weak nouns. Indeed (c)3 and (c)n were gradually looked upon as connecting elements between two nouns and crowded out many compounds of proper composition.

Ex.: bas Sonntagofleib, bas Wirtshaus, ber Lanbesherr; ber Sauferverkauf, bie Ninberlehre, bie Mannerwurbe; ber Chrenhort, bas Freudenfest, die Blumenlese, ber Valmenbaum, Feigenbaum, ber Eichenwald, ber Sahnensporn.

3. & between fem. noun + noun. This began as early as the 12th century. -& is a favorite after nouns in t, particularly after the suffixes -t, -beit (feit), -foaft and -ung; and the foreign nouns in -ion and -tät.

Ex.: ber Geburtstag; bie Freiheitsliebe, Deimatoliebe; ber Freunbschaftsbete; bas hoffnungoglud (G.); ber Weihnachtsmann, ber Dochzeitstag; bas Mijffons-blatt, bie Universitätshalle, ber Liebesbrief.

ADJECTIVE + NOUN.

519. The adjective appears without stem-suffix, but see 522. The relation of adjective and noun is that of an attribute or of apposition.

Ex.: die Gutthat, die Weihnacht, hochzeit; ber Langbein, ber Mittleswoch; bie Mittsasten; die Jungfrau, die Gelbsucht, die Kurzweil; ber Großmaul; ber Bose wicht.

- 1. In many compounds the adjective is used as noun and is then inflected, generally in the weak G. pl.: bic Blinten., bic Taubstummenanstalt, bas Kransenbaus.
- 2. There is a small group of compounds in which the union of the elements is not intimate and the adjective is inflected, e.g., die La agenc'ile, La agenc'ile, La agenc'ile, Do herpric'ster, der Hothericher; Geheimerrat, ein Geheimerrat (but also uninflected ber, ein Geheimrat). Mi'tternacht is a secondary compound for the older milnaht + midnight. For their accent, see 422, 1.

520. 1. Numeral + Noun.

Ex.: ber Dreifuß, bas Biered, bie Einbeere, ber 3weifampf, ber 3wiebad, bas Awielicht + twilight, bas Siebengeften, bie Erfigeburt.

2. ADVERB + NOUN.

Many of them are formed from compound verbs.

Ex.: bie Wohlthat, Die Berfunft, ber Pingang, Die Bolluft, Die Aufenwelt, Die Richtanerfennung (= non-), Die Abart, ber Abgott, ber Eingang.

3. Preposition + Noun.

The majority are formed from compound verbs. But not a small number are made directly of preposition + noun.

Ex.: bie Angahl, ber Amboß, bie Ansprache, ber Aufgang, ber Beiname, ber Beitrag, bie Durchfahrt, ber Durchbruch, ber Fürwiß or Vorwiß, bie Gegengabe, bie Sinterlist, ber Inbegriff, ber Mitmensch, ber Nachsomme, bas Rebengebäube, bie Nie berlage, bas Obbach, ber Oberfellner, bie Oberhand, bie übermacht, ber Umfreis, ber Untersag, bie Unterwelt, bie Borwelt, ber Wieberwille, ber Juname, bas Zwischenspiel.

4. VERB + NOUN.

Very numerous. A few with the connecting vowel \neg , which represents the suffix-vowel of weak verbs, older \hat{o} , \hat{c} ,

Ex.: ber Spurhund, ber Singvogel, die Schreibseber, bas Lesebuch, ber Lebe-mann, die Neiselust, ber Leitstern. (See below.)

- a. Osthoff (see his Verbum in der Nominal Composition) has proved that these compounds are not primitive in the 1. E. languages, but that they are originally compounded of noun 1 noun, in which the first noun was felt to be, on account of its stemsuffix, a verb-stem, and this led to the formation of many compounds, in the Germanic, Greek, Slavic and Romance languages, by analogy. Thus feififten, 1 lode-star, does not come from teiten and Etern, though meaning "feitenber Etern," but < M. 11. G. leitestern, in which leite: lode is a noun = guidance, direction.
- **521.** Compounds of more than two words. The accent deserves here special attention, see **421**; **424**, 3.
- 1. Three words, but only two parts: ber hei'ratsa ntrag, ber Mi'tgliedssichti'n, bie Da'mps-schi's steam-navigation, but Da'mpsschi-schitz, steamboat-ride; ber Fe'lbzugs-pla'n, ber ha'ndwerts-bu'rice, die Le'bensversicherungs-gese'llschaft.
- 2. Four words and more. These are not common, much rarer than is generally supposed. Oberpolici'gerichtsprässe in, Stac'tsichustentigunge-temmission for the liquidation of state-debts; Stei'nsohlenbe'rgwerf, Generalselomarschaft.
- a. To get a quick survey of such a word, z ought to be inserted once at least in the first and second words and the last words might begin with a capital as in English.
- b. The capacity of German for forming such compounds is generally exaggerated and that of English underrated. The custom of writing these long nouns as one word is very bad. We might just as well write them so in Eng., e.g., Fireinsurance company's-offic, and we should have the same compound. Official language, certain schools of philosophy and the newspaper are the main sources of such monstrosities. Moreover, the composition exists only for the eye. When we speak we do not divide according to words; we speak in breath-groups, see Sweet's Hdvk., p. 86-.
- 3. Similar to the compounds in **520**, 4, are such whole phrases as Str'll bidei'n, rendez-vous; Thu'nidtgu't, ne'erdowell; Tau'gcui'dts, goodfornofhing.

Derivation of Adjectives.

The comparison of adjectives, and the past participles come really under this head, but see 438 and 453, 1.

522. ADJECTIVES FORMED BY ABLAUT.

These may be called primitive. See 496. They fit into the ablaut-

series just as substantives and verbs do. All have lost stem-suffixes except the jo-stems, still recognizable by the umlant and generally by the final c.

Ex.: reif, steif, bid'; lieb, tief; blinb, hohl, fcon, fuhn, bumm. With -c: enge, gabe, mube, bofe, trage.

ADJECTIVES DERIVED BY SUFFIX.

- 523. 1. -c1, see 499, roots generally obscure: citil + idle; evil, übel; cbel (+ Athel-, Ethel); bunfel.
 - 2. -c m. see 501. rare. Ex.: warm + warm.
- 3. cr < -ar, -r, rare, same as ar of nouns in 507, 3. Ex.: wafter + watchful, brave; bitter + bitter; better, lauter, schwanger; sicher < 1. securus.
- **524.** $-\epsilon n$, -n, see **502.** Very frequent and of various sources, + Eng. en, n.
 - 1. en < 0. H. G. an, in a few words of doubtful origin.
- Ex.: cben + even; fſcin, small + clean; grün + green; ſdön + sheen; ſcin + far; rein < \sqrt{hri} . It is late in albern < alwaere, ſüſſcrn, ſdüdtern, from adj. in -cr, < -ni, -njo.
 - 2. < in, in. Denoting material, "made of."

Ex.: golben for older gülben + golden : wollen + woollen ; seiben, silken : silver + silver ; sebern + leather.

3. ern < n + er, due to the influence of er in such nouns as Silber. Letter and of er in the plural. Compare -ler, ner in nouns, see 500, 4.

Ex.: steinern, of stone; städsern + flaxen; thönern, of clay; hölgern, wooden; nüchtern (?), sober.

4. en < an, in < G. T. $-n\delta$ in all strong past participles. Some fifty or sixty of these stand now "isolated," that is, separated from the verb still extant or the verb is obsolete. See **453**, 1.

Ex.: eigen + own VII. Cl., gebiegen I. Cl. (old doublet of gebiehen), pure: bescheiben VII. Gl. (old doublet of beschieben I. Cl.), modest; gelegen, convenient (verb obsolete); verlegen, embarrassed (v. obsolete); erhaben VI. Cl. (doublet of rhoben), lofty; beritten I. Cl., mounted; offen (?), open; treden + dry, < Varük.

525. 1. -i g, + Eng. -y, represents now both older -ec, -ac and -ic. See 489. 5.

The umlaut could occur only in the adjective which had -ic. It is a living suffix and new adjectives are still being formed with it from any part of speech except verbs.

Ex.: traurig, blutig, häufig, gültig, fpaltig, gewaltig; late formations: heutig, hiefig, obig, bortig. For felig, see 528, 2, a. Mand + many, < manee. Its d for g is L. G. (?).

- 2. ig + lid = iglid, once very common and attached where there was no -ec, -ic. It is now rather adverbial, see 554, 2, and rare in adjectives, e.g., ewiglid, gnabiglid.
- 3. -t d t < -eht, -oht, -oht, is more common in adjectives than in substantives. See **509**.
- a. -ig and -ight furnish doublets, sometimes with a distinction in force. ight with i must be due to -ig with i, as it is very late.

Ex.: steinicht + stony, thöricht, foolish, nebelicht, foggy, stachelicht, priekly.

-icht implies only a slight resemblance: ölicht, slightly oily — ölig, oily.

4. $-i f \phi$, $-f \phi + \text{Eng. ish} < \text{older } -isk$ -, implies a bad sense in contrast with $-\text{li}\phi$, as in Eng. ish and like. See 514.

Ex.: finbiid + childish, finblid + childlike: bău(c)riid + boorish, băucrlid, rustic; denotes origin: prențiid + Prussian; bairiid + Bavarian. Corresponds to -icus in adjectives derived from L.: fomiid, logiid, philologiid. See 514.

- 5. and in the present participle, see 453; 505.
- 6. -(e)t, the past participle, see 453, 1.

But notice those that we no longer feel as participles: tot, laut, falt, etc. Later formations: traut, part.

- 526. Adjectives derived by the nominal suffixes -bar, -baft, -lid and -fam, which were once independent nouns (see 515). For accent, see 424, 1, b.
- 1. -b a r < M. H. G. bare < O. H. G. bdri, < the root of the verb gebarnes. Should have become -br, which really occurs in living dialects, but the levelling was in favor of the full form. Compare L. -fere, Gr. $\phi o \rho \phi c$.
- a. In meaning it corresponds to Eng. -able, -ible, -ful. It means: bearing, producing, capable of, and is attached only to nouns and verbs.

The only adjective to which it is attached is offenba'r, with the actent of the verbs offenba'ren, acba'bren.

Ex. very numerous: transfar, separable; börbar, audible; banfbar, grateful; afribar, honorable. Ur'bar < M. H. G. urbor, has the weak ablant like the L. and Gr. forms given above.

- 2. -hait, a participle either from the root of haben + have, or L. capere, captus (Kluge).
- a. It denotes "possessing," "similar to-," "approaching-." In meaning it corresponds frequently to Eng. -y (+G. ig), -ful, -ly. It is attached to nouns, adjectives and verbs and is sometimes increased by -ig.

Ex. numerous: schlerhast + faulty; schabhast, harmful; schhast + lively; srashast, sunny; wa'hrhast, wahrha'stig, truthful, true: schülerhast + scholarlike, boyish; meisterhast + masterly; schhastig, bodily, incarnate.

3. -[i ϕ < M. H. G. lich < O. H. G. lich, + Ags. -lic + Eng. ly, later again "like."

Originally an adjective, occuring only in compounds, but derived from the subst. Ags. l ℓe , O. II. G. l ℓh = body, form.

- a. In both languages its carliest meaning is "like" or "similar to," then "appropriate," "adapted," finally it became very frequent and often without particular force.
- b. The unflant generally precedes-fid, but is not produced by it. It started originally in stems with i suffix and spread by analogy. This is the most frequent suffix and attached to substantives, adjectives, and verbs.

Ex. göttlich, godlike; ritterlich, chivalrous; traulich, familiar, devoted; fröhlich, merry + frolic; sterblich, mortal; beharrlich, persistent; begreißlich, comprehensible; erbaulich, edifying; glaublich, credible. For -iglich see 552, 2.

c. er in lefetlich, fürchterlich, etc., is due to analogy. These lengthened forms have crowded out the proper old forms leelich, fürchtlich. In certain adjectives the ending has been mistaken for -ig, and the spelling has followed this notion. arctig, bulliquaghlig have the suffix -lich, but cannot now be corrected. allmählich is the official spelling, though frequently allmählig is met with < allgemach, gentle, manageable.

4. -ja m < older -sam, originally a pronoun (+ Eng. same), + Ags. -sum, + Eng. -some, + Gr. ὁμός, + L. sim-ilis.

It denotes originally identity, similarity, but has now no particular force, unless it be capacity, inclination.

Examples not so numerous, the suffix has lost ground.

Ex. cinfam + Eng. lonesome; langfam, slow; gemeinfam, common; arbeitsam, industrious; heilsam + wholesome; grausam, cruel, + gruesome.

-voll, + ful, -los + less, come under composition, though in Eng. they might come under this head.

For -fad, -faltig, -faltig, see the numerals 531, 1.

Derivation of Adjectives by Prefixes.

527. The prefixes in substantives have the same force and accent when attached to adjectives, but only after, erg-, gc-, un-, ur- form immediate compounds. Adjectives with the other prefixes are derived from substantives, verbs, etc. Ex.: a'ferflug, e'rgfaul, getren', u'nnüß, u'ralt, etc.

Composition of Adjectives.

528. The second element is always an adjective or participle. The first element may be any part of speech and stands in the same relation to the second as it does in a compound noun. Accent and form of the first element are also the same. Some old past participles without go are preserved in composition, e. g., trunten, bacen, in wometrunten, intoxicated with delight; bausbacen + homebaked, homely.

1. Adjective + Adjective.

Ex.: tollfühn, dummbreift; dunkelblau; hochmütig < Sochmut (see 2, b); blaudingig, rotbäffig.

2. Substantive + Adjective.

Ex.: tobfrant, *frei'deweiß, *geldgelb, liebedfrant, wonnetrunten, *mausetot, *sederleicht, liebevoll, gedansenreich, hosinungslost, freudeleer, totenbleich, vorschristsmäßig, amtswidrig, *blutjung, buldreich, *felsensch. In those with * the noun expresses a comparison and has often intensive force. Notice -reich, los, will have almost become suffixes.

- a. Adjectives in -felig are of double origin.
- 1. The real adjective felig, in the old sense of kindly, as in tentielig, gottielig.
- 2. selig < fal (see 500. 1) + ig: mübselig, trübselig, saumselig < Mübsal, Trübsal, etc. It does not belong here at all.
- b. A large class of adj. do not come under this head, e.g., beffartig, chracisia; many in-füddig, as monojūditg, jdwintjūditg. They are derivatives of the compound nouns beffart (< hôchvart, ch and f assimilated), Wonbjūdt, Chracis.</p>

3. PRONOUN + ADJECTIVE.

Ex .: felbftrebend, felbftgenügfam, felbftlos, etc., only with felbft-.

4. VERB + ADJECTIVE.

Ex.: wigbegierig, bentfaul; many with -wert and -wurdig: banfenowert, liebenowurdig.

5. Numeral + Adjective.

Ex.: einäugig, zweiedig, zweischneibig, erstgeboren, ei'ngeboren, only child.

6. ADVERB + ADJECTIVE.

Ex .: hochgepriefen, alt-, frifch-, neu-baden, mohlfeil, mohlgeboren.

7. PREPOSITION + ADJECTIVES.

Ex.: anheistig, einheimisch, eingeboren, native, + indorn; abhold, überslug, vo'rnehm, u'nterthan, vo'rlaut. fürlie'b does not belong here, für = as, "alo", als lieb annehmen, ansehen. Compare zufrieden, at peace, content.

Derivation of Numerals.

- 529. 3wei is probably an old dual. 3wen < zwēne has the distributive suffix ni, + Eng. twain, twin, + L. bini. With 3we fem., < older zwā, zwo, compare M. Eng. twa, two, also feminine. The numerals, as far as 10 incl., can be easily compared with the cognates of other languages according to Grimm's and Verner's Laws. clf and 3welf contain perhaps a stem lik, ten; that appears in Slavic. They come from older einlif, zuelif. cili is archaic. As to 3welf for 3welf, common in N. H. G., see 489, 1.
- 1. The ending $-\sin x < zuy + \text{Eng.}$ -ty, differs originally from \sinh in accent, $\sinh < \text{I.-E.}$ *dekm, L. decem. See Verner's Law.
- 2. Oundert, + hundred, is compounded of hund + rath-; the latter from the same stem as Merc. Go. rathjan, to count. hund alone means 100. compare L. centum, Gr. έκατόν according to Verner's Law. See further Kluge's Dict. Σαμ(επὸ < older tūsunt, a fem. noun. It is not an I-E. numeral like all the others. Root doubtful.
- 530. The suffixes for the ordinals are really the superlative suffixes -to, -sto. Only German and Icelandic use -sto. zweit- only sprang up in the 15th century. Instead of it was used, as in all Germanic dialects, and + other, a comparative in -ter. Comp. L. atter. ander has not quite died out. Comp. zum ersten, zum andern und zum britten Male, still used at auction. Und Gott! wie boch mein erster war, sind ich nicht leicht auf dieser Belt den ausend. F. 2992-3. anderthalb—one and a half; selbander—lit, himself the second,

i.e., two of them, of us. britt- has the short vowel of the stem "thriu," still in the neuter O. and M. H. G. driu. tt < dd < dj as in Go. thridja, Ags. thridda, + L. ter-ti-us. ber Dumbertste was in O. H. G. zehanzogösto, zehanzug being the other word for 100; really "ten tens." For crst, lett, wurd, see 439. 2.

Numeral Derivatives and Compounds.

531. From cardinals.

1. MULTIPLICATIVES:

Suffixes -fad, -faltig, e.g., breifad, vierfad, vierfad. In O. II. (1. -fad) is only noun. -fad expresses a certain number of parts, divisions, = "Fäder." -falt, faltig, faltig + -fold, expresses also variety besides quantity. It comes from the same stem as the verb falten + fold, and is quite old. -falt is archaic now. boppel+double, is < French. t is "excrescent"; in compounds t does not appear: Doppelabler, Doppelgänger.

zwic- in zwiefad, zwiefaltig, comes from older zwi, + Gr. di-, L. bi-.

2. ITERATIVES:

-mal, rare -flund, ci'nmal, inci'mal, brei'mal, mandmal; cinma'l, "once upon a time." -mal is the noun Mahl+meal, O. H. G. mâl. Notice "aber-mal(s)", once more, adverb "aber" = "again;" cin(mal) für allemal. "cins"; "once," is seemingly the neuter N. or Acc., but it is a Gen. < older "cines," form which cinst with excrescent t,+once, "onst." "cins" is now rare and so is "flund." Uhland has "allstu'nd" = all the time. Stund and balb are isolated now; mal is plaral, being neuter (see 176).

; wicr, now rare, comes from older zwiro, zwirôr (r < ?)

532. From the ordinals:

- 1. Adverbs like critens, sweitens, etc., see 555, 2.
- 2. FRACTIONS by -tel < Leil, Drittel, Biertel, Hünstel, one t is lost in writing, Zwanzigstel. They are neuter, of course. "Dritteil", the full form is now archaic. "Zweitel" has not come up on account of the late origin of "weite," "anderthalb" is used, see 530. Notice ber Zweitleste, next to the last; ber Drittleste, third from the end.

See also syntax, 226-229.

533. VARIATIVES are formed by -lci < M. H. G. leic, fem. meaning "kind," probably < Romance. The numeral preceding it is inflected like an adjective, manderlci (G.), viclerlei; vicrerlei, four kinds, etc. But the compound is invariable.

Derivation and Composition of Verbs.

- 534. As primitive are regarded all strong verbs except preifen, ignetion, which are foreign, and a large number of weak verbs, which are either very old, such as haben, fragen, or they are those whose origin is obscure or whose stem no longer appears in other primitive parts of speech, e,g, helen, helen. All other weak verbs are derivatives except the originally strong that have become weak, e,g, walten, maßten, beben (see KL). They are derived from other parts of speech by means of e, the connecting vowel representing older i, δ , δ , which unites, the verbal inflections with the root or with those words from which the verb is derived. (This e may drop out.) The connecting vowel i or j (< jo) produced unlant, which, since the j class was by far the largest of the three classes of weak verbs, was soon used through analogy as a common means of deriving verbs after unlant had ceased to work. Besides the vowel e, there occur certain secondary suffixes, some of which have a peculiar force.
- **535.** 1. Derivation with umlaut due, a, either to an old i or, b, to analogy, or, c, to the fact that there was an umlaut already in the noun-stem.
- a. A large number from strong verbs of the II., III., IV., V., VI. ablaut-series with the strong ablaut, i.e., with the vowel of the pret. sing., and from the reduplicating verbs with the vowel of the infinitive, e.g., flößen < flicken, fleß, gefleßen < flózzan < *flótjan, to cause to float, II.; fenfen < flicken, fauf, geflusten, < senken < *sankjan, to cause to sink, III.; gähmen + tame < zemen <*zamjan, this < zömen, IV., now a weak verb stemen; legen < liegen, lag, gelegen, < *lagjan + lay, V.; führen < fahren, fuß, gefahren < vüeren < fuorjan, VI., to cause to go, to lead; fällen < fallen, fiel, gefallen, < M. II. (1. föllen < *falljan, to cause to fall, + fell; fürdten < #furdt; lähmen < lahm; töten < te; trößen < *trôstjan < trost + trust.
- b. pflugen < Pflug, braunen < braun; gahnen < Bahn; baffen < baff! ; raumen < Raum; öffnen < offen.
 - c. grünen < grün ; trüben < trübe.
- Rem. 1. If the strong verb is intransitive then the derivative is transitive or causative; if transitive, then the derivative is intensive or iterative, e,g., fowermmen < idminimen, to cause to swim; fegen < figen, to cause to sit; beten, to pray, < bitten (t), to ask for. The same principle prevails in English: to fall to fell, to lie to lay, to drink to drench.
- Rem. 2. j (or i) has caused certain changes in the final consonants of the stems because these were doubled before the "lantverschiedung," and when doubled they shifted differently from the single consonants. For instance in weden waden, before Tah, d < kk < kj, but d < k; in d = -6i in d = -6i in, beign beign, idmitten function, between d = -6i in d = -6i

2. Derivation by c without umlaut.

These are late or if old, absence of umlaut is due to the fact that certain vowels did not suffer umlaut in certain positions or that the connecting vowel was ê or ô.

Ex.: bahnen < Bahn, sußen < Tuß, ackern < Ackern, formen < Form, altern < Alter. Older are beten < beton < beton, prayer; fassen < fazzon < fazz ; sasten < fasta; bulben < dulten < dulten. Notice the difference between: bruden, to print, brüden, to press; fransen, to be ill, fransen, to grieve; malsken, to roll, technical as in a rolling-mill, mälzen, to roll, revolve; createn, to grow cold — createn, to take cold.

- 536. Derivation by a preceded by a suffix, but a drops out after and r.
- 1. φ c n, intensive force, rare: horden, listen + hearken < hören + hear; ihnarden + snore < fidnarren.
- 2. -ein, always preceded by umlaut if attached to other verbs. It is also attached to substantives and adjectives.

It has intensive, iterative force and, from association with the nounsuffix, diminutive and hence derisive force. Numerous in N. H. G. on account of the many nouns in $-\alpha I$. Generally umlant.

Ex.: betteln + beg(?) < beten, bitten, pray, ask; bimeideln, flatter < bimeiden (care), smooth; lädeln, smile < laden + laugh; fränteln, be sickly < franten, be sick; frößeln, to feel chilly < Front; liebeln, to dally < lieben, lieb; frömmen, cant < fromm, pious; handeln, to trade < Panb.

537. 1. -nen + Eng. -n, on (rare).

Ex.: bienen, from the same stem as De- in Demut; Iernen < the same stem as Ichren; rechem < O. H. G. rechhanôn, + Ags. recenion; warnen, + warn, < same stem as wahren (?); verbammen, + condemn, also contains -n < M. H. G. verdammen, but < L. dammare. Compare zeichen < Beichen + token, regnen < Regen + rain, in which n belongs to the noun, see 502.

2. -crn, + Eng. -r, has intensive, iterative, and causative force. Rarely preceded by umlant; not unfrequent both in Eng. and German.

Ex.: alitern + Eng. glitter, < glitzen < glitzen; flimmern < flimmen; glimmern + Eng. glimmer < glimmen; flottern < L. G. stötern < stöten, + H. G.

ftoken, + Eng. stutter; zögern < zogen < zichen; sidern + Ags. sicertun, to trickle.

- a. Nouns both sg. and pl., adjectives and their comparatives in -cr have started many of these verbs, e. g., faibern, crucitern, blättern, räbern, ärgern < arg; förbern, to promote, forbern, to demand.
- 538. -icren, -iren, of Romance origin, always accented, at first only in borrowed words, and then added to German noun-stems. -cien, of similar origin, is rare.
- Ex.: Foreign words: fallieren + fail, regieren + reign, flubteren + study, bantieren, trade (rather from French hanter than from Sant, see Kluge). Monterfeien, to paint + counterfeit; gebenedeict, blessed. German stems: haufieren, peddle; nelgieren, strut; halbieren. In Goethe's Faust: irrlichtelieren.
- a. These were formed as early as M. H. G. in no small numbers, but were most numerous during the Thirty Years' War and the first half of the 18th century. Now they are excluded, except the oldest of them, from elevated style. These verbs are very numerous in the journals.
- **539.** 1. $-j \in \mathfrak{n}$, $-i \in \mathfrak{n}$, $+ \operatorname{Eng.} s$, < O. H. G. -ison. Rare both in English and German.

Ex.: grinfen, + grin, < greinen, M. H. G. grinen; graufen < O. H. G. gruwison < stem grit, G. graufam, Gräud, + gruesome. grapfen + Eng. grasp.

- a. -sen is hidden in geisen < gitson < subst. git. Compare Eng. cleanse < clean. -sen stands for -sen in gadien < yagzen, mudien M. H. G. muchzen.
- 2. s of en. This is of double origin: 1) From -sen, see 490, 1, b: berischen < hêrison < herison < herison < feil.
- 2) From -sk, L. sc, + Eng. sh, ferform < forsken; perhaps in habet < *hafskôn, if that comes from a stem haf-. For more examples, see 457. 4.
- 3. -4en < older -zzen. Has sometimes iterative and intensive force.

Ex.: busen, ibezen, ersen, to call thou, you, he; adjen < adj, to groan; leavien, to thirst, < lechen + leak; seusen < siuszen, from the same root as sauszen; solution, to sol, M. H. G. sluckzen < solution.

a. -engen in faulengen - faul, is due to the influence of L. nouns in -entia.

4. Agen. This is a secondary suffix, starting with verbs derived from adjectives in -ig (see 525), e.g., würdigen < würdig, nötigen < nötig. It was felt to be a verbal suffix, hence: endigen < Ende, freuzigen < Kreuz, reinigen < rein, huldigen < Hulb. Quite numerous.

VERB FORMATION BY MEANS OF INSEPARABLE PREFIXES, viz.:

be-, ent-, er-, ge-, ver-, 3-, zer-. Always unaccented.

540. 6 c-, b- before 1, + Eng. be-. See Bri-, **516**, 4.

- 1. B c- has lost nearly all local force of "by," "near," "around," which is felt still in behängen, cover by hanging, behöneiten, cut on all sides, to trim, but in these it approaches already its common force, which is intensive: behauen, befragen, begehren, berühren, bebeden, berufen.
- 2. It makes intransitive verbs transitive: fallen—befallen + befall; reifen (in einem Lande) ein Land bereifen, travel all over a country; fahren auf etw., but etwas befahren. This is its most frequent use.
- 3. In verbs from noun-stems it denotes "provide with," "make": beschusen, provide with shoes; beschlern, populate; beschusen + bestiend; beschusen, make sad; beschusen. Notice certain participial adjectives which have no corresponding verb, e.g., beschusen, corpulent; besagt, "full in years;" beschusen, well read; or they are isolated from the verb, e.g., bescheich, modest; beschusen, holding an office; beschusen, conditioned.
- 4. It has privative force still in benchmen, to take away; fich begeben (with G.), to give up. Compare Eng. behead and M. H. G. behoubeten, for which now enthaupten. N. H. G. behaupten strangely represents M. H. G. behauben and beheben, for which once behouben, to maintain, assert.

541. ent-, emp-before f, < O. H. G. int-. See ant-, 516, 3.

Its force is: 1. "Opposite," "in return;" in completion, recommend; complanaen, receive; entaciten, pay back, restore; see sub. 2.

- 2. Contrary, "against," privative, "away from: "entgelten, suffer for; entfagen, renounce; entbinden, deliver; entfichen, to lack (but see below); entbeden, entlaufen. From nominal stems: entgleisen, run off the track; entthronen, dethrone; entwilfern, depopulate.
- 3. "Transition into," inchoative "springing from," "out of:" entiteben, spring from, arise; enterence, to take fire, break out; entitlates, fall asleep. A quite common force.

542. $\mathfrak{e} \, \mathfrak{r}_- < 0$. H. G. ir, ar + Eng. a-, see **516**, 9.

Force : 1. "Out from," "upward": crheben, arise ; ermeden, awaken ; criericen, find out ; erfinden, to invent.

- 2. Transition into another state, inchoative like cut—: createn, grow cold; creation, bloom; createn, tremble. Many from adjectives: createn, to fall ill; createn, to become blind.
- 3. Completion and success of the action: criagen, crieffen, to obtain by hunting, by begging; very frequent. Compare Eng. arise, abide.
 - **543**. g c-, g- before l, see **516**, 7, + Eng. a-.

Force: 1. "Together" only in few verbs like: affricren, congeal; gerinnen, curdle; gefören, to belong; gefeiten, accompany; gefallen, to please.

- 2. Frequentative and intensive: getoben, gebeten, gebeten, and finally no force at all as in the past participle and in verbs like: gebethen, genichen, genichen. Numerous past part. from nominal stems, with the force of "provided with," see 540, 4: gefliefelt, in boots; geflunt, disposed; geflimt, + starry.
- **544.** $m i \mathfrak{g}_-$, + Eng. mis-, as to its force, see **516**, 8; as to its origin, **453**, 1.

Ex.: mißglüden, to fail; mißhören, to misunderstand; mißgönnen, to grudge.

545. $v \in r_-$, $i \in r_-$, $i \in ver$, far, fir, Go. fra, fr, + Eng. for-Very frequent.

- Force: 1. 'Through," to the end," intensive, "too much:" versieren, + lose, + forlorn; vergeben + forgive; veralten, grow antiquated; vergraben, hide by burying; verbergen, hide; verhindern, prevent; verschlassen, + sleep too long; versommen, to deteriorate; verblühen, sade; vergagen, despair; verssuchen, curse; versaufen, scatter; fresen, to eat (used of animals).
- 2. The opposite, the wrong, a mistake: verfausen, verbieten, versüben; verlegen + mislay, but also (sub. 1) to publish (a book); verbauen, build wrongly; sich versausen, lose the way; sich verhören, to mishear; sich vergeifen, to get hold of the wrong thing; (sich) vergeben, to misdeal (in cards).
- 3. Waste and consumption of the object: verbauen, use up in building (see sub. 4); verbaufen, waste in drinking; verbielen, lose, gamble away.
- 4. From nominal stems: "change into," "give the appearance of," bring about a certain state of," e.g., verglasen, glaze, turn into glass; vergolben, + gild; verfnödern, ossify; vergudern, cover with sugar, turn into

- sugar; verarmen, grow poor; verschlechtern, make or grow worse; verbauen (sub. 3), cover by building in front of.
- a. ver- in past participles: verwandt, related, but of the regular verb = "applied;" versämt, bashful.
- **546.** $\mathfrak{zer} \langle M. H. G. zer -, ze -, O. H. G. zur, zar, zir, + Go. tus -, + Gr. <math>\delta v\varsigma + O.$ Eng. to-breean, \mathfrak{zer} treatment of these suffixes.

Its force is: "separation," "scattering," "dissolution," "to pieces"; 3erhauen, cut to pieces; 3erglieben, dismember; 3ertrümmen, dash to pieces,

- 1. If be- and ver- precede other prefixes, separable or inseparable, the verb is always an inseparable compound. Ex.: veru'ngtüden, beci'ntrădtigen, benachtichtigen. These come from the compound nouns lingtüd, Eintracht, Nachricht. See 547. Notice the difference between bevo'rmunben < Vermunb (insep.) and bevo'rstehen < bevor + stehen (sep.).
- 2. Notice such compounds as an fersteben, a nerrichen, voran dverfündigen, in which the second prefix is inseparable. The first and second have no simple tenses in main clauses. Their past part, are ansertanten, anergegen. The pret, of the third is fündigte vorans, but the past part, is vorandverstündigt, without ge-. See 550.

Compound Verbs.

- 547. The first element is either substantive or adjective or adverb or preposition; the second is always a verb. The important questions are accent and whether the compounds are separable or inseparable, or both; whether direct or indirect.
- 1. Indirectly compounded are the verbs derived from compound substantives and adjectives. They are inseparable and have noun-accentuation, i. e., accent on the first element.
- Ex.: he'rbergen < he'rberge, inn ; ra'tfdlagen < Rat'fdlag, council; wa'll fahrten < Wallfahrt, pilgrimage ; frühstüden < Frühstüd; argwöhnen < Argwohn, suspicion ; bewillfommen < Willfemmen.
- 2. That these are not genuine compound verbs their inflection shows. The seemingly strong verbs, as in ra'sfidlagen, heiraten, etc., are not inflected strong, but weak: ratifilagte, geratifilagt; heiratete, geheiratet. Note also: handhabte, gehandhabt, not handhatte, ha'ndhabt or handgehabt.
- 3. Under this head come also: 1. Verbs of which the compound substantive or adjective is no longer common, e. y., wetterleadten < weterleich; rechtsertigen < rechtverteg; bra'nbschaufen < Brandschauf. 2. A few verbs which

seem due to analogy with the above and formed by mere juxtaposition of adjective or substantive and verb, e. g., lie'bfofen, willfahren (accent doubtful), frehlo'den, lie'baugeln, wei'sfagen (as if it were from weife and fagen, but it comes from the noun wizzago, prophet). Principal parts: liebfofen, lie'bfofen, acliebfoft; frehloden, acfrebloden, acfrebloden.

548. All the other compound verbs are directly compounded, separable and accented on the first part excepting certain propositions, see 549, which form the only genuine old compounds with accent on the stemsyllable of the verb. These and the verbs in 540-546 are the compound verbs proper with the original verb-accent.

1. Substantive + Verb.

The substantive is the object of the verb.

Ex .: fa'ttfinden, hau'dhalten, teilnehmen, banffagen, preisgeben.

NOTE.—But for the fact that in certain tenses they are written together and the substantive is now according to the "Rules" to be written without capital, these verbs are no more compounds than the corresponding Eng. to keep house, take place, give thanks. As late as early N. H. G. these and the following groups were not treated as compounds.

2. ADJECTIVE + VERB.

The adjective is generally factitive predicate, e. g., wahrnehmen, "take notice of"; totifilagen, strike dead; freispreden, declare not guilty; vell gießen, -schütten, see 549, 5.

a. A large number of compounds with substantives and adjectives occur only in certain forms, viz., in the two participles and in the infinitive used as a noun, e. g., blutstillend, pslichtvergessen, stillschaft, das Schönschreiben, das Stillschweigen.

3. Adverb or Preposition + Verb.

The adverb qualifies the verb expressing manner, direction, time. The preposition in this case has the force of an adverb. Exceptions below.

Ex .: hi'nichiden, he'rholen, na'chmachen, vorau'efeten, jufa'mmentommen, wo'hl' wollen.

- 549. Separable and inseparable compound verbs occur with burd, (hinter), über, um, unter, voll, wider, wieder.
- a. Inseparable verbs compounded with these propositions are transitive, and have the old accentuation of verb-compounds (see 421). Here belong also all verbs with hinter-, witer- and a few with voil-, c. g., veil-bri'ngen. These verbs are nearly all old, but some new ones have been

formed after them. The force of the preposition has entered into and modified the meaning of the verb, so that if the simple or separable compound verb was intransitive the inseparable compound became transitive; if transitive, the compound developed a different meaning, generally figurative, often intensive. As to haven and fein see 265.

The separable compounds have not the verb-accentuation and the force of the preposition remains literal and intact.

Very few verbs allow of both compositions.

- 1. bur d-means+"through," "thoroughly," completion of the action, "filling with," "to the end of a fixed limit of time," bu'rdybringen, crowd through, penetrate, carry to a successful issue, e.g., die Augel ift burdyebrungen, the ball went through. Trans.: Die Augel hat das Brett burdybru'ngen, the ball penetrated the board; "von dem Gefühle feines Nichts durdybru'ngen." In "Die A. ift durch das Brett gebrungen" there is no compound. Du'rdyfchauen, look through, etwas durchfchau'en, see through, understand thoroughly; durch-ta'men, to spend in dancing, du'rdytamen, to dance through, to pass through dancing; du'rdyfchen, to look through (a hole), hurriedly through a book; the inseparable durchfchen is obsolete, it would have the force of durchfoau'en, to understand thoroughly.
- 2. hinter, + behind. Separable compounds with hinter do not really occur in good style. In hi'ntergichen, -bringen it stands for hinunter = pour down, swallow. The inseparable compounds are always figurative and transitive, its force is the opposite of straight, "deceptive": hinterge'ha, deceive; hinterreiten, to prevent, circumvent; hi'ntergehen would mean the more usual hinterbe'r or hintena'nachen, to walk behind.
- 3. \ddot{u} b er = a) separable: over, beyond, across = himüber; b) in close compounds: transfer, covering, a missing, figurative sense, extent of a certain limit of time.
 - a. ü'berseben, cross, take across (a river); ü'bergeben, go over.
- b. übergie'hen, cover with; überna'dien, spend the night; überfdrei'ben, head a column or chapter; überhö'ren, not to hear; überle'gen, consider; ü'berfdlagen, = u'mfdlagen, tip, turn over; but überfdla'gen, calculate (expenses); überfe'hen, to translate; überge'ben, pass over, skip; überfe'ben, overlook.
- 4. um. a. separable = around, about, again or over, upside down, change of place, loss of something, failure.

Ex.: u'mhängen (einen Mautel), put on, (ein Bith) change the place of a picture; u'mlaufen, overthrow by running; u'mfleiden, change clothing; u'mfehren, turn back; u'mfommen (viz., um'd Leben), perish, u'mbringen, take the life of; sich u'mgegen, take a roundabout course.

- b. inseparable: literally denotes the encircling of an object, figuratively it has the force of hinter, deception: una men, embrace; unifolife, sail around, double; unifeiten, cover, drape; unagen, avoid, deceive,
- 5. unter, separable: under, down, among (with): u'nterhalten, hold under, down; u'nterbringen, provide for (figurative); u'ntergehen, go down, set,

Inseparable, figurative sense: unterha'(ten, entertain; unterha'gen (Dat.), forbid; fid) unterhe'hen, make bold; unterne'hmen, undertake; unterha'ffen, leave undone; unterha'gen, to be overcome by.

- 6. voll, separable: + full, always literally with verbs denoting pouring, filling and similar ones: vollbringen, vollgießen, vollführten (cin Θεβάβ), bring, pour a vessel full. Inseparable: "to the end," accomplishment; vollführen, vollbringen, execute; vollc'nben, finish, compare Eng. fulfil; vollfo'mmen (part.), perfect.
- 7. wiber in the sense of "against" is always inseparable and unaccented, generally figurative sense: wiberfeigen, refute; wiberfireben (with Dative), resist; wiberfireben, contradict (also Dat.); wiberfireben, to resist.
- 8. wieber, separable: "again," "back": wieberholen, fetch back; wiebergeben, give back; wiebergagen, say again. Very loose compounds. Inseparable: figurative sense only in wieberhollen, repeat; wiberhollen, wiberfdeinen, wieberfdeinen, wieberhollen; usage is unsettled in these.
 - a. The difference in the spelling witer-wieter is quite modern.
- 550. Separable and inseparable composition with these adverbs is quite old, but in O. H. G. probably no distinction was made in force or meaning. Even now "Tw staget but has Vert hurdern'agen" and "cient fit hard has Vert herefungen" amount to quite the same thing. In fact separable composition is no real composition. Many still write the prefixes separately before the verb where any other adverb would stand. In M. H. G. the great majority of our modern separable compounds are not felt at all as compounds. Two things have brought about this feeling that they are such:
- 1. The substantives compounded with the same element as the verb, e.g., Umana, Du'rhjahrt, A'bbruch, have lead us to associate um and gehen, burch and fahren, ab and brechen.
- 2. When a meaning different from the literal or common one was developed, verb and adverb were felt as belonging together, e.g., chwas bu'rdjicken, to carry something through, to the end; veridiagen, to propose; nadjidiagen, to look up a reference, etc.
- a. Very often there is no difference in meaning, but only in construction, between the simple verb ' preposition and the close compound, e. g., 1, Das Pferd ist idented Graben geserungen, = "The horse has jumped over the ditch," and, 2, bas Pferd batter Graben übersprungen, The horse has jumped the ditch. In 2, perhaps the act of the leap is emphasized, it did not swim across; in 1, the extent of the leap. But compare

also the other, not literal meaning of überspri'ngen, viz., to skip, omit, in : Der Reisenbe hat einen Posten übersprungen, the traveller has skipped one item. Der R. ist über ben Posten gesprungen would be meaningless.

Derivation of Adverbs.

The adverbs are derived from pronominal stems and from nonn-stems.

551. The two suffixes on and or, < older an(a), ar(a), are attached to the stems.

ADVERBS FROM PRONOMINAL STEMS.

- 1. From the stem of the demonstrative pronoun:
- a. From the stem ta-tha: bar, ba + there, bann + then and benn, conj. "for," this double form is M. H. G., but the difference in meaning was only established as late as the 18th century, < older danne, denne, which have not been explained yet. Dannen < dannana stands only in "ven bannen", hence. Defte, see **442**, a; bert < darôt; beth + though (?).
- b. From the stem hi: for + hither; fin, away; fir + here; finnen, in von finnen, hence. Sinten, feute, feint, bener, see 443, 2.
 - 2. From the stem of the interrogative pronoun:

wann + when, wan, if; wer-, we + where $< w\hat{a}$, $w\hat{a}r$; wen wannen + whence is rare. For wic + how + why, see **444**, 1. Baru'm $< w\hat{a}r$ + units or wara + units (?).

3. From the stem swet-: fo + so; fant, infammen (?), fender, als, alse, soust, sust, sust. From various stems: even, + above: unten, unter, + under; nid (rare), nicken + boneath; nun + now; außen, außer; innen, inner.

552. Adverbs from Noun-stems.

These adverbs are always cases of nouns, the Genitive being the most frequent. See 187.

- * 1. Genitive: abende, morgene, nachte, teile, fluge, berweil, bermafen, nichte, e was looked upon as an adverbial ending and added to fem. nouns and even to other cases and whole adverbial phrases, c.g., -jeite in many compounds: bie'efeite, met'nerfeite, allerbi'nge (really a (1, pl.), vo'rmale, unterwe'ge, c'hemale, allerwe'gen. Compare Eng. needs, now-a-days, always, sometimes.
 - 2. Dative : jumei'len, mitten, halben, traun (?), morgen (sg. ?), abha'nben, vor-

ha'nben, sufoige, anflatt. Compare Eng. to-morrow, o'clock, a year < on (in) the year, a day < on (in) the day, because, asleep, whilem.

3. Accusative: weg (8) + away; heim + home; mal, once; bieweil, + while; überhaupt, je, nic.

-meift following at first only after a Gen., later the uninflected noun: awangeweift, by force, ausnahmeweift, exceptionally, studietist, piecemeal. Compare Eng. nowise, otherwise, the while.

4. Instrumental: heuer, this year < hinjaru; heute, to-day < hintagu; heint < hinaht (a Dat.?). See 443, 2.

553. Derivation by suffix: -lings and -warts.

- 1. -ling& comes from the G. of nouns in -ling and is a late formation: rüdling&, backward; blinbling&, blinbly. Compare Eng. sideling, headlong.
- 2. -warts + ward is really the G. of an adjective wert, wart. It is very common after prepositions: heimwarts, homeward; washwarts, towards the forest; alwarts, downward, aside; verwarts + forward.

ADVERBS FROM ADJECTIVES.

554. Almost all adjectives can be used as adverbs.

Adverbs with a suffix:

- 1. -e, this is now rare but once very frequent < older -o, which was probably the A. sg. fem.: gern(e), fern(e), balbe in Goethe's "Warte nur, balbe Rubelt by auch."
- a. Remark here the doublets fast soft, soften soften, frus (rare), soften frus (rare), soften adverbs from jo-stems. Those with unlaut are adjectives used as adverbs. In trage, bose, etc., e does not go back to —o, but O. H. G. i < jo, since they are adjectives (jo-stems) used as adverbs and not transformed into adverbs.
- 2. If ind + -ly, is really no adverbial suffix, but the adjective suffix to which the adverbial c (< 0) was added, -liche, -liho: treating treat truly, faithfully; wahrling wahr, guitting gut, freiling, to be sure, frei; bitterling adjective bitter.
- a. The corresponding adjective in -lid is perhaps no longer in use. Compare freilid, to be sure frei + free.
- b. -[id] has also been added to other stems: cinfdlicflid, peffentlid, wilfentlid.

555. Adverbs, cases of adjectives.

Genitive: 1. rechte, linte, cilende, vergebene, ficte + steadily.

- 2. -cu & from superlatives and ordinals: critene, höchstene, meistene, britetene. -cu contains the inflection -cu of the adjective.
- a. Genitive with excrescent t. Such are felt as superlatives: jingft, längft, ncbft; cinft (?), but in O.H.G. are doublets cinest and cines. Compare Eng. once < *anes* and dial. "onst"; also amidst, amongst, dial. "acrost." Pure Gen. in Eng. else < elles, unawares, etc.

Rem. The above explanation is rejected by Lever in Grimm's Dict.

- 3. Datice. It is hidden in par < zevare, lit. "for true," to be sure. Eingeln, singly < einzel by suffix -il from ein(az) < ein; adj. cingeln-cr. In adverbial phrases: am leideteften am foönfien. In M. H. G. this Dative was very frequent, c, g., in -lichen, -lingen, etc.
- Accusative, also in the comparative and superlative degrees: menig, wiel, genug, mehr, meißt, besier, bödit, möglichi. In adverbial phrases: insbesierer, fürwahr, auf d reinste, schönste. See 300, 2.
- a. Note also those preceded by prepositions: ancen, + at last, neven (< enchen), angleich, at the same time, fürba'ğ or fü'rbağ, farther.

Prepositions and Conjunctions have the same origin as the adverbs, being originally adverbs.

Three classes of words may be comprised under the head of Particles.

Prepositions.

- 556. 1. As old and simple prepositions may be regarded: ab, an, auf, auc, bei, ver and für (doublets), burd, gegen (+ again), in, mit, ob, 3u, um (< umbe).
- 2. Derived by suffixes: -cr, -ter, mostly from pronominal stems and from the older forms ar, dar, tar, which are probably all three comparative suffixes: über, unter, binter, wieter, außer. See 551, 3.
- 3. A number of nouns and adjectives in the various cases: fraft, unweit, während, mittels (mittelft), flatt, länges, trop, balben, wegen, willen, nådifinebit, laut, nach, zwischen.
- a. The number of prepositions governing the Gen. is really difficult to state, because, like many of the above and many others, they are really nouns with a G. dependent upon them, viz., swedd, behuid, betreffd, feitend, etc.

- 557. Compound Prepositions are generally adverbs, but the following may be classed here:
- 1. Preposition (or adverb) + preposition or adverb: binnen < bi + innen, bis < bi + az (az + Eng. at), neben < en + eben. sumider; entge'gen < en + gegen (t excrescent,) etc.
- 2. Noun + noun, or prep. + noun, or pronoun + noun: zusisige, several in -bate and -seit: außerhalb, jenseit, austat.

Conjunctions.

- 558. 1. From pronominal stems: For ba, benn, fo, wenn, wie, and others, see among adverbs, 551. Aber, auch, unb, ober, fondern, weber, show suffixes.
- 2. From nouns and adjectives: falls, gleids, ungradiet, weil, wahrens, and others.
- 3. Compounds: adverb and preposition: bever, fobalb, mithin, femil, baber, barum, and others.
- 4. Preposition or adverb + pronoun or adjective: indem, seithem, setas, als das, assen, entweder < ein- de- weder, one of two; nidodestowenian, nevertheless.

Interjections.

559. Interjections proper.

- 1. Joy is expressed by: ah, o, hei, judhe, heifa, hurrah. Surprise: ci. peh, ha. Pain by: ch, webe, au, ad, hu. Disgust: pfui, fi, bab. Doubt but hem, hum. Commands to be silent are: pft, bft, fd; to stop or pay attention; brrr (to horses), beba, he, he, bella, hallob.
- 2. Imitations of sounds in nature: plumpd (fall), piff, paff, puff (shot), hui (whizz), banh (fall), muh (cow), mian (cat), wan (dog), hopfa (stumble), bum bum (drum).
 - 3. Burdens of songs : Dubelbumbei, Juvivallera, fdrum fdrum -- idrum.
- 560. Certain regular words which have become exclamations, often oaths in much changed forms: Salt, Wetter, Donner und Bligen, Poptantiud, Seil, Brave, O je, O jemine, Sapperment, Saferlot, Mein himmel, Donnerwetter noch einmal.

LIST OF ABBREVIATIONS AND SYMBOLS THAT REQUIRE EXPLANATIONS.

Ags. = Anglo-Saxon. L. G. = Low German $(B_n) = Bible$ (Lu.) = Luther's works excepting (Bo.) :: Bodenstedt. his translation of the Bible (Bü.) = Bürger. M. G. = Middle German. $f(h_i) = Chamisso.$ M. H. G. :: Middle High German. D = Dutch or Dative. N. G. = North German or North (F.) = Hart's Edition of Goethe's Germany. Faust, Part I. N. H. G. = New High German. Er ... French. O. Fr. . Old French. (G.) : Goethe. O. H. G. - Old High German. Go. = Gothic. (Prov.) = Proverb. Gr = Greek. (R.) = Rückert. G. T. : General Teutonic. Rules = the official rules for spell (II, and D.) == Hart's edition of ing, see 37. Goethe's Hermann and Dorothea. (Sch.) - Schiller. (He.) = Herder. S. G. South German. ll, G. = High German. (Sh.) Shakespere translated by (Hu.) - A. von Humboldt. Schlegel and Tieck. (Uh.) = Uhland. I. E. =: Indo-European. L. Latin. V. L. : Vulgar Latin.

- means "derived from," "sprung from," "taken from."
- ... means "passed or developed into," " taken into."

(Le.) = Lessing.

- t between a German and non-German word denotes common origin or "cognates." In other positions it means "accompanied or followed by."
- before a word means that that form of the word does not actually occur, but is conjectured or reconstructed.
 - : -= :, or : as :, means a relation as in a mathematical proportion.
 - 1. II, III after verbs indicates the strong verb classes.
- between letters means "interchanges with," e.g., h—d) as in hoher—hod or c—i as in normen—nimmit.

SUBJECT-INDEX.

The numbers refer to the paragraphs. The umlants have a separate place, à after a, ö after v. ü after u.

Ablaut: nature of, 393; four grades,

394, 463, 2; 496; 497. Ablant series: and verb-classes, 123-129; I.-E., 394, 1; G. T., > O. H. G. > N. H. G., 395-400; 459-167; grouping of, 459.

Abstract nouns: article before, 149; no article, 145; 155, 2; plural of, 171;

Accent: 417, 418: degrees of, 419: chief on stem-syllable, 420; 420, 2; 478, 4; Eng. in Norman-Fr. words, 420, 3; in compounds, 421-423; secondary, 424; rhetorical, 426; "frec" in I.-E., 420, 2; in foreign words, 427, 420, 1; 424, 4; 493, 2; 63, 2; characteristic of Germanic Lang., 478, 4; =intonation, 392, 1. Accidence: 38-138; Historical Commen-

tary on, 428-476.

Accusative: office of, 198; after verbs, 198-206; two A. after verbs, 199; predicate in passive, 202, 2; cognate, 203; logical subject in, 205; after reflexive verbs, 206; adverbial, 207; difference between A. and G. of time, 208, 1; after adjectives, 207, 1; 183; abso-Inte, 209; 297, 1; by attraction in the pred. after laffen, 202, 1; after prepos.. 304-306; with Inf., 292.

Adjective: decl. of, 69-72; 436; origin of strong decl., 437; comparison of, 73-76, see comparison, compar. and superlat.; 438, 439; used as nouns, 220, 221, 181; gender of same, 160, 3; 169; 162, 3; G. after, 182, 183; D. after, 194; A. after, 183; 207, 1.

Attributive use of, 211-217; only used attributively, 211; uninflected used attributively, 212; in the predicate, 218, 220; as nouns declined strong 214; G. sg. m. and n., 216, 1; declined weak, 213; 217, 1; as nouns, 221, 1; origin of double decl., 215; unsettled usage as to strong and weak decl., 216, 221; after indef. pron., 214; 216, 4; 181; after person. pron., 216, 2: two or more adj., 212, 3: 217. In the predicate, 218, 219; only used

in pred., 219; position of adjuncts of, 353; accent in certain compounds,

422, 1-7; derivation of, 522-528: used as adverb, 554.

Adjective Clauses: nature of, 323; 326-

328; 339,

Adverbial Clauses: nature of, 323, 329; various kinds of, 330-340; see temporal, local, clauses of manner and cause (332-340), final (338), conditional. (340), etc.

Adverbs: origin of, 551-555; < G, of nouns, 187, 552; +prepos. supplanting the person, pron., 234; syntax of, 299. 300; after prepos. + nonn, 300; adverbs which are only adverbs, 300, 1; 554, 2; adjective as, 300, 2; 551; comparison by, 223, 224; relative and absolute superl. of, 300, 2; nature of, 301, 1; interrogative, 251, 5; relative. 258, 326, 331; demonstrative, 327, 3; in local clauses, 331, a; position in a sentence, 354; order of adverbs of time, place, manner, 355; accent in compound, 423.

Adversative Sentences: coordinate, 320.

Affricate: 413, 5; 408, 1.

Alemanic: 483, 1.

Alphabet: printed and script, 1, 2; origin of the G. letters, 360: Latin letters in G., 360, 2; relation to G. sounds. 361.

Anglo-Saxon, see English.

Apposition: < G. of nouns, 181:179.

Word-steel: 100-402.

Word-stock: 192-494.

WORD-INDEX AND GERMAN-ENGLISH VOCABULARY.

The first contains a list of the German and English words, prefixes and suffixes specially treated in the grammar. Also the strong and irregular verbs with the principal parts, and the second or third pers. sing. of the pres. ind. and the imperative sing., if they are at all peculiar.

The umlants have a separate place, à after a, è after e, û after n.

The numbers refer to the paragraphs. I., II., III., etc., mean the strong verb-classes and ablant series.

After the substantives the gender (m_*, n_*, f_*) and the plural ending are always indicated of the strong nouns, the gender and a_* (weak) are given after the weak nouns. When there is no pl. sign at all, it is indicated by -. When the cognate Eng. word is rare, or when its meaning differs quite widely from the German word, it is placed after the common Eng. meaning.

The vocabulary is meant to cover all untranslated single words and illustrative sentences as far as § 147, except the foreign words 62, 3: 63, 2; 64.

If weak verbs must have the connecting vowel this is indicated by the preterit, - after a word means a prefix in composition, before a word it means a suffix.

N.

a, pronunc. of, 3; description of, 371, 1; quantity of, before r, rt, rt, 33, 488, 2; in ablants., VI., 459, 4; in ablants. I.-V., 459. a, in Engl. phrase "so much a pound," 156. Mas, n., pl. APPENDIX.

- I. FULLER INFLECTIONS FOR PART I., SECTION 1.
- II. Alphabetical List of Strong and Irregular Verbs.

DECLENSION OF NOUNS.

1. Strong Declension.

Characteristics: the G. sing. ends in -es or -s. Upon the four ways of forming the plural the division into classes is based.

- 2. I. Class. Characteristics: no suffix in the pl., but there may be umlaut of the stem-vowel.
 - a. No umlaut.

A. die Garten

Masc.	ber -	Hebel, the lever	NEUT. das S	Bunder, the wonder
Sing.	N.	ber Hebel	Sing. N.	das Wunder
	G.	bes Hebels	G.	des Wunders
	D.	dem Hebel	D.	dem Wunder
	A.	ben Hebel	Λ.	das Wunder
Plu.	N.	die Hebel	Plu. N.	die Wunder
	G.	der Hebel	G.	der Wunder
	D.	den Hebeln	D.	den Wundern
	A.	die Hebel	Λ.	die Wunder
b.	Wit	h umlaut.		
M	ASC.	der Garten, the garden	MASC.	der Bruder, the brother
Sing.	N.	ber Garten	Sing. N.	der Bruder
	G.	des Gartens	G.	des Bruders
7	D.	bem Garten	D.	dem Bruder
	A.	ben Garten	A.	den Bruder
Plu.	N.	die Gärten	Plu. N.	die Brüder
	G.	der Gärten	G.	der Brüder
	D.	ben Gärten	D.	den Brüdern

A. die Brüder

FEM.	bie	Lochter, the daughter	NEUT. das	Riofter, the cloister
Sing.	N.	die Tochter	Sing. N.	das Kloster
	G.	der Tochter	G.	des Klofters
•	D.	der Tochter	D.	dem Kloster
	A.	die Tochter	A.	das Kloster
Plu.	N.	die Töchter	Plu. N.	die Klöster
	G.	der Töchter	G.	der Klöster
	D.	den Töchtern	D.	den Klöstern
	A.	die Töchter	A.	die Alöster

3. II. Class. Characteristics: the plural ends in -e, but there is no umlaut of the stem-vowel.

M.	asc. b	er Pfad, the path	Neur. das A	renz, the cross
Sing.	N.	der Pfad	Sing. N.	das Areuz
	G.	bes Pfabes	G.	des Kreuzes
	D.	bem Pfabe	D.	dem Kreuze
	A.	den Pfad	A.	das Areuz
Pm.	N.	die Pfade	Plu. N.	die Kreuze
	G.	ber Pfade	G.	der Kreuze
	D.	ben Pfaben	D.	den Kreuzen
	A.	die Pfade	Λ.	die Areuze
Neu	т. дая	Thor, the gate	Fem. die Fin	sternis, the darkness
Sing.	N.	das Thor	Sing. N.	die Finsternis
	G.	des Thores	G.	ber Finsternis
	D.	dem Thore	D.	der Finsternis
	A.	das Thor	Α.	die Finsternis
Plu.	N.	die Thore	Plu. N.	die Finsternisse
	G.	der Thore	G.	der Finsternisse
	D.	den Thoren	D.	ben Finfterniffen
				die Finsternisse

4. III. CLASS. Characteristics: the plural ends in -e and the stem-vowel has the umlaut.

Masc. der	Sohn, the son	Fem. die Fa	ust, the fist
Sing. N.	der Sohn	Sing. N.	die Faust
G.	des Sohnes	G.	der Faust
D.	dem Sohne	D.	der Faust
A.	ben Sohn	A.	die Faust
Plu. N.	die Söhne	Plu. N.	die Fäuste
G.	der Söhne	G.	der Fäuste
D.	den Söhnen	D.	den Fäusten
A.	die Söhne	Λ.	die Fäuste
Fem. die	Stadt, the city	FRM. bie	Runft, the art
Sing. N.	die Stadt	Sing. N.	die Runft
G.	der Stadt	G.	der Kunft
D.	der Stadt	D.	der Runft
A.	die Stadt	A.	die Runst
Plu. N.	die Städte	Plu. N.	die Künste
G.	der Städte	G.	der Rünste
D.	den Städten	D.	den Rünften
A.	die Städte	A.	die Rünste

5. IV. Class. Characteristics: the plural ends in -er and the stem-vowel has the umlaut. But nouns ending in -tum have the umlaut in this suffix, because they were originally compound nouns in which the last noun only is inflected.

Mas	c. der	Bald, the forest	NEUT. das E	Slatt, the leaf
Sing.		ber Wald	•	das Blatt
	G.	bes Walbes		des Blattes
*	D.	dem Walde		dem Blatte
	A,	den Wald	A.	das Blatt
Plu.	N.	die Wälder		die Blätter
	G.	der Wälder		der Blätter
	D.	ben Wälbern		den Blättern
		die Wälder	A.	die Blätter

NEUT. das Herzogthum, the duchy

Sing. N. bas Herzogtum

G. bes Herzogtums

D. bem Herzogtum (e)

A. das Herzogtum

Plu. N. bie Berzogtümer

G. ber Herzogtümer

D. ben Bergogtümern

A. die Berzogtümer

6. Weak Declension.

Characteristics: Masc. nouns have -cn or -n in every case and number except in the N. sing. Fem. nouns have this ending in the plural only.

	_	•

Infinitives.

Present. Ausgehen, to go
out

Past. ausgegangen sein,
to have gone
out

Participles.

Present. ausgehend, going out.
Past. ausgegangen, gone out.

II. ALPHABETICAL LIST OF STRONG AND IRREGULAR VERBS

Remarks. — The principal parts are put in full-faced type. The second and third persons singular of the present indicative are given when the stem-vowel is i, ie, or an umlaut; also when the connecting vowel e is required, though not absolutely, in verbs whose stem ends in b, t, ß, ff, ſt. (See § 118.) The second person singular of the imperative is given when it has the short form without e, stem-vowel i or ie; also when the e is optional. A dash indicates weak or regular forms. Forms in parentheses are rare and archaic, for which the weak ones are in use now. Of the modal auxiliaries and wiffen the whole present indicative singular and the first person plural are given. Compound verbs are given only when the simple verb has passed from present use, e. g., befeblen, gebären. English verbs in small caps are cognates of the German verbs, i. e., they have the same origin and meaning.

Infinitive.	2. and 3. p. s. pres. ind.	2. p. s. imp.	Pret, ind.	Pret. subj.	Past part.
Baden,1 BAKE	bädft, bädt		but	biite	gebaden
Befehlen, command	befiehlst, befiehlt	befiehl	befahl	befähle beföhle	befohlen
Befleißen, apply (refl.)	befleißest, befleißt	befleiß(e)	befliß	befliffe	befliffen
Beginnen, BEGIN		_	begann	begänne begönne	begonnen
Beigen, BITE	beißeft, beißt	beiß(e)	biß	biffe	gebiffen
Bellen,2 bark	biuft, biut	bill	boll	bölle	gebollen
Bergen, bide	birgst, birgt	birg	barg	bärge bürge	geborgen
Berften,1 burst	birfleft, birft	birst	barft bor jt	bärfte börfte	geborften
Bewegen, s induce			bewag	bewöge	bewagen
Biegen, bend	(beugft, beugt	beug)	bog	böge	gebogen

¹ Frequently weak, except in the past part. ² Now generally weak. ³ Weak except in this figurative sense.

Infinitive.	2. and 3. p. s. pres. ind.	2. p. s. imp.	Pret.	Pret. subj.	Past part.

Empfehlen, recommend	empfiehlft, empfiehlt	empfiehl	empfahl	empfähle empföhle	empfohlen
Cijen, eat	iffest, ift	iβ	aß	äße	gegeffen
Fahen, archaie for fangen					
Fahren, go, FARE	fährst, fährt	fahr(e)	juhr	führe	gefahren
Fallen, FALL	fäust, fäut		fiel	fiele	gefallen
Falten,4 FOLD	falteft, faltet				gefalten
Fangen, eatch	fängft, fängt		fing (fieng	finge fienge)	gefangen
Fecten, FIGHT	fichteft,5 ficht 5	ficht 5	foфt	föchte	gefachten
Finden, FIND	finbeft, finbet		faud	fänbe	gefunden
Flechten, twine	flichft,5 flicht 5	flicht 5	flocht	flöchte	geflochten
Fliegen, FLY	(fleugft, fleugt	fleug)	pog	flöge	geflagen
Fliehen, FLEE	(fleuchft, fleucht	(leuch)	floh	flöhe	geflohen

¹ Weak when transitive; sometimes even when intransitive. ² Sometimes weak, except in the past part. ³ Still frequently weak. ⁴ Now entirely weak, except in the past part. ⁵ The weak forms also occur.

Infinitive.	2. and 3. p. s. pres. ind.	2. p. s. imp.	Pret. ind.	Pret. subj.	Past part.
Fliefen, flow	(fleußest, fleußt	fleuß)	floß	flösse	gefloffen
Fragen, ask	frägft, frägt		frng	frilge	gefragt1
Freffen, EAT (of animal	s) friffeft, frißt	friß	fraß	fräße	gefreffen
Frieren, FREEZE			fror	fröre	gefroren
Gä(h)ren, ferment	(gierft, giert)		gohr 2	göhre	gegohren 2
Gehären, BEAR	(gebierft, gebiert	gebier)	gebar	gebärc	geboren
Geben, GIVE	giebst, giebt gibst, gibt	gieb gib	gab	gäbe	gegeben
Gedeihen, thrivo			gebieh	gediehe	gediehen
Gehen, Go			ging (gieng	ginge gienge)	gegangen
Gelingen, succeed			gelang	gclänge	gelungen
Gelten, be worth	giltst, gilt	gilt	galt	gälte gölte	gegolten
Genesen, recover	genefeft, geneft		genas	genäfe	genejen
Genießen, enjoy	(geneußeft, geneußt	gencuß)	genoß	genöffe	genoffen
Geichehen, happen	gefdiehft, gefdieht	(wanting)	geichah	geschähe	geichehen
Gewinnen, W'N		-	gewann	gewänne gewönne	gewonnen
Giegen, pour	(geußeft, geußt	geuß)	goß	göffe	gegoffen
Gleichen,3 resemble	-		gliğ	gliche	geglichen
Gleißen, GLITTER	gleißest, gleißt		(gliß	gliffe	gegliffen)
Gleiten,4 GLIDE	gleiteft, gleitet		glitt	glitte	geglitten
Glimmen, GLEAM			glomm	glömme	eglommen
Graben, dig	gräbst, gräbt		grub	grübe	gegraben
Greifen, GRIPE, grasp			griff	griffe	gegriffen
Saben, HAVE	hast, hat		hatte	hätte	gehabt
Hold	hältft, hält	halt(e)	hielt	hielte	gehalten
Pangen, HANG	hängft, hängt ⁵		hing hieng	hinge hienge	gehangen
Hauen, HEW			hieb	hiebe	gehauen
Heben, raise			hob hub	höbe hübe	gehab n

¹ Always weak, and the other forms are properly weak. ² Also weak, especially in figurative sense. ³ Usually weak when transitive, make Like. ⁴ Weak forms sometimes occur. ⁵ hangit, hangt also occur. Often confounded with the weak and transitive hangen.

Infinitive.	2. and 3. p. s. pres. ind.	2. p. s. imp.	Pret, ind.	Pret, subj.	Past part.
Beißen, call	heißest, heißt		hieß	hicke	geheißen
Şelfen, nelle	hilfst, hilft	hilf	halj	hälfe hülfe	geholfen
Jagen, 1 hunt	(jägft, jägt)		(jug	jüge)	gejagt
Reifen,2 chide	-		tiff	tiffe	getiffen
Rennen, Know			tannte	tennte	gefannt
Ricfen, see Rüren					
Alieben, CLEAVE, split	-		flob	flöbe	gefloben
Mlimmen,3 CLIMB			flomm	flömme	geflommen
Alingen, sound			tlang	klänge klänge	geflungen
Uneifen,4 pinch	and the state of t		fniff	tniffe	gefniffen
Sincipen,2 pinch			(fnipp	t nippe	gefnippen)
Ronamen, COME	(fömmft, fömmt)	fomm(c)	fam	fäme	gefommen
Können, CAN	fann, fannjt, fann, tönnen	(wanting)	founte	tönnte	gefonut
Kreifcen,5 seream	freischest, freischt		frish	trische	gefrischen
Ariechen, creep	(frenchji, frencht	trend)	tron	tröche	getrochen
Müren, choose	manage actions		for	före	geforen
Laden, a LOAD, invite	lädft, lädt		lud	lübe	geladen
Laffen, LET	läffest, läßt	laÿ(c)	lief;	ließe	getaifen
Laufen, run	läufit, läuft		lief	liefe	gelaufen
Leiden, suffer	leidest, leibet		litt	litte	gelitten
Leihen, LEND	and a second		lich	liche	gelichen
Vejen, read	liefest, lieft	lics	las	läfe	gelejen
Liegen, LIE		-	lag	läge	gelegen
Yöjden,⁴ go out	lifcheft, lifcht	Lifeh	lojm	lösche	gelojden
Lügen, tell a LIE	(lengst, lengt	leng)	log	löge	gelogen
Mahlenys grind	(mählft, mählt)		(muhl	mühle)	gemahlen
Meiden, shun	meibeft, meibet		micd	miebe	gemieden

¹ The strong forms, except perhaps jug, are colloquial. ² Usually weak. ³ Weak forms sometimes occur. ⁴ Sometimes weak. ⁵ Now usually weak. ⁶ Also weak. Two verbs are hopelessly confounded in this one, viz., Iaben, Load, once always strong, and Iaben, invite, once always weak. ⁷ When transitive, quench, weak. ⁸ Usually weak, except in the past part.

Infinitive.	2. and 3. p. s. pres. ind.	2. p. s. imp.	Pret. ind.	Pret. subj.	Past part
